Ne glow, moving striations, effect of standing stratification 3=9754
Ne glow, positive ion prodn. by Penning mechanism 3=7474
Ne, glow, pulsed, oscill. in spectral line intensities 3=12210
Ne, glow, radiation temp. 1=2978
Ne, glows, positive column instability in mag. field 1=284
Ne, glows, striation production 0=2336, 5292
Ne, glows, striations, Ne_2^+ formation 0=10890
Ne, high-frequency, striations 4=474

Discharges, electric—contd
- Ne, hot cathode, moving striations, image converter meas. 4=11544
- Ne, l.p. constricted, plasma temp., electron conc. 1=13092
- Ne, low-pressure, with positive column, periodic structure 4=18739
- Ne, moving striations, negative sections 0=19637
- Ne, negative striations. 1=8314
- Ne, plasma, temp. and electron density meas. 1=313
- Ne, positive column constriction 3=14549
- Ne, positive column, elec. and optical props. 3=24238
- Ne, positive column, electron energy distrib. function 2=168, 19909
- Ne, positive column, h. f. cond., electron density and temp. 4=5575
- Ne, positive column study, at low current 1=4581
- Ne, preconduction current pulses, at low press. and audio freq. 0=1105
- Ne, probe noise in various regions 3=14550
- Ne, pulsed d.c. excitation, afterglow 4=14597
- Ne, pulsed discharge, afterglow dependence on density 1=4576
- Ne, pulsed, electron temp. and particle concn. 2=165
- Ne, under pulsed h.f. field, striation waves 0=10889
- Ne, stationary and moving stratification 4=8646
- Ne, striation waves rel. to stimulated running striations 3=19191
- Ne, striations, radiation effects 0=2334
- Ne, wave of stratification, striations 2=7574
- Ne—Ar, with Hg, resonance radiation meas. 4=21475
- Ne—Ar, pulsed microwave, formative processes 3=14537
- Ne-Ar, use in particle track visualization 2=5559
- Ne—H_2 mixtures, low press., striations 4=16448
- O, glow, ion masses, O_2^+, O^-, O_3^- 3=19183
- O, luminescent, spontaneous voltage oscillations rel. to positive column length 2=7590
- O, positive column fields, 10^{-5}-10^{-2} A 3=19213
- oxygen, positive column, low-gradient form, connection with moving striations 1=16285
- O, positive column oscills., freq. var. with dimensions, voltage 4=8650
- O recombination, in elec. discharges, role of excited molecules 4=21464
- O, spectral line intensities, oscillation 4=14651
- O_2 afterglow, electron removal 3=4064
- O_2, atom concn., e. s. r. meas. 2=3792
- O_2, electrodeless, electron mobility meas., effect of uniform mag. field 0=7094
- O_2, energy absorption and emission by O_2^- 2=5306
- O_2, glow, stratified, negative ion extraction 3=4063
- O_2, glow, two forms, differences 4=2958
- O_2, glows, ion emission, mass spectrometer study 0=9005
- O_2^+, hollow cathode, spectrum, and aurora 4=22366
- O_2, microwave, molec. dissociation, catalytic effects of foreign gases 0=7737
- O_2, O atom conc., time depend. 2=2332
- O_2-N_2 mixtures, electron loss study 2=5301
- O_2—N_2—Ar, forbidden auroral radiation 4=18708
- O_2 and O_2—N_2 afterglows, free electron attachment 3=4009
- O_3 production in silent discharge, surface effects 4=17860
- OH radical production in microwave discharge 2=6232
- SF_6, Townsend, ion identification and mobility, by time-of-flight mass spectrometry 3=16905
- Si p—n barrier layers, avalanches, on particle irrad. 4=12932
- tellurium vapour pr. method of meas. 1=2913
- Xe containing N_2 and Ba, afterglow mechanism 2=3753
- Xe, density and temp. gradient meas. 4=14588
- Xe, discolouration due to N_2 contamination 4=21207
- Xe, electron avalanches, mean energy and drift velocities 4=11546
- Xe flash, high intensity 0=2616
- Xe, glow, anomalous, charge-exchange 3=19219
- Xe, high-pressure, radial temp. and mobility 3=19192
- Xe, h.p., transparency, absorption coeff. 0=9011
- Xe, mixtures with H and He at 7.5-45 atm. 3=4045
- Xe, pulse, possible maser action 4=489
- Xe pulsed, spectra, var. time, discharge 4=24355
- Xe, vacuum u.v. spectra 3=7462
- Xe—Kr, enhancement, by collisions 3=19190
- Xe—0. 1%N_2, positive column, positive characteristics 2=13549

Discharges, electric—contd
- Xe—N_2—Ba, long-lived N_2 metastable state at $\sim$ 8 ev 3=2618-19
- Xe and Xe—water vapour mixtures, afterglow decay rates 4=24599

high-frequency
- afterglow meas. by plasma waveguide cell 4=5572
- afterglows, electron—ion recomb. process 3=7442
- air, breakdown by azimuthal elec. fields 2=22195
- air, discharge configuration, localization by quadrupole mag. field 4=24646
- air, hydrodynamically compressed, temp. characteristics 1=2949
- air, l.p. electrodeless, effect of irradiation 3=1941
- in air, 300 kc/s, skin effect and shock waves 1=4589
- air, u.h.f. self-sustained pulse discharges 0=5296
- arc, ion accel. 4=24624
- breakdown condition, secondary electron resonance 3=24264
- breakdown in nonresonant mag. field 3=24263
- breakdown at optical frequencies 4=18747
- brush, temp. meas. in transition region 3=1947
- C_n^+ and C_n^- distrib., periodicities with var. n 4=16447
- charge conc. meas., probe method 0=1111
- charge concn. in plasma, s.h. f. probe method 0=15028
- charged-particle density meas. 2=19911
- charged-particle energy gain after r.f. field reflection near cyclotron resonance 4=19166
- in const. mag. field, breakdown voltage and discharge resistance 0=19649
- cyclotron, low-voltage, formation 4=19143
- d.c. probe studies 0=14980
- d.c. and h.f. props., correlation 0=3765
- discharge with flow, steady-state solution 0=3755
- elec. field as function of time 0=19669
- elec. field meas. by electron beam 0=5298
- elec. field meas., using Stark effect 0=2352
- electrodeless, effect of irradiation, air at l.p. 3=1941
- electrodeless, effect of irradiation, mechansim of Joshi effect 3=1942
- electrodeless, possible light and ion-source 0=251
- electron bunching in multipacting mechanism 1=10677
- electron distrib. function 3=16912
- electron distrib. function analysis 3=369
- at focus of ellipsoid, 3 cm pulsed excitation 1=16282
- force on electron of inhomog. a.c. field 3=24227
- formation process 0=5297
- with gas tube in microwave helix, noise temp., plasma oscill. 1=18784
- glow, elimination in induction vacuum furnace 0=19640
- graphite electrodes, detection polyatomic C molecules 0=2351
- harmonic generator, coherences and bandwidth 0=12592
- helium, d.c. voltage production in low pressure tube 1=2951
- hydrogen, effect on coupled oscillating circuit 1=5425
- in hydrogen, 300 kc/s, skin effect and shock waves 1=4589
- inert gases, impulse e.h.f. discharge development 0=15029
- ion emission, energy spectra 0=1164
- ion energy distrib. 0=12641
- ionization in discharge path effect of oscill. 3=12066
- ionized gas, particle acceleration by h. f. field at cyclotron resonance 4=8641
- Joshi effect, mechanism 3=1942
- in microwave cavities, l.p., effect of field configuration 0=2354
- microwave discharge tube, liq. helium cooled 4=14583
- microwave harmonic generator, > 600 Gc/s 2=13553
- microwave local discharge in air 1=5426
- microwave, resonant cavity, Q-value meas. 2=11636
- microwave transmission at 8·7 mm 1=19023
- microwaves, without electrodes 3=21726
- moving striations in plasma 1=18839
- multipacting, electron current pulsations 2=11624
- noise from low press. arc 0=10894
- Penning discharge at l.p. 2=13550
- plasma confinement by bell-shaped mag. field, induction discharge 4=11548
- plasma ring, in e.m. field 1=7047
- plasmas, thermal, dynamic props., theory 4=8665
- plasmoid production at plasma res. freq. 0=5324
- point-to-plane, in air, initial stages 0=7102
- positive-ion source, mass-spectrometer study 4=606
- propagation along axis of coaxial line 2=19929

Discharges, electric—contd
high-frequency—contd
pulse discharge, 10 000 Mc/s, formation, and arcing rel. to electric field 3=19215
pulsed induction discharges, plasma loop formation 0=14986
r.f. emission in strong mag. field 3=14535
r.f., interferometric study 4=18714
r.f. plasmoid, rel. to dipolar resonance 4=18716
radiation, microwave plasma, electrodeless dis. 4=16443
recent studies, non-diffusion-controlled, review 4=18715
resonance discharge, and suppression possibility 4=14586
ring configuration, current density distrib., mag. field effects 1=7035
ring discharge, with equilib. current orbit, in variable mag. field 1=7036
ring discharge, equilibrium, X-ray emission 1=7039
ring discharge, in transverse mag. field, apparatus 1=7040
ring discharges, electrodeless, diffusion-controlled, formation and decay times 4=18698
ring, electron motion in r.f. field 4=18939
ring, 60 Mc/s, elec. parameters meas. 3=21728
ring, skin effect meas., 0.9-5.6 Mc/s 4=18717
secondary electron emission in l.p. discharges 3=14551
single-electrode composite discharge 2=7589
spiral structures and resistance extrema 4=8643
standing striations, explanation 3=4043
stationary, recomb. and ionization rates 3=21771
sub-mm waves from cold-cathode arc 0=19920
theory, applic. TR switches 1=4570
torch discharge, heat losses 0=5299
torch, excitation mechanism at 2400 Mc/s 4=11547
toroidal, spectroscopic study, line-intensity time depend. 2=170, 22189
travelling-wave excited, radial electron density 2=22188
u.v. resonance line source, for photochemical work 4=14349
vacuum, 25 Mc/s, electrode config. depend. 3=24228
water vapour–O_2, dissociation of hydroxyl radical 2=2029
weak to strong transition pressure, var. tube dia., at. wt. 4=16442
Ag ring config., mag. field effects 1=7035
Ar, coherent oscillations, 10-100 kc/s, in 1000-3000 Oe 4=24609
Ar, in const. mag. field, electron temp. 2=164
Ar, d.c. probe studies 0=14980
Ar, in mag. fields 0=19648
Ar, microwave plasma, 0.5-400 torr 2=7568
Ar, quenching by SF_6 electronegative seeding 3=19237
Ar, refractive index measurement 0=3778
Ar, spectroscopic data 3=15280
Ar, spectrum, similarity to Geisler tubes at high powers 4=5612
Ar, torch, electrode erosion, lack of for Al 4=8667
Ar—Ne mixtures, electric strength 3=5647
Ar–O_2, r.f., dissociative excitation transfer and optical maser oscillation 2=22908
CO excitation, i.r. temp. and line strength 0=5923
D, ion cyclotron waves, excitation and propag. 3=7622
D, ring config., mag. field effects 1=7035
D_2, in const. mag. field, breakdown voltage and discharge resistance 0=19649
D_2, 3-30 Mc/s, in static mag. field 0=12594
H, ion cyclotron waves, excitation and propag. 3=7622
H, r.f., in single-turn coil, 70 W, 125 Mc/s 4=18713
H_2, breakdown by azimuthal elec. fields 2= 22195
H_2, in const. mag. field, breakdown voltage and discharge resistance 0=19649
H_2, discharge configuration, localization by quadrupole mag. field 4=24646
H_2, dissociation and ionization 2=10285
H_2, electrodeless discharge 2=1406
H_2, electron-energy distrib. 1=4587
H_2, in microwave cavities, l.p., field configuration effect 0=2354
H_2, 3-30 Mc/s, in static mag. field 0=12594
He, breakdown by azimuthal elec. fields 2=22195
He, ignition, effect of auxiliary electrode temp. 0=2353
He, second harmonic generation at 3000 Mc/s 0=258
He, spectrum, similarity to Geisler tubes at high powers 4=5612
He, v.h.f. pulse discharges in a restricted gap, spectra 1=4907

Discharges, electric—contd
high-frequency—contd
Hg arc, for telemetry, modulated at 10 to 120 kc/s 4=8666
Hg, in const. mag. field 0=9019
Hg, effect of mag. fields 0=16983
He—Hg r.f. discharge, laser action 4=3210
Hg—Kr, population enhancement 1=12250
Hg–Tl mixture, r.f. excitation 2=22907
I afterglow, ion-ion recomb. coeffs. 4=27489
K, in const. mag. field, electron temp. 2=164
Kr afterglows, recombination in 0=2345
N, afterglow, electron density, var. with time, and aurora 4=532
N, torch, electrode erosion, lack of for Al 4=8667
N_2, $A^3\Sigma_u^+$ state, diffusion, lifetime 3=17579
N_2, active, free electron density meas. 3=1935
N_2, afterglow, intensity change with time 2=15898
N_2, catalysed dissociation 4=11553
N_2, condensed products 0=6195
N_2, gas, afterglow, rel. to e.s.r. at λ=10 cm 2=1211
N_2, production of active nitrogen 4=3865
Ne, in column excited at one end, velocity of ionization front 3=4037
neon, effect on coupled oscillating circuit 1=5425
Ne, electrodeless, spectroscopic study 2=11627
Ne, harmonic power 0=19647
Ne, s.h.f. 0=16982
Ne, spectrum, similarity to Geisler tubes at high powers 4=5612
Ne, superimposed discharge on d.c. glow, stationary striations 0=7086
Ne, 3200 Mc/s, pulsed, ionization boundary movement 4=21471
Ne, v.h.f. pulse discharges in a restricted gap, spectra 1=4907
Ne + 0.1% Ar, ambipolar diffusion of electrons 0=12585
Ne—Ar in pulsed microwave fields, electron density build-up 3=12086
Ne–O_2, r.f., dissociative excitation transfer and optical maser oscillation 2=22908
O, Schumann-Runge bands 1=14037
O_2 afterglow, ionic charge-exchange 1=277
oxygen, effect on coupled oscillating circuit 1=5425
O_2, condensed products, reaction with Cu 0=14982
O_2, microwave discharge, net ionization freq. 3=9723
Xe afterglows, recombination in 0=2345
Xe, repetitive, spark channel explosions 3=1950

Dispersion, optical—contd
optical images for partially coherent light 4=8397
oxide glasses, 0.4-5.3 μ 3=20439
phenacite, i.r. birefringence dispersion 1=1144
phenanthrene, in exciton absorption band region 3=20494
poly-dispersive indicatrices, sensitivity to form of distrib. curve 1=16116
prisms and prism combinations, formula 3=242
quartz, effect on harmonics of ruby laser 2=8512
quartz, new formula 0=2257
rotary dispersion curves, analysis 0=17842
rotation, effect of paramag. enhanced singlet—triplet transitions 3=19971
rotatory, nature and origin 2=22063
sapphire, synthetic, 0.265-1.586 μ 3=2992
semiconducting materials 1=17865
semiconductors, near absorpt. bands 2=23520
semiconductors, near absorption edge, calc. 4=13002
solids, dispersion relation interpretation of optical data 2=6535
statistical treatment, in particlar rel. to temp. 2=11250
stilbene, i.r., 20.4°K 1=11382
synthetic single crystals 2=16799
tolan, i.r., 293°K 1=11382
tolane, cryst., 0.75-17 μ, oscillator strengths 4=4282
uniaxial crystals, absorpt. bands shift 2=23565
upper atmosphere, micrometeorite dust particles 2=9008
use in composition determ. of gas mixture 1=4373
variation with wavelength, effect of angle of prism 3=21520
Ag, reflection, phase shift meas. 4=28709
Al, reflection, phase shift meas. 4=28709
Au, thin films 0=4402
BaF_2, 0.2652-10.346 μ, 25°C 4=17554
$Ba(NO_3)_2$, $Pb(NO_3)_2$ and $Sr(NO_3)_2$, formulae 0=2934
$BaTiO_3$, far i.r., analysis 2=14643
$BaTiO_3$, i.r., coupled-optical-phonon-mode model 4=28670
CCl_4, in strong i.r. band region 4=22397
$CHCl_3$, anomalous dispersion 1=2757
$CHCl_3$, in strong i.r. band region 4=22397
CS_2, anomalous dispersion 1=2757
CaF_2 in i.r. 1=19944
CaF_2, 0.23-9.7 μ 4=4253
CdO, curves, on damped oscillator model 4=10165
CdO films, 1-14 μ, cond. electron mechanism 2=16811
CdO, in infrared 0=11752
CdS 1=2437
CdS 1=6202
CdS, reflection bands obs. 3=15652
CdS, 20°K 2=23543
CsBr, meas. in i.r. eigen-vibration region 1=17866
Cu, reflection, phase shift meas. 4=28709
$EuCl_3.6H_2O$, $^7Fo-{}^5Do$ transition meas. 4=7130
Ge, monocrystals 0=16044
H atom, optical polarizability calc. 4=3776
Hg, $^3P_1-{}^1S_0$, exam. using light source and Mach—Zehnder interferometer 4=11365
KCl, lattice dispersion freq. at 82°K 0=13665
$KMgF_3$, from far i.r. data 4=17579
$KTaO_3$, dielectric, far i.r. 3=4947
$KTaO_3$, i.r., coupled-optical-phonon-mode model 4=28670
LiF, i.r., theory 3=15684
MgF_2, from far i.r. data 4=17579
MgO, i.r. theory 3=15684
Mg platinocyanide, anomalous 0=6168
N, in u.v. 0=16821
NaCl, i.r. 2=6541
NaCl, lattice dispersion freq. at 82°K 6=13665
NaCl-type ionic crystals, i.r. anharmonic potential effect 4=1751
NaCl:Cd, 1-6 eV, rel. to quenching 2=23564
NaCl:Ni, 1-6 eV, rel. to quenching 2=23564
NaI:Tl, activator conc. depend. 4=1752
O_2, microwave, calc., 0.25 to 50 atm 1=12930
PbS, refr. index, near absorption edge 3=25436
Sb, reflection, phase shift meas. 4=28709
Se, amorphous, mechanism 2=4122
SnO_2 films, semiconducting, near i.r. 4=1755
$SrTiO_3$, far i.r., analysis 2=14643
$SrTiO_3$, i.r., coupled-optical-phonon-mode model 4=28670
TiO_2, far i.r., analysis 2=14643

electron beams, using Ce sulphate solns. 4=9017
electron irradiation problems, calculator 1=4996
electrons, scintillation dosimeter 0=2463
exposure dose rate, ionization chamber 2=17987
fast neutron dosimetry in pile irradiations 0=12997
field equations 2=16339
film-badge, extension of range by X-ray spectrometry 0=19977
film badge reader and recorder 4=5896
film dosimetry monitoring of personnel 1=19067
film dosimetry, for personnel monitoring 2=16098
film method, for checking output of X-ray machines 0=20110
film processing, use of fixing developer 2=19736
film, radiation "hardness" energy meas. method 4=5897
film for radiation safety-control badges 2=13707
Fricke dosimeter, oxidation efficiency for P^{32} 3=7830
Fricke dosimeter, use of ion exchange column 3=7750
Fricke $FeSO_4$, calibration, 10, 20 MeV e's 4=5898
Fricke, oxidation yield, calorimetric determ. 2=9750
γ-detector, small, for high intensity 3=17235
gamma dose in hole in uniformly contaminated plane 1=9822
γ-dose rates in "Apsara" 2=10184
γ-dose received by moving bodies, calc. 2=5827
γ-dosimeter abs. calibration, by calorimetry 3=574
γ, fluorescence escape corr., for sheet 4=3378
γ, low energy, and β, mixed, photographic 4=3254
γ, rate inside spherical source of radiators with Gaussian distribution 4=3376
γ-ray background in atmosphere 3=9055
γ-ray energy absorption, penetration and diffusion in infinite homogeneous medium 4=3373
γ-ray, 0.01-50 MeV, air-equivalent materials 2=9817
γ ray, plane source calc. from point source data 4=6008
γ-ray, power series buildup factor tables for finite plane source 4=9158
gamma ray, semicond. Si p-i-n junction, Li drifted 4=19475
γ-ray scatt. off concrete 2=20534
γ-ray, sensitivity, 15-300 MeV 3=5977
gamma-rays, detection in liquid or gaseous effluents 0=5448
gamma-rays, distribution, in cylindrical volumes of water 0=15558
gamma-rays, dose-rate outside spherical source 3=10279
gamma-rays, film calibration using shielding device 0=3892
gamma-rays, glass dosimeter for 1.2 MeV 0=12726
γ-rays, integral absorbed power, calc. 4=15035
gamma-rays, near interfaces 0=12895
γ-rays, in Mr-range, photographic film, without processing 1=400
gamma-rays, neutron-insensitive proportional counter 0=15321
γ-rays in nuclear explosions 1=16727
gamma-rays, plastic scintillators for high-intensity dosimetry 1=7227
γ-rays, scintillation dosimeter 2=9816, 20298
γ-rays, Ti sulphate soln. 2=20291
γ-rays, use of benzene in water 2=5533
γ-rays, using gas discharge counter 3=14945
γ scatt. from unidirectional source, var. ang., dist. 4=25056
gas-phase, by use of ionization meas. 4=24952
gaseous fission fragments, e.g. Kr^{88} 4=28076
glass, Al-phosphate, dosimeters, for β, γ, neutrons and fast particles 4=5892
glass, Si 104, increase in opt. absorption, appl. 1=19070
handbook of radiological units and meas. 1=21114
high fluxes of ionizing radiations 0=15196
ICRU recommendations 4=22050
intermediate energy neutrons 2=13204
ionization dosimeters, effect of variations in ambient air (book) 1=8405
isodose, automatic plotter 0=9242
large doses, review of current methods 0=5455
large-surface source, surface dosage technique 2=13708
liq. systems, dissolution of irradiated NaCl and organic solids 1=20760
luminescent, air-equivalent, temp. var. 3=17117
luminescent dosimeter for personnel monitoring 2=3218
megarad region, use of radiation effects on polyethylene 1=4837
in metallic vessels, ferrosulphate method 4=9016

Dosimetry—contd
microcalorimeter for ionizing radiation, portable 4=22053
natural radioactivity in atmosphere 1=15243
neutrons, absorbed dose, and neutrons + γ-rays 1=13233
n, based on long BF_3 counter 4=21882
neutron, of body Na^{24} activity 3=21151
neutrons, fast, from proton-recoil, discriminator losses 0=7249
neutrons, fast, response of pocket γ-ray dosimeter 0=9385
n, fast, Si rectifier, n^+—p—p^+, diffused 3=24816
neutrons, fast, by thermoluminescence 4=6078
neutron fluxes, absorbed dose determ. 2=18033
neutrons, 14 MeV, chemical systems 4=25118
neutron, with LiI crystal in polyethylene moderator 3=2282
neutron, by $Ni^{58}(n,p)Co^{58}$, branching ratio errors 4=19536
neutron, new emulsion with increased gelatine 3=24569
neutron and photon dose measurements 1=13234
neutrons, review, all energies 3=17292
neutrons, semiconductor device 0=2551
neutron, slow and fast, by selective fission fragment track registration 3=24752
neutrons, tissue dose, Hurst counter, 0.25–1MeV 4=3428
n, use of nuclear emulsions, type K 4=915
optical rot., for Co^{60} γ-facilities 3=19799
organic scintillator use 2=11838
oxalic acid, for in-pile use 3=22453
paraffin phantoms, depth-dose studies, for 3 and 33 BeV proton beams 4=13979
pen, characteristics, X-ray (up to 300 kV) and n responses 3=22045
phosphor R28 ($2BaBr_2 . BaF_2$), use 2=1631
photoactivation application 2=5889, 5891
photographic film, use of secondary electron emission 3=14831
polyacrylamide, γ-dosimeter 1=8406
primary collision efficiency, rel. to neutron energy 3=10423
radiation dose to Canadians from fallout 4=17913
radioluminescent dosimeter 0=314
radiometer for β-active gases in air, conc. detm. 4=1032
radionuclides, efficacy of radiation detectors 0=7251
reactor irrad., energy dose, calorimetric meas. 4=6087
reactor radiation, isothermal calorimeter 3=696
recommendations, ICRU 3=24878
recording dosimeter film, wavelength-independent 0=19978
space, due to cosmic rays, Van Allen belts and flare particles 4=20958
space vehicle radiations 3=24557
spectral flux density of scattered and primary radiation 250 kV 1=15362
spectrophotometric dosimeter in range 500-5000 rad using methyl orange dye 4=5894
tables to evaluate film badge doses 2=22367
thermal radiation, high intensity 0=8833
thermoluminescent devices, phosphorescence method of reading 3=23133
thermoluminescent, for linearity and storage stability 0=9241
thermoluminescent, reading system 3=19511
thin plastic radiation dosimeter, low-energy doses 2=7798
units, ICRU report 4=6259
Universal Radiometer, RUS-3 4=16740
use of fluorescent organic solids 1=3697
use of plastic materials 0=20367
vinyl rigid film dosimeter 1=399
whole-body counter, γ-emission, 150 mc to 10 μc 4=22052
whole body counting with single NaI:Tl detector 4=25332
whole-body, NaI counter calibration 2=15421
X-ray isodose plotter 3=19391
X-ray, semicond. Si p-i-n junction, Li drifted 4=19475
X-rays, exit dosimeter, for effective patient thickness 0=7250
X-rays, 4-20 MV, locally absorbed, by C calorimeter 4=11739
X-rays, meas. near diagnostic apparatus 0=20111
X-rays, in Mr-range, photographic film, without processing 1=400
X-rays, soft, using Ce sulphate solns. 4=9017

Dosimetry—contd
B, using reaction $B^{10}(n, \alpha)Li^{7*}$ 2=16207
CaF_2:Mn thermoluminescent phosphors for γ-rays 1=1994
$CaSO_4$(Mn) thermoluminescence dosimeter for γ-det. 3=5978
$CaSO_4$, Sm-activated, thermoluminescence appl. 1=16621
Co^{60} γ-ray ionization, meas. 2=5603
Fe wall, γ-ray source, point isotropic 2=22817
ferrous ammonium sulphate for γ-rays 1=9743
LiF thermoluminescence, after X- and γ-ray exposure 2=16097
LiF, thermoluminescent 3=17116
MgF_2:Mn thermoluminescence, appl. 2=2265
by N reactions, in N + O mixtures and N oxides 4=5893
N_2O dosimeter compared to Fe- and Ce sulphate 1=3094
N_2O, high-dose dosimeter 4=11859
NaI:Tl as density amplifier in radiation surveys 3=2170
NaI:Tl dosimeters in radiation surveys 3=2170
Ra, microcalorimetric calibr. methods 2=12149
Ra in soln., microdosage using nuclear emulsion 3=4582
Si 4=27717

Double refraction
See also Electromagnetic wave propagation; Optical constants; Optical rotation; Polarized light.
ADP, effective thickness of two birefringent crystals 4=17549
acetone, rel. to shock waves 3=7205
addition copolymer solns., elec. birefringence, meas. 4=5179
alkali halide crystals, rel. to stress/strain relationships 3=22649
alkali halide ionic crystals, birefringence effects in irrad. crystals 4=28496
anilene hydrobromide, optical props. 1=19942
anthracene single crystal 2=6546
biaxial crystals, graphical determ. 2=13461
birefringence compensator and photoelectric polarimeter 4=14402
birefringence meter, with Se photocell 2=1283
birefringent crystal section, retardation determ. method 4=28665
calcite 2=12579
calcite, effective thickness of two birefringent crystals 4=17549
colours, trichromatic coefficients, tables 0=19434
combination laws, Maxwell effect applied to poly dispersed systems 1=9488
compound semiconductors 1=17741
Cotton–Mouton effect, rel. to temp. etc. 2=123
in crystals, additional light waves in exciton absorption region 3=10913
crystals, birefringence surfaces and optical indicatrix 3=20444
crystals, edge dislocations arrays, colour contrast 3=7351
crystals for prodn. of γ-ray circ. polarization 3=14937
crystals, study using polarizing microscope 0=3613
crystals used for control of laser radiation 4=27278
deflector, fast, digital, for laser, using $CaCO_3$ 4=16228
in demodulation of phase-modulated light, demodulator design 4=29726
diamond, composite class 2=8501
diamonds, rel. to crystal classes and i. r. behaviour 2=8498
dichroic beam splitters 1=10583
dyes in films, on polarized light irrad. 4=17586
effects, obs. using optically-dense dispersive media 3=10911
Faraday effect, microwave, in birefringent medium 4=26173
feebly anisotropic media, analysis 2=17655
fluids flowing in cylindrical tubes 1=18431
gas mixture, prod. by elec. fields 1=4377
gases, non-linear effects, calc. 4=240-1
gelatin solution, variation of opt. sensitivity with time and temp. 0=16194
glass, by ionic migration 4=30682
half and quarter-wave plate testing, using iceland spar rhomb 4=330
hambergite, $Be_2BO_3 . OH$, and structure 4=4598
n-heptane, rel. to shock waves 3=7205
ice, rel. to temp. 2=8481
limespar, revised data 4=26215

Double refraction—contd

fog, size distrib. 2=2476
formation, droplets, liquid with solid inclusions 0=5213
formation, in Hg electrode 0=14612
formation at nozzle tips, Plateau's spherule to drop diameter relation 3=23856
formation in supersaturated vapours 1=6849
formation by u.s. excitation of liquid surface 3=23850
free fall vel. for varying mass 4=27150
freezing of supercooled electrolytic solutions 2=22101
fuel, combustion rate rel. to initial drop size, technique 4=13726
generator, rotating plastic bowl 1=12854
glycerol, shape calc. from surface tension 4=16098
gravity coalescence, effects of interfacial diffusion 4=145
growth by diffusion in aerosols 1=11632
growth velocity in supersaturated atmosphere 4=5466

Drops—contd
hygroscopic, growth in humid air stream 1=11746
immiscible, moving in fluid, forced scalar transfer 4=134
impact on metal, pit formation 0=8142
impact with plastic surface, and meteorite with earth 4=23901
impact on rigid walls, theory 4=2646
interaction in aqueous-disperse aerosols 1=11630
internal circulations 3=14133
large droplet growth in clouds 4=2194
liquid, acoustical holder 4=24155
liquid boundary, electrostatic deformation 4=18166
liquid, coalescence process under voltage 3=14131
liquid, evaporation, foreign film influence 1=10494
liquid, at liq.—liq. interface, equil. shape 3=11773
liquid, production, photographic study 3=23857
liquid, sliding on solid surfaces 2=11343, 15560
liquid—solid collisions, particle velocities 1=15827
liquid sprays, size analysis by sedimentation 3=11363
metals, resolidified, voids 1=20631
milk, electrification, sign of charge rel. to droplet radius 4=8599
on miscible liquid surfaces, mixing zone circulation 0=19086
in mist, over liquid, dynamic equilibrium 3=5556
molten zones, shape equations 4=14130
motion, interfacial mechanism, suggested soap film analogue 4=146
movement in liquids, due to surface active substances 3=5426
moving through liquid, wake configuration 1=10482
non-volatile, size distribution determination 1=11744
oil, accelerated charged droplet prod. 2=11346
oscillation and deform. on falling through water 3=7196
oscillations, damped 0=14611
polystyrene, under const. tension 1=14575
process, diff. eqns. 2=9422
production of suspensions 4=30909
production, uniform size, from vibr. capillary 4=18169
production by vibrating reed 1=15826
rain, coalescence, allowing for condensation 3=16217
rain, evaporation 3=9040
rain, size distrib. for monsoons, and thunderstorms 1=20830
rain, size distribution, var. during fall 3=13672
raindrop breakup, causes 1=20829
raindrop spectrum analysis 2=15192
raindrops, shape, field meas. 0=8434
self-nucleation in H_2SO_4–H_2O systems 1=20771
sessile, formula for height 3=14134
sessile, minimum-energy treatment 0=6772
sessile, surface tension computation method 2=17428
size-distribution determinations by electron microscopy 0=6771
size distrib., electronic disdrometer 1=12687
small particle motion in non-uniform gas mixture 1=11634
source of uniform-size droplets 4=29607
stationary, volume measurement 4=21005
statistical thermodynamics of spherical droplets 4=14151
and surface tension meas., from curvature, using interferometer 4=16098
suspensions, production for electron microscopy and
transition ranges for 3-dimensional wakes 1=18374
transparent, high-speed cinematography 4=8468
vaporization and combustion, theory 0=14894
vapour pressure of elec. charged droplets 2=11538
volume, "micro-rod" technique 0=6770
wake of a drop of organic liquid moving in water 1=4319
water, in atmosphere, condensation processes, mechanism 4=7835
water, coalescence and bouncing at air/water interface 4=24154
water, coalescence with surfaces 1=11745
water containing D_2O, falling meas. through immiscible liq. 2=11231
water, diffusion forces with non-volatile particles 1=11633
water, disintegration in elec. field 4=24153
H_2O with dissolved electrolytes, freezing, expt. investigation 4=2888
water, falling into water–glycerol mixture, effect of viscosity on splash 0=8644
water, 15-500 μm radius, prod. by vibrating capillary 3=14132

Drops—contd
water, freezing, fragmentation and electrification 1=20832
water, freezing temp., effect of electrolytes 4=21354
water, i. r. absorption cross-section 2=11026
water, i. r. attenuation, scattering and absorption cross-sections 2=11027
water and ice, back-scattering cross-sections 2=4597
H_2O, ice growth in 4=10476
water, induced charge determ. 2=15877
water, Leidenfrost phenomenon at 100°-500°C 3=7389
water, in mist, photoelec. meas. 0=12110
in water mists, stabilization by insoluble monolayers 1=11631
H_2O, 0.2—3 mm in diameter, size and conc. meas. by drop-size sensor 4=10700
water, pendent, equilibrium theory 1=15825
water, polarization of light 0=19453
water and salt solution droplets, charge accumulation and loss 4=5539
water, shapes under low gravity 3=18668
water, size, det. using photographic emulsions 1=12853
water, striking water surface, energy dissipation 4=21086
water, supercooled, elec. fld effect on freezing 4=11403
water, supercooling, electric field effect 4=368
water, sur. tension at critical points 4=8159
water, vapour-exchange with environment 3=294
Drying
acoustic, in standing sound wave. 3=218
dehydration of solid surfaces 1=15184
heat and mass exchange during drying 3=1866
sublimation, evaporation intensity in vacuum 2=9327
Dusts
See Aerosols; Powders.
Dynamics

centripedal force, student experiment 2=13289
centripetal force apparatus for teaching 3=11655
class of force functions generalizing functions of radial forces 4=29572
classical analytical, formal derivation, rel. to Poisson bracket 4=21062
classical, generalized, classical analogue of Fermi oscillator 0=8569
classical, rel. to minimized quantum action 3=1615
classical and quantum, unified variational formulation 3=7112
classical and quantum, unified variational formulation 3=14027
conservation eqns., in curved space, general soln. 1=1720
conservation of momentum, student demonstration 2=13293
continuous media, non-holonomic models 2=11312
cylinder, hollow, elastic, contained in rigid cylindrical tank, 1=1777
degenerate systems, generalized canonical formalism 4=85
Dirac electron theory, classical Hamiltonian 4=6020
"dynamation", defin. and proposal of word 3=3775
elastic—plastic strings, spatial motion 1=15767
elliptic motion about slowly varying force centre 4=11133

Dynamics—contd
equations, covariance under conformal coordinate transformations 0=1183
equations of motion and conservation laws, scalar, vector, tensor theory 4=11134
equation of motion, differential eqn. system, reduction 2=5
equations of motion, existence of fourth algebraic integral 4=14094
equation of motion with linear constraint in Hamiltonian form 2=21847
equations of motion of solid body under gravity 2=13294, 19486
Euler—Lagrange eqns., rel. to curvilinear derivative 2=15520
Euler's theorem extension to Minkowski space 4=36
fall of a towed wire 2=19487
Fermi system, Feynman principle 0=8570
field determination from trajectory families 4=8124
fluids, book 2=21867
focusing fields 3=11745
focusing of neutral-particle beams by Coriolis forces 4=2615
force and velocity, electrical analogues, sign convention 1=2722
forces between ski and boot 4=24117
formulation, unification with electromag., using linear differential forms 2=5435
gases, equations, approx. integration method 4=21166
gravitational and inertial mass 0=6641
gyrocompass, horizontal 3=23821
Hamilton—Jacobi eqn., rel. to quantum-mech. operators 4=11068
Hamiltonian, rel. to de Broglie waves in space—time 4=14024
Hamiltonian formalism, relativistic, for classical particles 4=5030
Hamiltonian system, integrals of motion, classification 4=5110
Hamiltonian system with time-depend. forces, perturb. theory 3=23820
Hamiltonian theories of interacting particles, invariance 4=826
hereditary dynamic systems 0=10627
holonomous and nonholonomous systems, equivalence of equations 4=11129
hypoelastic medium, small additional motion superposition for hypoelastic medium 4=24121
hypoelastic stability for simple extension 4=24122
impact ball apparatus 0=19031
impact, perfectly elastic, of material systems 3=1645
inertia law and Galileo 4=27117
Lagrangian formulation and Feynman quantum path integral methods 4=27122
Lagrangian and Hamiltonian formalisms with supplementary conditions 4=24113
Lagrangians with high derivs., canonical conjugate momentum 4=18120
Laplace—Lenz vector, from Lagrangian 4=27119
Larmor's analogy, test for terrestial spectrum 1=20797
linear array of colliding spheres 0=3475
linear mechanical oscillator 0=14564
loop-the-loop reversed 1=98
mechanical impedance, mobility, analytical expressions 3=7259
mechanical motions, optimal forms 2=17391
momentum of continuous system of variable mass 2=19485
momentum experiments, air-suspended pucks 0=16656
motion of a rigid body in a Newtonian force field, Poincaré theorem 3=23818
motion of systems with Coulomb friction 3=1647
motion of two bodies with corpuscular radiation 4=10796
moving coordinate system, tensor density, local derivative 3=23728
nearly adiabatic systems, change in action integral 4=16066
nearly periodic motion, perturbation theory 2=13243
Newton's laws of motion and 17th century laws of impact 4=14091
Newton's second law with variable mass 4=8120
Newtonian and perturbation forces, certain cases of integrability 4=5112
orbit generation by generalized Hill curves 3=16565

Dynamics—contd
orbital calculations in globular clusters 0=18809
oscillator, nonlinear one-dim., under adiabatic conditions 4=5111
particle, domonstrations with simple spring gun 3=5399
particle motion in three dimensional polar coords. 4=18121
point mass movement under central force action 3=9384
point with variable mass moving in rarefied resistive medium 3=21269
powder subsidence trough, random walk model 4=16068
Poynting–Robertson effect for spherical radiation source 2=15291
" product of inertia" concept, extension 4=27120
quantum—classical reln., continuous represent. theory 3=21231
quantum mechanical system, law 2=30
quantum theory, Feynman functional integrals, approx. eval. 4=57
random motion energy in expanding universe 4=10779
relativistic, continuous media 4=41
relativistic, Lagrangian formalism 1=10424
relativistic, Liouville eqn. 2=11274
relativistic particles 1=5200
relativistic, special, geometrical representation of relation 4=11040
rigid strip mass on an elastic half space excited by a seismic wave 3=18770
rockets, relativistic 0=18923
rotating viscous liquid column, stability 1=1732
satellite motions, orbital and attitude 3=16433
separability of Hamiltonian with quadratic and linear terms 4=14093
separation of variables for seleronomic systems 4=27121
simple harmonic motion, student demonstration 2=13290
small coordinates, canonical transform 4=8121
solid body partly filled with water, minimum stability 4=5113
solid state, with constraints 3=9385
sphere in sound field, force on, motion of 3=18909
stability condition 3=3776
stability of motion, general 4=104
stability of motion, Lyapunov princ. generalization 4=103
stability of motion, use of several functions 3=18769
stochastic, appl. of reduction of Cartesian tensor 2=21785
synchronous orbits of sphere, ellipsoid, in orbital plane, stability 3=11494
third integral of motion 3=11492
3-body motion problem, hyperbolic-elliptic, 3 classes, transition 2=19488
three-body problem, elliptic restricted, eqns. 4=17974
three-body problem, librations near triangular point 3=11743
three-body problem with neg. energy const. 3=7162
three-body problem, oscillatory motion 1=6812
three-body problem, oscillatory motions 0=16659
three-body problem, perturbations of regularized equations 4=24017
three-body problem, with plane constricted to roll on cone 2=9221
three-body problem, restricted, 800 orbits calc. 4=18122
three-body problem, restricted, elliptical, Lagrange triangle solns., stability 4=24115
three body problem, stellar encounters in falactic field 4=13874
three-body problem, zero velocity curves and orbits 3=11742
three-particle system Hamiltonian, no-interaction theorem. 4=14015
time and energy as conjugate variables 2=17392
time and energy as conjugate variables 3=21208
torsion pendulum, equation of motion and complex modulus corrections 1=12837
trajectories independent of mass 0=3476
2 bodies, equations of motion, from n-body radiation energy calc. 4=2608
2-dimensional motion demonstration 3=9383
two fixed force-centres, matched-conic approx. 3=11493
unstable systems, transitory movements, and sun, granules 3=18630
use of null flat-space coord. systems 4=5046
variable mass body, in general relativity 4=11044

Dynamics—contd
vertical circle teaching apparatus 2=11310
vibration—impact system, model tests 3=23823
virtual work, generalized principle 3=9386
viscoelastic sphere, change to torus 0=55
wear particle, viscoelastic, between sliding surfaces 3=16564
weight on a string, angular momentum non-conservation 3=11740

Dynamometers

magnetic field—contd
IGY meas. rel. to earth currents and solar activity 2=17212
impulses rel. to 3 to 4 day mag.field variation 2=13067
induction magnetic pickups 3=13820
intensity meas.up to 236 km at New Mexico 1=21086
interaction with e.m. signal from nuclear explosion 3=7717
interaction with solar corpuscular radiation 1=15358
interaction with solar corpuscular stream 1=15353
interaction with solar "wind" 1=10705
interaction with solar wind, current theories 4=10738
interaction with solar wind, interplanetary mag. fld. effect 3=25958
interactions with ionosphere 3=13705-6
interactions with solar plasma, theory 3=13819
interface between solar wind, geomag. field 2=17211
interface with solar wind, 2nd approx. calc. correction 3=21072
interface with solar wind, stability 3=21071
introduction to study 1=21082
ionosphere e. m. wave propag., refractive index, absorption index var. 4=30947
ionosphere, effect on perturbations due to travelling body 2=8991
ionosphere, F-layer bifurcation, influence 2=899
and ionosphere, review of 1960-62 U. S. work 4=30948
K indices, diurnal variation during quiet days, 1940—48 1=15342
Koror, daily variations, using contours based on running means 2=17215
Kp coefficient, rel. to appearance of aurora 4=26829
land survey meas., statistical reduction and analysis 4=29345
latitude variation analysis 2=15179
lines of force in space 1=6648
local, separation of external and internal parts, formulae 4=15894
localized distortions near auroral zone, meas. 2=13073
long-duration disturbances, rel. to corpuscular streams 2=964
low activity, effect on cometary tail activity 1=7981
low- and high-latitude agitation 1=15341
lower ionosphere mag. micropulsations, rel. to space-charge systems 2=6964
m.h.d. explanation 4=13856
m.h.d. wave propag. in magnetosphere 4=17957
magnetic crochets rel. to solar flares 2=11128
magnetic mirror machine theory 1=6598
magnetic plasma clouds, cosmic ray interaction 2=21680
magnetic pole, formula of reduction, numerical calc. 4=15893
magnetic pole positions in geological past 2=11096
magnetic storm effects by whistler analysis 2=6963
magnetic storm induction, theory 3=9123
magnetic storms in high latitudes, features 1=21097
magnetization mechanism 1=8334-5
magnetoacoustic, mixed, and transverse hydromagnetic waves, at 3.7 to 7 earth radii 2=17213
magnetogram reader, semiautomatic 3=11463
magnetometer, using optically pumped He^3 4=7931
magnetometer, proton, effect of non-instantaneous switching of polarizing field 4=30013
magnetometer, Rb, self-oscillating 4=26887
magnetometer, rotating coil, meas. 1=5525
magnetopause, review 4=4958
magnetosphere dynamics, impedance transfer concept 3=13838
magnetosphere hydromagnetic emissions, X-ray bursts and electron bunches 2=24061-2
magnetosphere, outer, charged-particle obs. 4=2246
magnetosphere, particles behaviour 2=17199
magnetosphere rotation, effect on solar wind velocity 4=7933
magnetosphere—solar wind interaction 3=9134
magnetosphere surface current effects 2=24056
magnetospheric interchange instability 3=11464
magneto-telluric fields, theory and origin 3=1477
magnetotelluric invest., induction pick-ups 3=9122
main field as cumulative result of disturbances 3=13826-7
main field in space, graphic data 2=19258
mapping, automatic 4=4820

Earth—contd
magnetic field—contd
measurement 1=10877
meas. with d.c. Rb^{87} and proton free-precession magnetometers 3=8190
measurement, e.s.r., D.P.P.H., a.c. mag. field, by asymmetry 4=2315
measurement methods, review 1=11653
measurement, nuclear, limitations 4=29334-5
meas. by n.m.r. of liquids 3=21420
measurement, nuclear magnetometer 4=17956
meas. using proton free-precession magnetometer, recommended value of gyromag. ratio 1=2051
measurement, proton generator, tank synchronizer 4=3202
measurement, recent methods, review 4=4821
measurement, remote, by whistlers, high-latitude field line 4=2210
measurement by unifilar photoelectric compensated magnetometer 4=29333
measurements by Explorer X satellite 2=13064
and meteor trails, diffusion and scattering 4=30978
model, analytic, series 3=18565
model selection 4=13857
N dip pole posn. (1962.5) 4=15895
near, calc. and use of local models 4=7935
Newton integral transform, inversion 3=1583
nomenclature 3=16294
non-dipole, westward drift, influence on earth's rotation 1=7950
Nov. 1960 events 2=18216
nuclear induction apparatus, meas. 4=30499
n.m.r. magnetometer 2=4689
nuclear magnetometer measurement 1=7114
origin 3=23643
origin due to circulating current system in core, theory 1=21084
origin, and unlikely magnetism of other dwarf planets 4=10877
origin, in vortex motion of fluid in crust 3=18567
outer atmosphere artificial electron injection as research aid 3=16238
outer, satellite meas. 4=10769
palaeomagnetism, use of a.c. demag. of igneous rocks 1=21107
parameters rel. to ionospheric f_0F2 critical frequencies on following day 1=21005
particle motion in dipole magnetic field, equatorial plane 2=7717
plasma, expanding, in conducting half-space, e.m. pulse generation 4=13773
polarity reversal 4=23812
precessional torques, as cause 3=21070
properties 4=10767
proton belt (quiet-time) distortion 3=1492
protons, trapped, asymmetry effects at high energy 3=16292
quadrupole component, penetration through ionosphere or magnetosphere 4=26874
radiation belt anomalies correl. at 320 km 2=19252
in radiation belt, rel. to electron flux 1=6644
in radiation belt, rel. to electron flux 1=10338
radiation belt particle distrib. correl. 2=19250
radiation belts, ring current 3=16293
radio wave propag., influence, wave-guide modes, theory 2=7756
relative to general corpuscular field due to sun, existence, theory 2=965
relative to third radiation belt 2=919
review of satellite data 4=26925
ring current, cosmic-ray evidence 2=4696
ring-current depression, rel. to cosmic-ray depression 2=13905
ring current growth, rel. to quite auroral arcs 3=6995
ring current rel. to Van Allen radiation belts 1=21089
rock palaeomagnetism, rel. to earth's radius changes 1=5132
rocks, thermoremanent mag. after cooling under stress 1=21108-9
and rotation, fossil 3=11465
S and L in low-latitude region, comparative study 3=13829
satellite data review 2=15171

Earth—contd
magnetic field—contd
satellite orbit, effects on 2=4865
scale times and lengths 1=5185
solar corpuscular flux, hollow 3=9120
and solar corpuscular phenomena, July (1959) 1=18084
solar corpuscular radiation interaction 2=9042
solar corpuscular stream boundary by interaction with dipole field 2=6965
rel. to solar corpuscular stream, stationary hollow 1=15257
solar hydromagnetic radiation, effect 2=13077
solar proton capture, rel. to earth's new rotation 1=15218
solar stream distortion and polar electrojets 2=11095
solar wind, stability, rel. to geomag. storm 2=4693
S. Atlantic anomaly, rel. to inner radiation belt at 320 km 1=21067
South Atlantic anomaly, rel. to inner radiation belt at 320 km 2=11084
space research, review 3=25937
in space, review 4=4795
spherical harmonic analysis, truncation errors, and downward extrapolation problem 4=23811
Sputnik III data, prelim. report 2=13063
Sputnik III rocket-case, geomag. deceleration 1=18227
Sq current system, movements, seasonal changes 2=19214
stability, magnetohydrodynamics 2=13079
standard data, automatic digital recording 2=6960
strength and direction, rel. to whistler ray paths 2=11035
sudden impulses in equatorial region, daytime enhancement 1=4134
and sun, radiation, corpuscular, interaction 3=24288
tables, Ottawa 3=13822
terminal shape, ring-current effect 2=19269
thermoremanent magnetization of rocks 1=6657
time calc. formula 4=10768
Transylvania, magnetic declination survey 1=6647
Transylvania, survey 1=1574-5
trapped electron energy spectrum rel. to Van Allen belt 1=21071
trapped particles, drift frequencies 1=15327
travelling waves rel. to geomag. activity 2=4595
Van Allen radiation belts, Soviet cosmic rocket measurements 1=3306
whistler guidance, rel. to Cherenkov radiation 2=4608
world-wide changes 2=9036
zones of disturbance during IGY, rel. to solar corpuscular stream 1=1591
magnetic field, variations
See also Magnetic storms (subheading introduced in 1961. For previous entries see Terrestrial magnetism, variations).
activity under electrojet 3=25939
activity, rel. to v.h.f. backscatt. data 3=9080
annual, solar control 3=16300
anomal., mass and depth meas. 3=18470
anomaly obs. at Alert, 1962 4=4824
anomaly trend and spacing patterns 3=21073
April—June 1961, rel. to solar activity 3=13886
atmospheric tide effects 4=23774
and atmospherics, v.l.f., 'distorted, formation 4=13803
and aurora 4=30940
aurora correlation, var. strengths 4=23817
and aurora electron precipit. 4=29343
aurora, polar-cap visual, negative correlation 4=2232
and aurora zone satellite scintillation 4=30943
auroral correl. in near-polar regions 2=19237
auroral echo occurrence, correl. with 2=19243
Baker Lake mag. observatory, Canada (1957-8) 2=9039
bays and similar variations, effect of continents and oceans 2=15276
bomb, high-altitude, effects, July 9, 1962 3=11474
"Borok" station magnetotelluric soundings 4=13858
character figure C, rel. to E-region nocturnal ionization and cosmic-ray mesons 4=7922
compensation, using balances 4=8893
conductivity distrib. interpretation 4=26868
and core, eddy motion, non-dipole lifetime 3=13646
correlation with radio-star scintillations 1=21100
correlation with solar filaments vanishing 3=11467
rel. to cosmic ray secular variation 1=13575

Earth—contd
magnetic field, variations—contd
and cosmic ray 27-day vars., 4=30291
and cosmic ray vars., review 4=6165
cosmic rays, daily variation correl. 2=13911
cosmic rays, diurnal variation, effect 2=3442
crotchets, due to solar flares, and ionosphere S_q currents 4=10776
current control, rel. to e.m. wave ionospheric absorpt. 2=7772
current systems due to non-periodic winds 3=3491
daily, S_q^p field in polar region 3=9129
declination, annual change, Western Scandinavia and North Sea 3=11468
dipole, northward shift, and quadrupole stability 3=25944
distant field, long-period (≥100 sec.) oscillations 4=13860
disturbances, rel. to auroral zone chorus bursts 3=1481
disturbance, rel. to auroral X-ray event 3=23630
disturbances, catalogue, July 1961 3=18529
disturbances, dynamo theory 3=3490
disturbances, during IGY and IIPY, gross nature 3=11473
disturbances, rel. to ionosphere jet current 3=5212
disturbance lines, prediction 3=25952
disturbances, moon influence 3=13840
disturbances, from nuclear explosion, July 9, 1962 3=23649
disturbances rel. to simultaneous auroral luminosity 3=23634
diurnal, lunar effect near equator 3=9128
diurnal, two methods of study 2=15272
diurnal variation at high latitudes (Charcot and Dumont d'Urville) 2=17214
diurnal variation of K indices, 1940-48 1=21091
diurnal variation at sea 2=24058
earth current pulsations, regular 2=21677
rel. to earth current S variation 3=23579
earth—ionosphere cavity resonance, meas. and theory 4=2318
and earthquake forecasting 4=13705
in eclipse 4=26875
eclipse, solar, n.m.r. meas. 4=2316
effect on ionization drift in ionospheric F-region 3=13763
effect on Joule heating in ionosphere 2=15224
effect of moon 4=2327
effect of oceans 1=21099
effect of ring current 20 000 km from earth's centre 1=6651
effects of trapped high-energy ions 3=23641
e. m. field fluctuations, in upper atmosphere 3. 0 to 0. 02 c/s 4=7941
electromagnetic field, method for processing records 4=4823
electromagnetic field pulsation rel. to high atmospheric phenomena 1=15346
electromagnetic field, pulsations during July 1959 solar events 1=20800
electromagnetic field variations, coast effect 4=26869
electromagnetic, 1c/s—1kc/s 4=23813
electromagnetic, shore effect 4=23814
due to electrons, high energy, from nuclear explosions 3=9085
equatorial electrojet 2=11093
equatorial electrojet, description and effect 1=21082
equatorial electrojet, longitude variation 3=6999
equatorial, lunar and solar geomag. tides 3=1479
equatorial micropulsations 2=15279
equivalent planetary amplitude, rel. to f_0F2 at night 2=9005
equatorial, 26 month period? 4=23815
equatorial, 26-27 month periodicity 3=5225
exosphere distortion rel. to cosmic rays variation 2=3442
due to explosion, nuclear, high-altitude 3=16306
and explosions, nuclear, high altitude 4=15899
explosions, nuclear, high altitude, double impetus 3=25961
and explosion, nuclear, high-altitude, short time delay 3=23616
flare-storm time delays, effect of pre-storm conditions 3=7002
fluctuations on earth and in space 2=13080
fluctuations with frequencies of torsional oscillations 3=23645

Earth—contd
magnetic field, variations—contd
fluctuation measurement 1=12024
fluctuations rel. to outer van Allen belt form 1=15357
fluctuations, rel. to radiation belt trapped particles 2=19255
fluctuations, in regions remote from high-altitude nuclear bursts 3=23646
in France, after nuclear explosion (9 July 1962) 2=24063
geomagnetic activity, assoc. with aurora ionospheric and telluric currents 3=13832
geomag. disturbance and atmospheric ozone, relation 4=4757
geomag. pulsations, simultaneous observation with ionospheric observation 1=2577
geomag. variations, 12-16 Nov. 1960 1=10340
giant, geomag. conjugate relationships 4=4827
giant, and pulsating aurora 3=25956
giant pulsations, frequency—time analysis 4=13862
giant pulsations, types and mechanisms 4=7947
H and D components, conjugate point relationship at high latitudes 3=13711
"high-frequency" (> 1 c/s) variations 1=6649
horizontal component, diurnal range, rel. to equatorial electrojet 4=2237
horizontal field, fluctuations, (1-50) × 10^{-5} G, up to 2 hr duration 2=11092
horizontal intensity variations, world wide, rel. to SSC and SI 2=13070
hydromagnetic waves, generated by nuclear explosion, July 9, 1962 3=21075
index K p and cosmic rays, semidiurnal amplitude and phase 3=17374
rel. to infrasonic pressure waves, auroral zone 4=13839
intensification rel. to ionospheric turbulence 3=3516
interpolation and analysis, potential method 4=4822
and ionosphere f_0F_2 lunar tides 4=20875
rel. to ionospheric oscillations 4=17954
ionospheric storms, SD and Dst variations 3=23609
irregular, in H field 3=1488
Joule heating increase in auroral zone during disturbances 2=21668
Joule heating in upper atmos., correl. with 2=19209
K index duration independence of lat. 4=26870
K_p index, rel. to plasma and mag. pressure 3=23651
K-indices of activity, March-May (1962) 2=21679
K-indices, diurnal varn. on disturbed days, 1949-57 3=9126
K-indices of geomag. activity, March-April 1963 3=25950
local disturbance in high latitudes, frequent occurrence 4=23816
long period fluctuations, rel. to mantle conductivity 4=13771
low-latitude region, solar daily variation 3=1480
lunar semidiurnal, Cape Town and Hermanus 3=23644
lunar semi-diurnal and sudden commencements 3=25949
magnetic bay theory, rel. to positive ion currents 1=21093
near magnetic equator, disturbance daily variation 3=25941
m.h.d. transverse waves in dipole mag. field 4=27622
magnetohydrodynamic wave obs. by 1959 δ2 (Explorer 6) 3=9127
magnetometer for 0.1—10 c/s oscillations 4=13858
magnetospheric boundary motions and surface activity during Explorer 10 flight 4=10774
measurement of inclination, archaeological, by C^{14} radioactive dating 4=26877
measurement of inhomogeneities 4=20877
measurement, 0.1-10 c/s 3=18572
measurement, using proton precession recording magnetometer 4=11742
meteor effects 3=13844
micropulsation frequencies, 0. 5 to 3 sec variations, rel. to mean field intensity 4=4825
micropulsation signals, classification 2=19257
micropulsations 1=9208
micropulsations, and auroral bremsstrahlung meas. 2=4703
micropulsations, in auroral zone 2=9040
micropulsations, in auroral zone, rel. to conjugate-point studies 3=25957
micropulsations, auroral-zone of 5-30 sec 2=9040
micropulsations, at Brisbane, Queensland 3=13833-4

Earth—contd
  magnetic field, variations—contd
    micropulsations, classification, at Univ. British Columbia 2=13085
    micropulsations near coastline, polarization 3=9928
    micropulsations, concomitant aurora and ionospheric absorption 1=15345
    micropulsations, detector calibration 1=21088
    micropulsations, equatorial, rel. to disturbance currents 2=24033
    micropulsations, fine structure, trapped particle theory 3=25954
    micropulsations and the ionosphere 1=21096
    micropulsations, rel. to ionospheric ionic concentration 2=21642
    micropulsations, long period, production of ionospheric currents 4=10772
    micropulsations, night-time, rel. to meteor rates 4=10773
    micro, nomenclature 3=25953
    micropulsations, notation and classification 4=2325
    micropulsations, rel. to nuclear explosion, over Johnston Is. 3=23647-8
    micropulsations, from nuclear explosion, July 9, 1962 3=23650
    micropulsations, obs. in very high latitudes 4=4826
    micropulsations, rel. to outer atmosphere oscillation 2=15261
    micropulsations, p. c. type, general characteristics 4=10770
    micropulsations, pearl-type, fine structure 3=13831
    micropulsations (pearls), periods 0.3-3 sec 2=19268
    micropulsations, in Philippines 3=25940
    micropulsations, rapid periodic, distrib. rel. to amplitude 4=2324
    micropulsations, regular and irregular, classification and notation 4=17959
    micropulsations, review 3=485
    micropulsations, Ru vapour magnetometers 4=27603
    micropulsations, simultaneous conjugate point expt. 2=4692
    micropulsations, spatial coherence 2=6961
    micropulsations, spatial variations 2=24057
    micropulsations, studies 1=21090
    micropulsations, survey 2=11091

porous polycrystals, var. of Youngs modulus with porosity 4=17708
powder porosity, contact cross-section and Young's modulus reln. 4=23542
pulverized materials 2=12840
Pyrex, effect of neutron irrad. and pressure 2=792
pyrite 3=23280
pyroxenes 4=20682
quartz, around $\alpha \rightleftharpoons \beta$ transform. temp. 3=15990
quartz bars, Young's modulus from flexural vibration meas. 2=1222
quartz, electric field change tensor, d.c., from reson. freq. changes 3=23009
quartz fibres, fused, Young's modulus variation with diameter 1=1298
quartz fourth order, from non-linear acoustic reson. effects 4=16179
quartz, fused, γ-irrad. 0=16203
quartz, neutron irrad. 0=11967
quartz resonator, polarizing field effect 2=16796
α-quartz, temp. coefficients 2=21393
quartz, zero-field, from acoustic propag. 2=23727
reduction after plastic deformation, models 2=18982
resilient materials, static and dynamic determination 0=18235
resorcinol 0=633
L-rhamnose monohydrate 0=13650
rhombohedral crystals, c_{13} constants 1=6443
rigidity modulus and fusion process 0=16920
road layers, measurement, theory and technique 2=4301
Rochelle salt, effects of radiation damage 3=10883
rocksalt, annealed, neutron irrad. 0=18242
rubber 1=12577
rubber, dynamic props., 0. 01-4000 c/s 2=21392
rubber, dynamic results., rel. to crystallinity 1=14861
rubber-like materials, dynamic shear modulus and damping factor 0=6289
rubber, shear mod., from acoustic meas. 1=16024

Elastic constants—contd
rubber, synthetic, method of meas. 0=10270
rubber, Young's modulus, pressure effect meas. 4=7454
rutile, moduli, ultrasonic meas. 0=13902
salicylidene aniline crystals 4=22781
sapphire, 1=1290
sapphire 1=20297
sapphire, synthetic, at 27°C 3=11131
semiconductors of diamond, blende, wurtzite types 3=23279
semiconductors, diamond type 3=1214
shear modulus, rect. concrete beam, freq. depend. 0=6853
shear, Ni—Co alloys, effect of magnetic annealing 3=8681
silica, anomaly with heat capacity 0=11580
silica, fused, Young's and rigidity moduli rel. to large tensile strain 4=28979
silica, Young's modulus, temp. depend. —195 to 540°C 0=13900
sintered metal powder compacts, u.s. method 0=1841
soap-solution films, rel. to their surface tension 1=15828
solid solutions, interstitial, with b.c.c. lattice 2=23893
solid solutions, interstitial b.c.c., rel. to solute conc. 1=20613
solids, Debye temp. calc. method 3=20110
solids, pressure-dep. meas. by u.s. interferometer 3=223
solids, relationship with thermal expansion 3=11130
static and dynamic, annealed and heavily cold-worked metals 0=6298
steel, cast C, effect of heat treatment 0=4485
steel, shear, under pressure, annular specimens 3=6784
steels, depend. on tensile stresses values 3=3210
steels, effect of temp. and alloying 3=13328
stretched polymers 0=18251
strongly compressed matter, lattice moduli 1=17434
styrene derivatives and copolymers 0=8257
substance with cubic symmetry under very high pressure 0=16208
superconducting and normal states 2=7507
at superconducting transition, changes 2=7508, 7518
terpine monohydrate crystals 0=13952
θ (elastic) rel. to θ (calorimetric) near T = 0°K 4=28343
III-V compounds, rel. to lattice consts., hence Debye temp. 3=22666
triglycine sulphate, near Curie point 3=13323
triglycine sulphate, effect of d.c. field 2=14623
triglycine sulphate, effect of γ-radiation 3=17949
u.s. measured, rel. to coeffs. of solid eqn. of state 2=16578
variation detection, by transverse u. s. waves 4=13363
variation of elastic moduli at superconducting transition 1=11884
Vicalloy II type alloys 1=6343
viscoelastic linear media 2=15518
whisker crystals, review 2=18974
wurtzite and zinc blende, model 1=20300
Young's modulus, Cu, Ag and Au, decrease after deformation and recovery 4=15703
Young's modulus, exponential temp. depend. for oxide crystals 1=10204
Young's modulus, high values in some glasses 1=20635
Young's modulus, meas., above 2000°C in vacuo, thin rod reson. 3=20693
Young's modulus of metals subj. to bending 0=6303
Young's modulus, rel. to other props. 0=9854
Young's modulus, rel. to resonance frequency of uniform bars 0=13905
yttrium iron garnet single crystals 1=11502
zincblende, shear, variation under high-pressure 3=23375
Ag, bulk modulus, rel. to volume, calc. 3=4828
Ag, —183° to 300°C 3=20688
Ag, rel. to u.s. pulse propagation 3=10592
Ag wires, cold-worked and annealed 2=4335
Ag—Sn alloy, effect of Pb addition 4=28964
Al, adiabatic, at 300°, 77° and 4°K 4=23117
Al, effect of quenched-in vacancies 0=16202
Al f.c.c. point defects by work hardening 1=17523
Al, pressure depend., up to 10^4 kg/cm^2 2=23733-4
Al, recovery after plastic deform., dislocation effects 4=20651
Al single crystal plates, Young's modulus 0=8106
Al single crystals, 4.2-300°K 4=13390
6061-T6 Al 3=17667
Al, Young's modulus, pendulum method 3=11135
Al alloys, elastic modulus, electrocapillary effect 4=4438

Elastic constants—contd
Al—Mg alloys, temp. depend. 0=1931-2
Al_2O_3, Young's modulus, exponential temp. depend., 77-850°K 1=10204
Al-rare earth alloys 2=17032
AlSb, c.w. resonance technique 0=13897
Au, cold worked, dynamic moduli meas. 4=1941
Au, dynamic moduli, 4°-300°K, after deformation 3=25613
Au evap. thin films 0=10331
Au, —183° to 300°C 3=20688
Au, in thin single-crystal films 1=1452
Au, transient changes due to quenching 4=23156
Au—Ag, rel. to composition 4=23158
BaF_2 3=18161
BaF_2, u. s. pulse meas., 4.2-300°K 4=28937
$Ba(NO_3)_2$ 3=18161
$BaNb_2O_6$—$PbNb_2O_6$ 4=1909
$BaTiO_3$ 4=1909
$BaTiO_3$, elastic energy rel. to phase transition 3=6816
$BaTiO_3$—$CaTiO_3$ 4=1909
$BaTiO_3$—$CaTiO_3$—$CoCO_3$ 4=1909
Be, and lattice vibr. spectrum 3=10578
Be, pressure depend., up to 10^4 kg/cm^2 2=23733-4
Be, shear constants, calc. 2=2312
Be, single crystals, u.s. pulse meas. 0=1840
BeO, dense, anelasticity due to grain boundaries 2=3845
BeO, hot pressed, elastic anisotropy rel. to texture 3=25648
BeO, room temp. 3=5057
bismuth 0=18240
Bi 4=12882
Bi, from u.s. velocity meas. 2=23731
Bi adiabatic stiffness constants 0=16199
Bi_2Te_3 4=13530
Bi_2Te_3, at 300°K 2=8702, 10733
C, glassy and baked, var. with strain amplitude, temp., neutron effects 4=10380
C, polycrystalline, small-strain model 4=23132
C, Young's modulus at high temperatures 4=23131
C steel, stress meas. by X-ray method 4=23097
CO_2, solid, u.s. meas. 0=11965
$CaCo_3$ 2=21390
$CaCO_3$, from velo., u.s. 3=23278
CaF_2 3=18161
CaF_2, calc., closed-shell ion-ion interactions 2=16588
CaF_2, 4-300°K 0=6018
$CaMg_2$ single crystals 2=14868
β-CaZn alloy, 4·2-800°K 3=8752
Cd, 4. 2-300°K 0=13898
Cd pyroniobate, rel. to piezoelectric props. and temp. 4=4459
CdS 0=16027, 21094
CdS, hexagonal, anisotropy and Cauchy relations 1=20299
CdS, hexagonal single crystal 1=20292
CdS, meas. and model 3=8556
CdS, sphalerite form 3=18159
CdSe, meas. and model 3=8556
CdTe, meas. and model 3=8556
CdTe, at 25°C, by u.s. methods 2=2313
Ce, at high pressures 1=3957
Ce, at high pressures 1=10205
Co, effect on magnetic sp. ht. det. 4=25856
Co, free-centre cubic 0=6291
CoFe ferrite, depend. on temp. and mag. orientation, theory 1=9030
CoO, temp. var., anomalies 3=6774
$CoSO_4.7H_2O$, and crystal structure 3=20690
Co—W, during phase transformations 4=17727
Cr, effect of O_2 impurity 1=14853
Cr, results from diffuse X-ray and u.s. techniques 3=23285
Cr, temp. depend., anomalies 3=8753
Cr, Young's, ~ 40°C, effect of thermal and mech. history 4=26501
Cr alloys with Fe, Zr, Be 1=14853
Cr_3C_2—Ni, modulus, dependence on concentration of Ni 1=11500
Cr ferrite, alloyed with various metals, temp. depend. 3=20900
Cr—Ni alloy, effect of temp. and W and Mo admixtures 1=20308
Cr_2O_3, temp. var., anomalies 3=6774

Elastic constants—contd
CsBr, 4.2-300°K 1=1294
CsBr, room temp. to 4.2°K 4=15702
CsBr, 73-300°K, from u.s. velocity 1=12583
CsBr, single crystals, temp. depend. 4=1932
CsBr at 300°, 77°, 4.2°K 3=21501
CsCl-type crystals, elastic and thermoelastic constants 1=20293
CsCl-type crystals, third order 4=1933
CsI, room temp. to 4.2°K 4=15702
CsI, 73-300°K, from u.s. velocity 1=12583
CsI, single crystals, temp. depend. 4=1932
Cu 0=15827
Cu, cold worked, dynamic moduli meas. 4=1941
Cu, cold-worked, irradiated and unirradiated specimens 2=6744
Cu, dislocation contribution 0=3154
Cu, dynamic moduli, 4°-300°K, after deformation 3=25613
Cu, effect of electron irrad. 3=796
Cu, effect of interstitial atoms 2=16643
Cu, effect of neutron irrad. 3=5059
Cu, elastic regions near zero applied stress 4=10375
Cu, elastic and shear moduli 4=17707
Cu, electrodeposited thin-walled tubes 1=5079
Cu, Mc/s range, 4.2-250°K, dislocation damping 1=3955
Cu, modulus changes after deformation at 4.2-78°K 2=18981
Cu, neutron bombard. 0=8103
Cu, 99.99% pure, elastic modulus, electrocapillary effect 4=4438
Cu, after plastic deformation at 4·2° K 3=8757
Cu, recovery after plastic deform., dislocation effects 4=20651
Cu, third-order constants, tabular data 1=2501
Cu, variation with hydrostatic pressure 1=2503
Cu, Young's, beta ray effects, low temps. 4=10376
Cu, Young's modulus, effect of electron irradiation 0=6294
Cu—Ag, from u.s. velo., wedge method 3=23276
Cu—Ag, Cu—Sn, Cu—Zn alloys, effect of Pb addition 4=28964
Cu—Au alloys, rel. to ordering 3=20685
Cu—Au, from u.s. velo., wedge method 3=23276
Cu_3Au, ordered and disordered, 4·2-300°K 1=20294
Cu_3Au, rel. to increase of Debye temp. 1=11255
Cu_3Au, Young's modulus rel. to ordering 4=7488
Cu—Mn alloy, Young's modulus, effect of thermal ageing 1=1297
Cu—Ni alloys 1=1289
Cu—Ni, from u.s. velo., wedge method 3=23276
Cu—Pb, from u.s. velo., wedge method 3=23276
Cu—Sb, rel. to composition 4=23158
Dy, temp. depend. 2=744
Dy, temp. depend. 3=5017
Dy, temp, var. 3=6711
Armco iron, elastic—plastic props. 3=9540
Fe, α, and Debye temp., effect of alloying with Mn, Mo, Si, C 4=6750
Fe, rel. to dislocation damping 2=21405
Fe, effect on magnetic sp. ht. det. 4=25856
Fe foils, rel. to dislocation movement 3=17702
Fe, 4.2-300°K, by u.s. pulse technique 1=10203
Fe, pressure depend., up to 10^4 kg/cm^2 2=23733-4
Fe, shear modulus, rel. to deform amplitude 3=6779
Fe, sintered, meas. 2=16945
Fe, third-order constants, tabular data 1=2501
Fe, variation with hydrostatic pressure 1=2503
Fe—Al alloy, rel. to atomic order and ferromag. props. 3=25605
Fe—Al alloys, rel. to quenching temp. 2=6715
Fe Al, Young's effect of degree of order 2=4308
Fe_3Al, Young's modulus, effect of order 2=4308
Fe-base alloys, Young's modulus rel. to Ni and Co content and temp. 4=17736
Fe—Co—Cr alloy, ferromag. anomaly, temp. depend. 2=23732
Fe—Ni alloys, ΔE effect 1=1299
Fe—Ni (70/30), changes on heat treatment, u.s. detection 1=7813
Fe-Ni alloys, magnetic contribution 0=11874
Fe—Ni—Cr alloy, ferromag. anomaly, temp. depend. 2=23732

Elastic constants—contd
Fe—Ni—Mo alloys, Young's modulus rel. to Mo content 4=17737
α-Fe_2O_3, effects of temp. and mag. field 2=6714
α-Fe_2O_3, magnetoelasticity 3=25523
Fe_3Pt alloy, Young's modulus anomaly at Curie point (71°C) 0=11972
Fe-Rh alloy, Young's modulus 4=26314
FeS_2, by thermal agitation 2=10731
$FeSO_4.7H_2O$, and crystal structure 3=20690
α-Fe—W, Young's mod., W-conc. depend. 1=4060
Ga, temp. depend. 2=744
Ga, temp. depend. 3=5017

splitting of e.s.r. lines of Cr^{3+} in ruby 4=26387
on stability of liquid jets 0=8618
static field, suppression of secondary drop formation 0=8645
steels, components migration, in d.c. field 1=12655
on sulphides, α-scintillations 0=16105
suspension in liq. under shear, drop coalescence 2=12984
on viscosity, dipolar gases 1=18440
water drops, on disintegration 4=24153
water drops, supercooled, on freezing 4=11403
water drops, supercooling 4=368
water, heat transfer from fine Pt wires 4=8200
Ag migration, in Ag, in d.c. field 1=14319
Al flakes orientation suspended in gas 0=10360
Al—Fe alloy, ion velocity rel. to ion charge 1=20625
Ar—Cs plasma, heating to 3000-4000°K 4=27545
Ba desorption from W 3=3360
BaO, desorption from W by elec. field 4=7722
effects, $BaTiO_3$, motion of 90° wedge domains 1=17842

Electric fields —contd
effects —contd
$BaTiO_3$, phase transformation, from e.s.r. of Fe^{2+} 4=10324
$BaTiO_3$, transition points 0=20958
$Br^{79,81}$, I^{127} nuc. quadrupole res. in halogenated benzene and nitrobenzene 4=1312
CdS and CdSe, photoconductivity 2=6496
CdS, d.c. pulses, on u.s. absorption 2=3833
in CdS, effect on light absorption 0=8006
CdS, effect on photoconduction 2=12542
CdS, high fields, electro-optical and dielectric breakdown 2=8308
CdS, under high load, high-temp. layers formation 2=4100
CdS, luminescence quenching and enhancement 4=15617
CdS single crystals, on spectral characts. of quantum yield 4=26144
Cr ions, paramagnetic reson. and relax. 3=18126
Cr—Fe alloys, components migration, in d.c. field 1=12655
Cr_2O_3, magnetization induced by elec. field 3=15739
Cr_2O_3, magnetization induced by elec. field 3=15740
Cr_2O_3, magnetization, temp. depend. 1=20160
$(Cr_2O_3)_{0.8}.(Al_2O_3)_{0.2}$, magnetization induced by elec. field 3=15740
Cs desorption from W 3=3361
effect on CsI:Tl scintillation 2=4188
Fe particles e.s. acceleration 0=11989
Fe—Al alloys, Al and Fe migration 1=14300
Fe—Al alloys, Al and Fe migration in d.c. field 1=15163
Fe—Al alloys, self-diffusion 4=25968
Fe—C alloys, Fe migration, temp. depend. 1=12657
Fe—Mo alloys, components migration, in d.c. field 1=12655
Fe—Mo alloys, Mo migration in d.c. field 1=12656
Fe—Mo alloys, Mo migration, temp. depend. 1=12657
Fe—W alloys, W migration, in d.c. field 1=12655
GaAs, n.m.r. of $Ga^{69,71}$, linear Stark effect 3=8735
Ge, electron mobility var., and phonon 4=9835
Ge, photoconductivity, quenching, 1.8-2.5 μ, freq. depend. 3=17959
Ge, photon emission 3=855
Ge p—n junction, absorption edge shift, for light modulation 4=26193
H, levels and elec. moment, calc. 4=25481
H^- ions, mean life against dissociation 3=12083
H_2^+, dissociation by variable strong fields 1=2947
He^-, dissociation by variable strong fields 1=2947
He II, ion motion in rotating He 4=14499
HgI_2, shift of optical absorpt. band edge 2=10583
In diffusion, in Ge 1=14307
InSb, electron mobility, influence 1=8954
Kr, luminescence, X-ray excited, increase 3=16664
Li precipitation in Ge 4=10425
MgO, creep increase 4=7433
in MgO, generation of dislocations 0=9897
Mn ions, paramagnetic reson. and relax. 3=18126
MnF_2, F^{19} n.m.r., frequency shift 1=20262
NaCl crystals, on photostimulated exoelectron emission 4=24721
effect on NaCl solution surface tension 2=11347
Ni thin films formation 0=8283
PbI_2, shift of optical absorpt. band edge 2=10583
PbS films, work function 4=11684
PbS photosensitive layers, e.m. wave absorption rel. to conductivity 4=1736
$PbZrO_3$, ferroelec. props. 3=13118
S, photoelectret polarization in darkness, initial 3=25411
Sb diffusion, in Al 3=22830
Sb diffusion, in Ge 1=14307
SbSI, absorption edge shift 3=20468
Si, rel. to absorption-edge displacement 2=23554
Si, absorption of light 1=1153
Si, diffusion of Ga, internal elec. field effects due to Sb 4=28484
Si, p—n junction, excess reserve currents 3=22960
Si real surface, electrical properties, 190°-620°K 4=10066
Si, surface states, a.c. field 2=10480
Si surfaces, d.c., a.c. and pulsed fields 4=1620
W, surface migration, activation energy 0=11646
Xe, luminescence, X-ray excited, increase 3=16664
ZnCdS phosphors, field enhancement, variation with frequency 0=4457
effects, ZnCdS:Mn luminescence intensification 1=20015

Electric fields—contd
effects—contd
ZnCdS:Mn, luminesc., prior sensitization 3=10994
ZnCdS:Mn, luminescence, by X-rays a.c. components prod. by 10^4V/cm at 400 c/s 3=15710
ZnS, absorption edge shift in elec. field 1=19988
ZnS, α-particle scintill. quenching 3=13208
on ZnS electrets, luminescence 0=16092
ZnS, luminescence due to γ-rays 3=8629
ZnS, luminescence quenching and enhancement 4=15617
ZnS phosphors, cathodolumin. 3=3065
ZnS:Cu:Mn phosphors, electroluminescence 0=10083
ZnS:Mn, luminescence, by X-rays a.c. components prod. by 10^4V/cm at 400 c/s 3=15710

- ice, dissociation, proton and deuteron cond. 4=15844
- interfacial solns. of Poisson-Boltzmann eqn. 1=20749
- ion adsorption on Pt, study 2=15105
- ion-exchange membrane systems, diffusion-exchange of exchange ions and nonexchange electrolyte 0=4714
- ion pairs, diel. constant and conductance 2=17094
- ionic hydration energy, Na^+, K^+, Mg^{2+}, Ba^{2+}, Cl^- 1=15196
- ionization differences between coordination states of cation 2=15153
- ions, dipoles in elec. field, equilib. distrib. 2=12972
- isotope separation by counter current column, simplified theory 4=19999
- light regulation by electrochemical stratified zones 2=11463
- liquid—junction potential redox meas. 3=23546
- metal electrodes in insulating liquids, effect on high-field conductivity 0=14642
- metallic solns., binary liq., activity coeffs. at infinite dilution 4=7766
- metals, soln. in NH_3, e.s.r., effect of adding electrolyte, 3=11811
- molecular complex form., organic, by electron transfer 3=21003
- moving boundary expt., nonequil. thermodynamics 2=15146
- nonlinear media, 2nd and 3rd order elec. cond. tensors 2=22308
- oscillator, 3.9 c/s, cell with series resistor 4=13729
- oxides, binary, ion and electron conductivity meas. method 4=4704
- Peltier effect, electrolytic 2=23484
- Peltier effect, electrolytic, rel. to inactive ions 2=17089
- pH electromech. stat., with bidirectional control 4=29223
- pH titration apparatus, automatic 3=8941
- phase boundary reaction mechanism 2=12976
- phase boundary reactions, potentially depend. impedance spectrum 2=12956
- phenol/water activity coeffs., calc. 4=4721
- photovoltaic cells with ion—exchanger membrane electrolytes 4=2163
- Poisson—Boltzmann eqn., numerical soln. 0=3315
- polarization systems, nonequil., statistical mechanics 4=2578
- polyelectrolyte—simple-electrolyte interaction parameter 1=20748
- polyelectrolyte solns., interaction of neighbouring charged groups 3=21345
- polyelectrolyte solns., volume effect theory 3=21346
- polyions and low molecular ions, interaction 1=20750
- polymer solution as semi-permeable membrane for concentration cells 4=26755
- polynucleotide, pH titration curve 0=4249
- potential—time meas. in 40—80 mμsec range 1=4105
- potentiostat, electronic, for currents up to 5A 1=4538
- "potentiostatic pulse" method, ohmic fall compensation 3=8969
- rate processes, potentials and affinities 2=12974
- semiconductor—non-aqueous electrolyte interface, electronic exchange 1=1483
- semiconductor, with two electrolyte contacts 3=18446
- semiconductors, electron chemical potential 3=2873
- sodium/tin liquid-metal cell 3=1926
- solion diode 3=16887
- solutions, electron exchange 2=17092
- solvatized electrons in frozen solutions 2=19151
- sound sawtooth wave propag. in electrolytes 1=18517
- steel, potential-time curves during stress cracking 1=1485
- test charge motion in rapidly oscillating field 2=22309
- test for distinguishing between W, Mo and NiCoFe 3=9311
- tetra-n-butyl ammonium iodide in CCl_4, contact ion pairs, rel. to added methanol 3=13612
- titrations, h.f., explanation of curve types 0=10377

Electrochemistry—contd

- transition-group complexes, polarographic half-wave potentials 0=21280
- transport, mass and charge, double layer theory 4=15843
- transport phenomena, on irreversible-process theory 3=18757
- transport processes, choice of diffusion currents 4=13728
- Ag, kinetics of deposition and dissolution 0=4713
- AgBr crystals, defect electron transport rel. to Br partial pressure 3=6487
- AgBr—electrolyte systems, photovoltaic effects 2=16758
- AgBr precipitates, adsorption of H^+ and OH^- ions 3=5165
- $AgNO_3$ thermocell, e.m.f. temp. var. 4=15846
- $AgNO_3$—NaBr—$NaNO_3$ system, association constants 2=17093
- Al polishing, growth of oxide spirals 3=1261
- Al_2O_3 film formation 2=10937
- CaF_2, Sm^{++} and Tm^{++} impurity ion valence control 4=23667
- Cd, activity with respect to Tl 3=23548
- $Cd(Hg)/Cd^{2+}$ (1 m $NaClO_4$), kinetic eval. 2=12976
- Cs, soln in NH_3, e.s.r., effect of adding CsI 3=11811
- CsPb chloride, transition from tetragonal to cubic 2=19029
- GaAs, n- and p-type 2=16754
- Ge cathode reduction in aq. solutions, rel. to free carriers 2=23966
- Ge in contact with aqueous solution, potential distrib. across low-index crystal planes 3=10788
- Ge—electrolyte interface, fast surface states, formation by cupric ions 4=6973
- Ge—electrolyte interface, surface states 3=10780
- Ge—solution interface potential 0=14124
- Ge—H_2SO_4 boundary capacity, var. with electrode pot., meas. 4=30904
- Ge—NaOH solution interface, surface conductance 3=10781
- HF solution, electrodialytical separation of radioactive components 1=20751
- Hg—electrolyte interface, theory 1=4104
- In + As → InAs cells, and InAs thermodynamic props. 4=25850
- InSb, thermodynamic props. from electrolytic cell 0=10354
- K, soln. in NH_3, e.s.r., effect of adding KI 3=11811
- K hyaluronate, electromech. effect during flow in solutions 2=858
- Li ions, countercurrent electromigration in molten LiBr and LiI, isotope effect 0=1959
- MgO, electrical conduction in electrolytic cell 0=21283-4
- Na, soln. in NH_3, e.s.r., effect of adding NaI 3=11811
- Na^+—K^+ conc. cells 4=26756
- Ni deposition on Au, electron microscope study 1=2554
- $PbCl_2$—KCl melt, double layer, capacity 3=3400
- Pd, dehydrogenated, free energy 0=16379
- Si, anodic dissolution 2=857
- Si, electrode potential in solution 1=20744
- Si, removing thin layers by anodic oxidation 4=28448
- Si solutions in HF, props. 0=10353
- Si-KOH boundary 3=6923
- Ta_2O_5 film formation, effect of Frenkel defects 1=20675
- Te—Tl alloys, molten, props. 0=10355
- Tl, dilute solutions, loss of material 2=12977
- $Tl(Hg)/Tl^+$ (1 m $NaClO_4$), kinetic eval. 2=12976
- Zn in Zn salt solns., Peltier effect 4=7768

electrodes

- adsorption of organic mols., rel. to potential 2=4499
- amalgam, equilib. pot. 3=25832
- anodic oxidation, ion transport mechanism 3=13616
- anodic oxide film sealing on Al X-ray exam. 4=17841
- "Armco" iron, radioactive, potentials 3=16175
- boundary layers, total reflection of light 4=2160
- capillary, and stable liquid junction 0=4715
- charge injection into organic crystals, effects 2=14579
- charged double layer, equilibrium 0=5255
- composite electrode, mixed and local potl. 3=13609
- diffuse double layer theory extension 4=13733
- diffusion layer study, radioactive exposure method 2=6889
- diodes, theory 1=12678
- double layer, charged interface structure 3=21002
- double layer structure, cluster theory of fluids 4=2161
- effect of material nature on electrode polarization 1=6572
- electrode potential correl. with atomic radii of metals 1=1487
- exchange currents, liquid electrodes, and vibr. modes 4=20834

Electrochemistry—contd
- **electrodes**—contd
  - gas electrode, impedance 3=16166
  - glass, cation sensitivity 3=3401
  - ideally polarizable, rectification effect 3=16179
  - kinetics, symmetry factor theory 3=13607
  - luminescence, Al, near anode and cathode, flash spectra 3=10984
  - masking technique, metals and semiconductors 4=23662

  - metal migration 3=9690
  - metal solutions, electrode movement rel. to motoelectric effect 2=8923
  - multiple, kinetics of stationary state 3=18447
  - photovoltaic effect in binary compounds 0=9985
  - polarization, sinusoidal, appl. of Lagrange's theorem 3=5169
  - polarograph with electric charge meas. using radioactive Ag 4=7763
  - polarographic microelectrode, oxygen-sensitive 1=12683
  - porous, current distrib. analysis 3=13614
  - porous, current distrib. calc. 2=19152
  - porous, polarization theory 4=29226
  - potentials of semiconductors in solution 1=7915
  - quartz transducers, metal film 1=10362
  - reference, for molten nitrate solns. 2=17095
  - for semiconductor anodization, small 4=20833
  - semiconductor electrodes, cathodic processes 1=20746
  - space charge, dielectric const. freq. var. 4=30905
  - steel-2, radioactive, potentials 3=16175
  - surface preparation for studies of elec. props. of dielectrics 4=5532
  - temperature, coeff., from interface potential 4=10644
  - temperature compensated, for O_2 meas., design and performance 4=10645
  - valency meas., by radioactive Ag microcoulometer 4=7764
  - Al_2O_3 formation, u.v. luminesc. 3=8615
  - Au, spreading of Hg on surface, capillarity 2=7187
  - $CaCO_3$ (calcite), potential rel. to calomel 3=8968
  - $Cd/Cd^{2+}/Cd$—Bi e.m.f. 3=23548
  - Cu, single crystals, potential, in H_2O, NaCl solns., effect of illum. 3=18451
  - Cu, in $CuSO_4$ soln., transient strain-induced electrode potls. 1=6571
  - Fe, anodic activation 3=13611
  - Fe, overvoltage and H diffusion through, X-ray study 0=8309
  - Ge anode, electro-oxidizing reaction 0=6411
  - Ge cathode in 2 mol HCl electrolyte, surface states 3=17689
  - Ge, effect of illumination 0=21286
  - Ge, electrochemical processes in cathodic polarization range 0=21281
  - Ge, electrode potential in various electrolytes 1=17677
  - Ge-electrolyte interface, fast and slow surface states 4=7762
  - Ge-electrolyte interface, impedance, frequ. depend. 3=18445
  - Ge, ferricyanide reduction and hole injection 2=4017
  - Ge, in H_2SO_4 solns., with oxidizing agents 0=8310
  - Ge, p-type effect of surface states on elec. props. 3=21001
  - Ge, photosensitivity rel. to quantum energy, erratum 4=22798
  - Ge, surface recomb. rate, potential depend. 3=20304
  - Ge, surface state, during anodic dissolution 3=16177
  - Hg, adsorption at interface 3=1380
  - Hg, capacity, rel. to polarization model 2=8922
  - Hg, drop formation 0=14612
  - Hg, dropping, double-layer capacitance meas. 3=14476
  - Hg dropping, mechanical props. 3=1393
  - MnO_2, structure and properties, use 0=4716
  - $Na_2O—Al_2O_3—SiO_2$ glass, electrodes cation sensitivity and durability meas. 3=3401
  - $Na_2O—B_2O_3—SiO_2$ glass, electrodes cation sensitivity 3=3401
  - Ni, adsorption of thiourea, rel. to potential 2=4499
  - Ni, Raney diaphragm resistance 4=26758
  - NiO, proton diffusion meas., rel. to alkali cation 2=14462
  - Pb electrode, smooth, capacitance 3=16178
  - Pd, overvoltage and H diffusion through, X-ray study 0=8309
  - $(Pd\text{-}H)_{\alpha s}$, effect of $H_2—D_2O$ isotope exchange 2=4546
  - Pd-H electrode 2=10987
  - Pd—H soln. in constant current, anodic oxiation 3=5166

Electrochemistry—contd
- **electrodes**—contd
  - Pt, differential capacity, frequency var. 4=15845
  - Pt, in KNO_3, $KNO_3 + NaNO_3$, double electrical layer, impedance 3=16168
  - Si anode, luminescence in electrolyte 2=4192
  - Si anodization, anodic oxide films, P-doped, preparation and props. 4=26713
  - Si contacting electrolyte, surface recombination 1=1068
  - Si and Ge, impedance by electrolyte interface 3=18444
  - Si monocrystal/NaOH soln., current—voltage characteristics 0=6115

- Zr, anodic film, structure 3=23507

Electromagnetic fields
(Heading introduced in 1963).
- accelerator cavity field from periodic beam, calc. 4=24764
- in anisotropic layer, build-up 4=14864
- asymptotic expansion of electric vector fields 4=3099
- asymptotic integral invariants 3=18706
- baryon interaction, in Rayski manifold 3=4334
- book, e. m. theory 4=8037
- build up, basic prospecting parameters 4=16623
- cavity, meas. by perturbing sample 4=16650
- in cavity, spherical, in dissipative medium, with central dipole 4=14878
- charge creation, two theories comparison 4=3103
- charged filament moving past system of conducting half-planes 4=27617
- circular loop at earth-air boundary 4=30026
- coherence, definition formula 3=19437
- conservation law of ten new extensive quantities 4=19161
- covariant expansion 3=5818
- and crystal lattice vibrs., interactions 4=28346
- current source in anisotropic medium, by Fourier analysis 4=27634
- in curvilinear orthogonal coordinates, sine var. fields 4=16647
- cylindrically symmetric fields 3=472
- e.m. field diffusion in conducting medium, equiv. network study 3=506
- dipole, harmonic, on multilayered anisotropic earth, e.m. field 4=16661
- dipole, vertical magnetic, above earth's surface 3=19439
- dipole, vertical, in void over gyrotropic medium 4=8902
- of dipole wave, weakly guided 4=14901
- earth, a.f., 140 c/s, effect of cond. inhomogeneities 3=16230
- Einstein-Maxwell field equations solutions 4=14017
- electric dipole, l.f., on conducting half-space 3=14740
- electron moving on world line, generalized equations 4=14870
- electron scatt., polarization change, relativistic calc. 4=3292
- electron, uniformly moving, rel. to wave eqn. 3=10089
- elliptic cylinder, inside, carrying d.c. 4=30023
- energy-momentum tensor in external grav. field 4=45
- in excited or stationary media, integro-differential eqns. 3=2088
- fluctuating, stochastic props., correlations, connection with quantum theory 4=27616
- fluids in motion, summary of results 4=14866
- geometric model about charged particle 4=657
- Green tensor functions in anisotropic media 4=660
- guiding centre Hamiltonian, canonical eqns. 4=14865
- half-space representation 4=24797
- high, 100, 250 and 400 kG magnets 4=649
- historical evolution of concept 4=655

Electromagnetic fields—contd

- horizontal mag. dipole, near magnetoplasma half-space 3=21978
- of infinite slot in infinite cylinder surrounded by plasma sheath 4=21660
- inside layer with negative absorption coefficient 3=14796
- interaction with low-energy, low-density plasma 4=14661
- interaction with plasmoid, higher multiple moments 3=24290
- levitation effects in axially-symmetric system 3=24434
- localized charge—current distrib., asympt. props. 4=11759
- loop carrying a.c. current above cond. layer 4=14863
- magnetic dipole, effect of prolate spheroidal core 3=24436
- magnetic dipole oscill. parallel to axis of infinite cylinder 3=19417
- magnetodielectric disturber, energy changes 3=21945
- measurement using thin coil spring 4=8926
- molecular group, three-body dispersion energy 3=20032
- moving charge, quantum calc 4=29533
- moving media, two, boundary conditions 4=661
- non-singular, associated with Bonnor vacuum grav. field 3=16519
- from nuclear explosions, underground 3=11380
- nuclear magnetic resonance, in crystals 3=20666
- occurrence in quaternion quantum theory 3=16524
- origin, dynamical, in quantum electrodynamics 4=5921
- of particle, charged, in uniformly accelerated motion 4=14868
- particle vibration damping in periodic field 3=9911
- penetration from anisotropic medium into ellipsoidal anisotropic inclusion 4=3100
- Petrov types of vacuum metric, theorem 3=3713
- photon red shift 4=21817
- plasma, absorption resonances in mag. field 3=7614
- plasma, fluctuations 3=21769
- plasma, heating, magnetoacoustic reson. 3=7613
- plasma, magneto, air interface, current line sources parallel to interface 4=680
- plasma maintenance and stabilization 4=29937
- in plasma, non-magnetic quasineutral, calc. 3=12296
- for plasma stabilization, in fusion devices 4=8728
- probe, photoconductive 4=3097
- propagators and commutators 3=3733
- quantization 3=7765

Sputnik III, radio transmissions 2=7047
statistical ensemble of signals, average functions 4=5815
statistical parameters rel. to fading characteristics 4=24829
statistical theory for data analysis 3=502
step functions, over conducting medium 2=17955
stratified flat conductor, mag. field at surface 3=4243
in stratified media, e.m. wave functions 4=16663
in stratified random media 4=24831
sudden frequency deviations, induced by solar flares 4=2270
surface excitation and propagation 0=11036
along surface of laminar conducting medium 0=19927
surface waves on plane interface 1=13180
Tellegen medium, anisotropic, drifting, calc. 4=8931
terrestrial waves, zonal harmonics theory 3=5855
theory, dyadic Green's functions 3=21971
along thin plasma sheet 1=376
through metal disk arrays, phase change 0=5407
total e.m. cross-section of imperfectly conducting cylinders 0=12698
transformation at conductor boundary, in magnetic field 2=72
transformation at conductor boundary, in magnetic field. 3=208
transhorizon loss, rel. to surface refr. 3=513
transmission coeffs for one-dim. inhomogeneous slab 4=21652
transmission delay line, using Permalloy film 3=14732
transmission by grating, transparent sinusoidal profile 4=21654
transmission by metals in mag. fields 0=7228
transmission, optimum conditions, rel. to Beer's law 3=24041
transmission, through parallel slits in cond. screen 0=5406
in transparent medium, nonlinear interactions, eqns. 3=24468
u.h.f. through aurora with moon as reflector 2=11809
uniaxially anisotropic regions, theory 4=14883-4

Electromagnetic wave propagation—contd
unidirectional, anisotropic medium, thermodynamic paradox resolution 4=687
use of Echo I balloon satellite 1=8030
v.l.f., diurnal var., seasonal evolution 3=9945
in vacuo, deflection of ultra-relativistic particles 2=7731
variable media, boundary value calc., quasi-static series, improvement 3=24461
velocity, poss. gravitation var., from planetary radar meas. 4=16028
Venus, cloud layers, microwaves 4=7858
vertically polarized waves in horizontally stratified medium 4=3142
wave beams, coherent, optical relations 4=11372
wave-front velocity in theory with higher derivatives 0=2439
West Ford dipoles, lifetimes 1=18221
whistler-mode, man-made, one-hop, 18.6 kc/s, phase path variations 4=13809
whistler mode propagation in dense plasma (in Zeta) 0=10916
wire grid between two media, equiv. impedance 2=16057
wire grids, theory review 2=17959
Bi, magnetoplasma waves at liq. He temps. 4=9927
Bi, transmission, 1.4°K, mag. field var. 4=26177
Ge, hot electrons, harmonic generation 3=21969
Ge, magnetoplasma reson., microwave 3=2893
Ge, TE_{01}, calc. for exp. decaying carrier density 4=28689
in H plasma, magneto-ionic theory 2=5483
He discharge, microwave props. study 2=15899
He gas discharge, 35 and 10 kMc/s, rel. to mag. field 3=4031
He, highly-ionized, microwave transmission 2=17821
Hg, depolarization of ${}^3F_4$ level and coherent transmission, calc. 4=28143
InSb, at 10 000 Mc/s, helicon waves 2=20160
Li films, reson. electron spin diff. transmission 4=26203-5
$MnCl_4 . 4H_2O$, magnetic double refraction α length 4=28696
$MgTiO_3$ disks in microwave cavity 3=13112
Na, magnetoplasma resonance, satellites 3=25259
Ne plasma-filled cavity, Faraday effect 4=18894
Si, TE_{01}, calc. for exp. decaying carrier density 4=28689
Sn film, supercond., non-linearities 4=21429
TiO_2 disks in microwave cavity 3=13112
YFe garnet, dispersion and magnetoacoustic waves 4=28365
YFe garnet, resonances in waveguide, effect of freq. modulation 2=6685

atmosphere
absorption of cm wavelengths 0=4786
amplitude and phase fluctuations, correlation 3=19458
amplitude and phase spectra of radio-atmospherics 3=25891
angels, rel. to high-level temp. inversion 3=1452
using atmospherics, v.l.f. attenuation 0=16488
atmospherics, v.l.f., "distorted", magnetic anomaly effects 4=13803
attenuation coeff. calc., rel. to atmospherics integrated field intensity 4=17901
attenuation and emission, 58–62 Gc/s 4=13810
attenuation rates, daytime from atmospherics study 0=12716
auroral, phase characteristics 2=16065
auroral proton radiation, theory 1=15305
auroral, television reflections 2=17967
auroral-zone absorption effects on an HF Arctic path, rel. to cosmic noise absorption 4=26831
back-scattering by ice spheres, cross-sections 4=8950
backscattering, by water bubbles, of 3.21 cm waves 2=1603
broadcast transmissions, scatter by meteor trails, confusion with solar r.f. bursts 2=13179
circularly stratified, focusing and defocusing effects 0=17115
through continuously varying stratified anisotropic medium 4=24854
defocusing in troposphere 2=16068
diffraction by inhomogeneous layers 3=19457
directional aerial reception, high frequency 4=29303
diurnal phase variation of v.l.f. waves at medium distances 4=17907
e.l.f., below inhomogeneous, anisotropic ionosphere 4=16668
e.l.f. waves, effect of underground polarization 1=19039

- Ag, field, effect of crystal defects 2=20015, 22246
- Ag–Mn, exo-emission 0=2383
- Al, abraded, photo-stimulated exo-emission of electrons 1=16356
- Al, exo-emission 4=19077
- Al, exo-emission after mech. working or X-irradiation 1=16374
- Al, exo-emission on plastic deformation 1=12590
- Al exoemission, temperature effects 1=13098
- Al foil, stretched, exo, photo-stimulated 3=7627

Electron emission—contd

- Al, liquid, exo-emission due to O_2 and N_2–O_2 gases 0=15049
- Al, photostimulated electron emission on reaction with NaOH or KOH 1=16376
- Al, plastically deformed 0=1143
- Al, plastically deformed, exo-emission 2=5367
- Al, tribo-emission, temp. depend. 1=5489
- Al, u.v. induced 2=7638
- Al–Al_2O_3–Al films, tunnel emission 2=13579
- Al—Al_2O_3—Al tunnel cathodes, energy distrib., retarding, field meas. 3=19301
- Al—Al_2O_3—Au—Ba, var. with Au, Ba thickness 4=8799
- Al–Al_2O_3–Pt films, tunnel emission 2=13579
- Al_2O_3, field emission 1=13099
- Al_2O_3 layers, photostimulated exo-electron emission 1=16375
- Al oxide surface, exo-electron glow curves 4=3017
- $Al_4(OH)_8$–Si_4O_{10}, -100° to 300° C 1=18915
- Au, u.v. induced 2=7638
- Ba cold cathodes, effect of pulse discharges 0=19711
- Ba dispenser cathodes, W-based, fluctuations 1=16365
- Ba layers on W_2C, field emission 1=20692
- Be, tribo-emission, temp. depend. 1=5489
- BeO, exo-emission 0=2383
- Ca, tribo-emission, temp. depend. 1=5489
- CaF_2, coloured crystals 0=6192
- CaO, thermostimulated emission 3=419
- CaS, exo-emission rel. to thermoluminescence and trapping levels 2=16877
- $CaSO_4$, exoemission rel. to thermoluminescence 3=2013
- $CaSO_4$:Mn, exo-emission 0=2383
- $CaSO_4$–Mn exoemission rel. to thermoluminescence 3=2013
- CdS, field emission 1=11962
- CdS, field emission 2=11687, 13580
- CdS films, cold emission 4=21556
- CdS, internal field emission, dielec. breakdown mechanism 2=4098
- CdS, nonequilibrium, effect of illumination 3=16971
- CdS, during passage of elec. current 2=11686
- CdSe, nonequilib. electrons 3=21853
- CdTe, field emission 3=421
- Cs diode, electrode materials and performance 2=7660
- CsCl, exoemission spectrum 3=14618
- Cs_2O and Cs_3Sb cathodes, photoemission rel. to polarization 1=18912
- Cu, chemoemission, rel. to oxidation and reduction up to 600°C 3=2012
- Cu, exo-emission 0=2383
- Cu, exo-emission after mech. working or X-irradiation 1=16374
- Cu field, effect of crystal defects 2=20015, 22246
- Cu, in vacuo 3=5690
- Cu, single-crystal faces, work function, temp depend. 4=8795
- Cu–Be, exo-emission 0=2383
- Cu—Cu_2O, internal field emission, into vacuum 1=4633
- Cu_2O, exo-electrons 0=1142
- Fe, exo-emission 0=2383
- Fe, magnetized, field emission, electron polarization 2=7639
- Fe_2O_3, exo-electrons due to γ-irradiation 1=18919
- GaAs cathode coated with Ag—O—Cs layer, emission efficiency 4=8805
- Ge, Auger electrons, by ion bombard. 0=13600
- Ge, exo-electron emission 0=5337
- Ge, exo-electron emission, effect of N 1=16358
- Ge, field emission, relaxation processes 0=6094
- Ge, rel. to heavy-hole Landau system 2=23132
- Ge, "hot" electron emission 2=20017
- Ge, "hot" electron emission 3=2017
- Ge, hot electrons, rel. to hot current carriers 3=10791
- Ge layers on W, field emission 2=7640, 9613
- Hg, field emission in cathode spot mechanism 2=13554
- Ir, field emission 1=16359
- KBr:In, exo- and photoemission 2=4167
- K, on Pt wire, and ion emission, abrupt changes 4=11689
- KCl, additively coloured, photoemission 3=24336
- KCl, exo-emission glow curves rel. to time 1=18920
- KCl, exoemission spectrum 3=14618
- LiF crystal, exoemission from X- and α-irradiated specimen 4=26206

Electron emission—contd
- LiF, thermo- and photostimulated, meas. 2=20013
- Mg, tribo-emission, temp. depend. 1=5489
- MgO, cold 4=19078
- MgO cold emission, effect of gases 2=22245
- MgO, exo emission 0=2383
- MgO, thermostimulated exoemission 3=419
- NaCl, exo-electron, rel. to coloration 2=12469
- NaCl, exo-emission, effect of retrapping 2=22244
- NaCl, exoemission spectrum 3=14618
- NaCl and Z-centres 2=6390
- NaCl:Cd, exoemission at 300-700°K 1=4998
- NaCl:Cu, exo- and photoemission 2=4167
- NaCl:Cu, meas. 3=18008
- NaF, thermo and photostimulation 2=20013
- Nb, field emission in normal and supercond. states 1=18910
- Ni, exo-emission after mech. working or X-irradiation 1=16374
- Ni, whiskers, field emission, elec. meas. 2=8799
- Pb, photostimulated electron emission on reaction with NaOH or KOH 1=16376
- Pt, field, effect of crystal defects 2=20015, 22246
- Pt, u.v. induced 2=7638
- RbCl, exoemission spectrum 3=14618
- Rh, field emission 1=16359
- Si, Auger electrons, by ion bombard. 0=13600
- Si, effect of treatment in Cs vapour 0=19716
- Si, field emission characteristics 1=8341
- Si, field emitters, current density-field relationship 2=11688
- Si, hot electrons, rel. to hot current carriers 3=10791
- Si, in low fields, rel. to V–I characteristics 0=1145
- Si, n-type, hot electron emission 4=15543
- Si, p–n junctions 0=2376
- Si, p–n junctions, high-energy 3=883
- Si p–n junctions, hot electron emission 3=13087
- Si, p–n junctions, hot emission 4=7003
- SiC crystals, from pn-junctions 1=17756
- SiC p–n junction 2=2182
- silicon carbide p–n junction emission 1=7658
- SiC, p–n junctions 1=16360
- SiC p–n junctions, by Au diffusion, 20°-400°C 4=569
- SiC, p–n junctions, high-energy 3=883
- SiO$_2$, field emission 1=13099
- Sn, exo-emission after mech. working or X-irradiation 1=16374
- Sn, photostimulated electron emission on reaction with NaOH or KOH 1=16376
- Sr–Ba titanates, exo-emission 0=10932
- Te, in low fields, rel. to V–I characteristics 0=1145
- ThO$_2$ coated filament emitters, poisoning and activ. 4=21560
- Th oxide films 2=9618
- TiO$_2$ (rutile), field emission onset 0=13579
- W, with adsorbed inert-gas layers, field emission 0=19713
- W, clean and Ba-coated surface 2=17862, 20012
- W crystals, photoelec. Schottky deviations 3=21863
- W, field emission, emitting area 2=13581
- W, field emission, 4·2-400°K 1=18909
- W, field, temp. depend. at low current densities 2=13583
- W, heated field emission cathode, elec. stability and life 0=9068
- W point, field emission, time depend. 0=3783
- W points, laser induced 4=8811
- W, shadowing of electron-microscope specimens 3=11329
- W single crystal, field emission preceding vacuum arc 1=16362
- W, single crystals grown for emission studies 2=21485
- W in thermionic convertor, rel. to CsF atmosphere 4=18662
- W, thoriated, as arc cathode 3=9755
- W-SiO$_2$–SiO$_2$-C surface, field emission 1=5490
- Y hexaboride 0=1879
- Zn, exo-emission 0=2383
- Zn, exo-emission after mech. working or X-irradiation 1=16374
- Zn, photostimulated electron emission on reaction with NaOH or KOH 1=16376
- ZnS single crystals, outer field emission 0=261
- ZnS:Cu, activated, exo-emission 3=956
- **field emission**
  - (subheading introduced in 1963).
  - for detecting dielectric impurity films on metal, after positive ion absorption 4=23562

Electron emission—contd
- **field emission—contd**
  - diamond, type I, in α-counting 4=9324
  - field emission and elec. breakdown between Ni surfaces in vacuum 4=24724
  - field emission in glow discharges 3=373

  - Ru, hexagonal, meas. 4=11691
  - Si 3=24332
  - Si, direct meas. of energy 3=4176
  - Si, energy distribution 4=19081
  - Si, energy distrib. of electrons, band gap. 3=8509
  - Si p–n junction 3=14621
  - Si, into SiO$_2$ film, conductance meas. 4=20393
  - Si, strong p-type, energy distribs. 3=12232
  - Si tips 3=12231
  - Si, work function rel. to Fermi level 4=3021
  - SiO$_2$ + C 3=21851
  - Ta cathode, use in microtron 4=8801
  - Ta–Ta$_2$O$_5$–Al films, cold emission 4=11690
  - W, adsorption and desorption of Ge 3=8928
  - W, effect of O$_2$ adsorption on work function 4=3024
  - W, energy distrib. 3=12232

Electron emission—contd
field emission—contd
W, microscopy, gas adsorption study 3=13568
W point cathode, contaminated, for detection of single ions 4=21196
W, prior to destruction, by high-density autoelectronic current pulses 3=7630
W, temp. depend., for 10^{-14}-10^{-10} amp. 4=16519
W, 10^{-10}-0.1A, rel. to crystallog. directions 3=14620
W-tip cathode, build-up phenomena, study 3=19298
W tip in ultra-high vacuum 3=12228
ZnS and electroluminescence, voltage var., distrib. 4=21558
secondary
air, negative corona discharge 4=14613
alkali halides, bombarded, with K ions 2=20051
alkali halides, bomb. with K ions 3=5723
alkali halides, energy spectrum fine structure 0=10941
alkali halides, for low energy primary electrons 0=2882
alkali halides rel. to optical absorption band transitions 3=22694
alkali metals bombarded with 2500 eV neutral atoms 2=15949, 17875
anthracene films, inelastic scattering 0=15058
backscattered electrons, contrib. to secondary electron formation 1=3006
beam monitors 2=15950-1
brass target, bombard. by brass and quartz grains 4=8826
cathode covered with emissive materials, possible mechanisms 4=19091
cathode-ray tube screens, beam modulation applications 3=24351
coefficient rel. to primary electron energy for twenty solids 2=1493
cold pure metal cathodes, influence of rolling texture 0=7150
dependence on crystal orientation 0=1154
diamond, electron bombard. 0=17033
dielectric films, oscillographic investigation 0=3794
dielectric layers, positively charged, internal elec. field effect 4=29967
from dielectrics, low primary energy, study 0=7145
dielectrics, meas. method 2=1489, 7654
and discharges, electric, insulator surface 3=19226
discharges, h.f. l.p. 3=14551
dynode, field enhanced, for high-speed counting 2=18008
in electron beam monitors, anomalous 4=27570
electron monitor, 15-70 MeV, efficiency 4=6026
energy and angular distribution, criticism of Guba's work 3=7639
energy and angular distrib. of secondary electrons 2=22255
energy and angular distrib. of secondary electrons 3=2022
energy distrib. by ions and electrons traversing thin foils 0=5342
energy distrib. meas. by retarding field method 3=2023
experimental techniques and results 4=5701
flicker noise 1=8350
fluctuation phenomena 4=8078
glass, bombard. with H^+, H_2^+; H_3^+, He^+, A^+ 1=1909
glass, bombard. with H^+, H_2^+, H_3^+, He^+, A^+ 1=4638
glass, by He and A ions 0=10939
glass, review 1=7682
graphite, pyrolytic, cleaved in vacuum 3=9841
high-energy, low-Z targets calc. 4=24737
ice films, inelastic scattering 0=15058
image converter for emission microscopy 0=19800
image intensifier 0=10757
image intensifier, transmitted sec. electron multiplication 0=7142
image intensifier tube, "multipactor" type 3=19325
image intensifiers, transmission 2=18010
insulators, free from surface charge disturb. 3=9845
insulators, meas. by low-noise ballistic impulse amplifier 3=14635
ion bombardment effects conference 2=10423
by ion bombardment, mechanism 0=19805
by ion bombardment, theory 1=16392
ion-electron emission from metals; theory-expt. 0=2384
ion—solid interaction, low energy, Auger-type 4=19093
ionic crystals, temp. depend. 2=7652
by ions, effects of angle of incid. in electron microscopy 2=13600
by ions, in emission micr., sputtering 3=14642

Electron emission—contd
secondary—contd
Maier-Leibnitz expt., due to 2^3S and 2^1S He atoms incident on collector 4=19984
Malter effect, cause of photomultiplier fatigue 4=8819
measurement of normal velocity distrib. at low primary energy 2=1490
measurement, thin foil 4=21602
metal layers on an activating under-layer 0=7148
metal surfaces, clean, bombarded with H ions 2=3077
metal surfaces, by high-energy molecules 4=11700
metal targets, bombarded ions 10-110 keV 2=1494
metal targets, bomb., with positive ions 0=9078
metals, atom-induced, theory 0=1151
metals, on electron bombardment, energy distrib. 3=12240
metals, due to fast-moving ions or neutral atoms, theory 2=1491, 7655
metals, free electron model 3=4184
metals, due to H^+, H, He^+, He, calc. 3=7638
metals, by H, H_2, H_3, Li, N, N_2, Ne, Ar, K, Ca and Cs in bombard. 4=8822
metals, by high-energy ion and atom beams, calc. 2=5377
metals, under ion bombard., ejection mechanism 0=15061
metals, with inelastically scattered primary electrons, meas. 0=7146-7
metals, inert gas ion bombardment, up to 50 keV 4=8824
metals, by light ion bombardment, rel. to ion mass 4=8825
by metals, photon irrad., 35-1250 keV 3=14831
metals, positive ion bombard., theory 0=1150
metals, props. rel. to periodic system 2=5376, 7657
metals, scattering and transport equation 1=10735
metals, theory 1=5493
metals, various, and back scattering 0=12634
microprobe Castaing 3=7637
microscope, contamination removal by ions 3=9864
molec. ions on metal surface, Townsend's 2nd coeff. rel. to molec. mass 4=19092
multiple emission, statistical distrib. meas. 4=27567
multiplier, 16-stage, open-type, characteristics 4=8823
multiplier with Venetian-blind cathode 3=24341
multipliers, efficiency meas. without flux meas. 3=14640
neutralization of fast positive ions on metal surface 0=19808
oxide cathodes, positive ion bombard. 0=10938
oxide-coated cathodes, bombarded by charged particles 1=11963
photocathodes, complex, quantum yield 4=8809
photocathodes under X-rays 2=13589, 17866
photographic film dosimetry, use in 3=14831
photomultipliers, statistical effects 2=15947
polar crystals, escape mechanism, theory 3=2021
polyethylene, due to γ-irrad., energy spectrum 1=13120
polymers 0=17032
positive-ion bombard., meas. of emission coeff. 4=3036
by positive ions on metal surfaces, distribution function 3=12239
proportionality to energy dissipation by electrons near solid surface 1=3005
in quartz tube, by electron beam passage 2=15952
range of slow secondaries in metals 1=18925
by rare gas ions, 1-10 keV, meas. method 3=9843
reflected electrons, role, assessment 1=18926
reflected electrons, role, assessment 2=3078
resonance discharge, steady state by return mechanism 4=16532
resonance mechanism in decimetre wave range 3=428
resonance process, in h.f. discharge breakdown 3=24264
resonant cavities and dielec. surfaces, effect of Ti films 2=22256
scanning elect. mic. study 0=1763
semiconductor as continuous multiplier 2=17881
semiconductor layers in pick-up tubes, mechanism 1=321
semiconductors, props. rel. to periodic system 2=5376, 7657
semi-empirical relations for solids 2=15948
single crystals, variation with angle of incidence 0=7149
spatial depend. of excitation effect, theory 4=14753
spectrum calc. for boundary layers 3=24345
stainless steel, Li^+ bombard. 1=8345
suppression, by covering surface by small cylinders, calc. 3=7636
surface effect, rel. to surface photoelec. effect 4=19090
theory 3=19321
with thermionic emission 0=7167

Electron emission—contd
secondary—contd
thin film insulators, field effects 2=9625
transient electron effects, mechanisms 4=17454
by transmission, thin films 0=15062
transport of excited electrons, integral eqn. 4=8829
transport process theory, elementary scatt. model 4=14752
use in aiding Li^+ beam extraction from solid source 0=7169
use for amplification of small currents 4=16533
use in molecular beam detector 2=12355
rel. to work function in solids 0=2374
Ag 0=5341
Ag, rel. to temp., 20° to 450°C 3=427
Ag—carbon foils, Li^+ bombard. 1=8345
Ag—Mg, under Li bombard. 1=4565
Al, by Ar^+ at 0.5-10.0 keV 3=9843
Al, contrib. of backscattered electrons 1=3006
Al, rel. to electron energy dissipation near surface 1=3005
Al films, rel. to primary beam losses 4=9936
Al foils in high energy beam monitors 4=8827
Al, due to γ-irrad., energy spectrum 1=13120
Al, γ-ray irrad., slowing-down spectrum 3=24345
Al, inelastic scatt. effects 2=1492
Al, by 1 MeV proton bombardment 2=1495
Al, relativistic electron bombard. 0=19729
Al, by relativistic primary electrons, meas. 3=16979
Al target, bombard. by brass and quartz grains 4=8826
Al thick targets, bombarded by 1 Mev protons 3=24344
Al—Mg alloys, effect of rare-earth admixtures 3=24342
Al—Mg target, bombard. by brass and quartz grains 4=8826
Al—Mg oxides, var. current 4=19094
Au black and polycrystalline Au, total emission coeffs., comparison 4=27566
Au, Ge, Cu, X-ray excited, energy distrib. rel. to photo-electric emission 4=8808
Au, by 1 MeV proton bombard. 2=1495
Au, due to Po^{210} α-particles and fission fragments 4=5700
Au thick targets, bombarded by 1 MeV protons 3=24344
Au, thin samples in tension, N and A ion bombard. 0=19731
$AuCu_3$ 2=17879, 20021
Ba, inelastic scatt. effects 2=1492
Ba layers on Si and Be, rel. to layer thickness 4=11701
BaO films, on W, at low primary energies 4=582
from BaO by noble gas ions 2=9626
BaO, at 1-100 eV primary energies 2=1498, 7653
BaO, on various cores, temp. depend. 2=1497
$BaTiO_3$ 1=13122
Be 0=5341
Be, on glass, thickness depend. 1=13123
Be, inelastic scatt. effects 2=1492
Be, by 1 MeV proton bombard. 2=1495
Be thick targets, bombarded by 1 MeV protons 3=24344
BeO films, effect of mech. strain 1=7093
BeO films, effect of mech. strain 1=10736
BeO layers 3=24337
Bi 0=5341
Bi—Cs layers of various compositions 0=12629
C, rel. to electron energy dissipation near surface 1=3005
C, by relativistic primary electrons, meas. 3=16979
Ca 1=4639
Ca 2=17877
Ca, inelastic scatt. effects 2=1492
CdO, discrete energy losses 0=9076
CsCl, by K ions, 40-7000 eV 3=16978
Cs—Ge layers, varying composition 2=7651
Cu, bombarded by low-energy ions 2=11704
Cu films, rel. to primary beam losses 4=9936
Cu, due to γ-irrad., energy spectrum 1=13120
Cu, by H_1^+, H_2^+, H_3^+ ions at 1-30 keV 3=24347
Cu, on ion bombardment 4=27565
Cu on ion bomb., ang. var. 4=21565
Cu, by 0.5-10.0 keV rare gas ions 3=9843
Cu, by 1 MeV proton bombardment 2=1495
Cu, from (100) faces, ang. distrib. 0=12633
Cu single crystals, Ar ion induced electron emission coeff. anisotropy 4=3035
Cu single crystal, ion-electron coeff. anisotropy 4=25983

Electron emission—contd
secondary—contd
Cu, rel. to temp., 20° to 450°C 3=427
Cu thick targets, bombarded by 1 MeV protons 3=24344
Cu, for 3 crystal planes, by Ar^+ ions 3=9844
Cu, var. Ar^+ ion beam angles, drop for high atomic densities 4=14754
Cu—Al—Mg alloy, coated with MgO 0=15060
Cu—Al—Mg dynodes, patch fields 0=15063
Cu—Be electron multiplier as detector of weak ion currents 3=454
Cu—Be, H^0, H^+, H_2^+ and H_3^+ bombard. 0=2329
Cu—Be, under Li bombard. 1=4565
Cu—Be alloys, Li, B and N ions bombard. 0=267
Cu—Be, yield under $H^{0,+}_{1,2,3}$ bombard. 4=8828
CuO, in continuous multiplication 2=17881
GaAs 2=17879, 20021
GaAs, rel. to local elec. field regions 4=3040
GaSb, surface structure and props. 1=4078
Ge, Auger electrons from He^+ and Ne^+ neutralization, adsorption effects 1=10737
Ge by Cs, K, Li and H ions 1=11966
Ge, Cs-vapour treated 0=7139
Ge, and electron elastic reflection, single crystal study 0=12631
Ge, energy distrib. of electrons 3=2023
Ge, on glass, thickness depend. 1=13123
from Ge and Si 1=18924
in H theory 2=17880
H_2, by 50-100 keV protons, cross-section 3=14641
H_2 gas, bombarded by 100 keV protons 3=19177
He gas, bombarded by 100 keV protons 3=19177
from He metastable atoms on W, Mo and Pt 0=2727
by Hg atoms, evidence of metastable state 4=25596
in Hg vapour glow discharge, photon contribution 1=9531
Hg vapour in uniform field, phonon and metastable atom contrib. 4=18683
I 2=11701, 13592
In, solid and liq. state 0=1149
InSb 2=17879, 20021
InSb, surface structure and props. 1=4078
K 2=17877
KBr, emission region thickness and efficiency 3=19323
KBr films 4=8820
KBr, by K ions, 40-7000 eV 3=16978
KBr, monocrystals 0=12628
KCl, on Au and Be, thickness depend. 1=13123
KCl, emission region thickness and efficiency 3=19323
KCl films, field-enhanced 4=11702
KCl films, transmission, time dispersion, upper limit 4=14755
KCl by Li and K ion bombardment (0·05—6keV) 1=11965
KCl, monocrystals and films 0=12628
LiF, electron-and α-excited 1=8344
LiF, by K ions, 40-7000 eV 3=16978
MgO, rel. to elec. cond. and work function 3=14637
MgO films, on Ca, Al, Mg 2=11702, 12593
MgO, relativistic electron bombard. 0=19729
MgO, single crystals, effect of primary beam angle of incidence 0=19730
MgO, substrate material effect 3=19322
MgO, thin self-supported films 2=9624
Mo, by Ar atoms and ions 3=9842
Mo bombarded by argon atoms and ions 2=13591, 17876
Mo, on electron bomardment at 100-1000 eV, energy distribs. 3=12240
Mo, by H_1^+, H_2^+, H_3^+ ions at 1-30 keV 3=24347
Mo, due to He^+ and Ar^+, 0.1-2.5 keV 3=4185
Mo, due to Hg ions, coefft. calc. 4=8625
Mo, incandescent, Cs and K ion bombard. 0=15059
Mo, at low primary energy 2=1490
Mo, 0.5-10.0 keV rare gas ions 3=9843
Mo, after 7 keV electron bombard. 0=268
Mo, Zn and Cd ion bombard. 0=12632
Na films, on Ta, A ion bombard. 0=19728
NaCl, rel. to blue and yellow coloration 2=9623
NaCl, electron- and α-excited 1=8344
NaCl, electron bombard. 0=17033
NaCl, emission region thickness and efficiency 3=19323

- from $\pi^0 \rightarrow e^- + e^+ + \gamma$ decay 0=2532, 13017
- from π^--proton interactions, internal pairs 1=13477
- polarization correlation rel. to finite nuclear seige 2=13778
- production, amplitudes for $\gamma + \gamma \rightarrow e^- + e^+$ 0=17260
- production, in C, O and Al, on absorption of 10-30 MeV γ-rays 0=17618
- production, in C^{12}, 7. 656 MeV level, nuclear emission 0=9573
- production, in charged particle collisions, cross-sections formulae 0=9345
- production, by circularly polarized γ-quanta 0=9329, 11150
- production correl., by polarized photon 2=13777
- production, by cosmic-ray muons, expt. and theory 1=19178
- production, in Coulomb field, by heavy particles 1=7231
- production, cross-section for e^--e^+ collision, 2-spinor model 1=13395
- production, cross-section in Na^{22}, rel. to Zn^{65}. 0=4082
- production cross-sections from γ-p interactions 2=20288
- production in crystals, angle of divergence 1=19760
- production, direct, by electron showers 0=9475
- production, direct, by electrons on Cu foil 0=7339
- production, direct, by high-energy α-particle 0=354
- production, direct, by high-energy electrons, spurious tridents 0=9344
- production, dispersion relations, virtual Compton effect 0=9324
- production, in e-p collisions, as short-distance quantum electrodynamics test 2=20321
- production, in electron field in liq. hydrogen 0=11149
- production, by electron in passing from vacuum to semi-inf. medium 0=20113
- production, in emulsions, screening effect 0=12911
- production, by fast charged particles, effect of multiple scatt. 0=11151
- production, in high-density media at high temp. 0=12709
- production, by high-energy electrons, number of pseudo-tridents 1=2045
- production, by high-energy muons in Pb 0=3961
- production, at high photon energies, for Thomas–Fermi and Hartree atom 0=5551
- production, hole theory 0=17314
- production, internal, real quasi-process 1=7230
- production, low-energy 0=17315
- production, by μ-mesons, 8-120 BeV 0=2531
- production, from $\mu^+ \mu^-$ decay, polarization effects 0=11191
- production, by neutrino in nuclear field 0=12913
- production, by ν-nuclei scatt. 2=20380
- production, and one-photon annihilation in dispersive medium 0=20114
- production, by photon absorption in metals 0=5534
- production, rel. to photon polarization meas. 2=9813
- production, by photons, quantum field theory 0=7277
- production, by photons, radiative corrections 0=9346
- production, by π^- capture in H 0=20187
- production, from π^--mesons captured in H_2 2=5716
- production, in π^- + p capture reactions at rest 0=15393
- production, on protons, effect of form factor and meson "jacket" 0=2538
- production, pseudo-tridents cross-section, for bremsstrahlung 1=5716
- production, quasi-real process method 0=7278
- production, rel. to Sauter theory of atomic photoelectric effect 0=2514
- production, in Si single crystal, by 1 GeV γ-rays, orientation depend. 0=7340
- production by 16 GeV/c pions 2=22492
- production at $>10^{11}$ eV 1=9744
- production theory, not using Dirac "hole" 3=22112

Electron pairs — contd

- radiative corrections to pair production at high energies 1=490
- relativistic pairs,polarization correlation 1=19179
- relativistic pairs polarization correlation 2=22493
- relativistic, rel. to π^0 structure 1=10901
- from Σ^+ decay 0=5613
- $\Sigma^+ \rightarrow p + e^+ + e^-$ 1=19278
- $\Sigma \rightarrow p+e^++e^-$ 2=22649
- spectrometer, formation coeff. det. 3=14966
- spectrometer, high-resolution methods 0=2632
- spectrometer, for up to 1 GeV energy 2=5610
- in stairs, at very high temp. 2=4795
- triplet prod. in emulsion at 90 MeV, momentum and ang. distrib. of recoil electrons 1=16763
- triplet prod. in H_2 at 323 MeV 2=5627
- and triplets, prod. by 5-90 MeV photons 2=3322
- use in precision γ-ray spectrometers 1=2030
- wide-angle, test of quantum electrodynamics at small distances 0=11077
- from $Cl^{35}(n, \gamma)Cl^{36}$, ang. distrib. 4=15214
- H^-e^+ ground state, binding and annihilation 2=10227
- Nd^{142}, 1.57 MeV γ-transition, internal formation 2=1850
- Ni^{60}, γ-transitions, internal formation 2=1850

annihilation

- alkali halides, three-quantum, meas. 4=20259
- alkali halides, time spectra analysis 4=15465
- in alkali hydrides, calc. 2=18406
- in anthracene, disorder effects 1=17524
- in aqueous solutions, 3γ e^+ annihilation speed 1=492
- atom, K-shell electron, single-photon, calc. 4=6461
- cross-section meas. in flight, 2–10 GeV 2=20319
- cyclohexane, solid, positron annihil., temp. var. 3=2774
- $e^- + e^+ \rightarrow \mu^- + \mu^+$, hard-photon emission correction 4=25070
- $e^- + e^- \rightarrow \mu^- + \mu^-$ interactions, possible occurrence 1=5787
- $e^- + e^+ \rightarrow \mu^- + \mu^+$ process 3=14967
- $e^+ + e^- \rightarrow \bar{\nu} + \nu$, at high stellar temps. 1=2636
- $e^- + e^+ \rightarrow \nu + \bar{\nu}$ in stars 1=10875
- $e^+ + e^- \rightarrow \pi^+ + \pi^-$, cross-section restrictions 4=16880
- $e^+ + e^- \rightarrow \pi^+ + \pi^0 + \pi^-$, cross-section 2=5628
- $e^+ + e^- \rightarrow \pi^+ + \pi^- + \pi^0$, overlapping resonances 3=17246
- $e^+ + e^- \rightarrow 3\pi$, 2π, $\pi^0\gamma$, high-energy, virtual vector meson effects 3=17245
- e–p pairs, single-photon process, radiative corrections 0=9346
- 800 MeV, and quantum electrodynamics test 4=27832
- in flight, rel. to γ-ray velocity constancy 3=22098
- in flight, production of monoenergetic γ-beam 1=12074
- in flight, 600 MeV, cross-section 3=7834
- in flight, 200 and 800 MeV 3=7836
- γ-rays emission for electronic structure of metals 0=2776
- gravitational effects 0=2099
- in high-density media at high temp. 0=12709
- high-energy, in H, test of qu. electrodynamics 1=11078
- inert gases, liq. and solid, free-positron mean life 4=4031
- left–right asymmetry for transversely polarized e^+ 2=3323
- in metals, line breadth analysis 1=14234
- metals, perturbation theory treatment 2=20980
- metals, positron lifetime from electron density distrib. 2=12405
- in metals, student meas, of Fermi energy 3=25263
- metals, theory and two-body correl. 3=8412
- neutrino energy spectrum, calc. 4=21843
- neutrino prod. and emission in stars 1=8445
- one-photon process in dispersive medium 0=20114
- into photon pair, radiative corrections to total cross-section 3=2251
- into $\pi^+ \pi^-$, $K^+ K^-$, $p\bar{p}$, $\pi^0 + \gamma$, cross-sections 3=2250
- pion and muon pair prod. 0=15417
- π prod. at high energy, form factors 0=9418
- polarized positrons in magnetized material 0=17316
- positron annihil. in He atoms 3=2252
- positron annihilation in insulators 1=19918
- positron annihilation in organic liquids 0=3959
- positron annihilation in magnetized iron, angular correlations 1=19753
- positron annihilation, use in photon source 0=7320
- positron, to produce monochromatic photons 2=3320

Electron tubes — contd
cyclotron-wave amplifiers, effect of space charge on beam motion and internal orbits 1=8390
demodulation, travelling-wave phototube, theory 4=18371
demonstration characteristics, tracer for valves and transistors 1=5405
demountable, using moulding seal 4=5716
diode, crossed-field injected-beam, d.c. parameters and noise 4=19099
diode, crossed-field, noise transport 4=19109
diode, Cs, I–V curve calc. 4=14763
diode, gas, space-charge-limited emission 3=21869
diode for ionization meas. in combustion 4=4700
diode leak-detector control unit 2=1369
diode, non-linear thermal fluctuations 1=7094
diode, parallel-plane, h.f. 2=11709
diode, plane parallel, electron velocity distrib. 4=11693
diode, plasma, film boiling liquid metal anode 2=17776
diode, Ta tube, Cs vapour, Cs diffusion 2=11705
diode, total emission 2=17882
diode, total emission 3=21867
diode, two-dim., noise transport, Monte-Carlo calc. 4=19110
diode, vacuum, space-charge analysis, ions and electrons 3=21868
diodes, characteristics, rel. to work functions and temp. of electrodes 1=4643
diodes, Cs, 10^5 c/s oscillations 0=15066
diodes, for direct conversion of electricity 3=5618
diodes, electron cyclotron resonance meas. 3=9851
diodes, gas-filled, current for potential discontinuities near electrodes 4=19107
diodes, gas-filled hot-cathode, as h.f. switch 0=12601
diodes, high pressure, low breakdown 4=11715
diodes, high-pres., space-charge limited current relation 3=19329
diodes, h.p., space-charge limited current relation, theory 1=13124
diodes, large-signal h.f., analogue study 0=15069
diodes, with oxide-coated cathodes, anode surface effects 0=7151
diodes, paradox of noise non-rectification 0=7064
diodes, parallel plane, transient space-charge flow 0=19733
diodes, in parl. with capacitors, charge calc., Brownian motion theory 1=1883
diodes, planar flow and Langmuir limit 0=269
diodes, rutile, tunnel field emission 3=9846
diodes, space-charge instabilities 2=1500
diodes, space-charge instabilities 3=24348
diodes, space-charge limited, anomalous flicker effect 0=9094
diodes, space-charge--limited, noise transport 0=10945
diodes, thermionic gas-filled, breakdown phenomena 3=2024
diodes, thermionic, for heat-elec. energy conversion, figure of merit 0=7137
diodes, thermionic, inert gas, elec. cond. after irrad. 3=2026
diodes, thermionic, inert gas, irradiated, negative resistance effects 3=2025
diodes, thoriated W type, use in leak detection 0=14707
diodes, total emission, estimation from characteristics 1=16396
discharge tubes, firing conditions 1=4573
discharge tubes, resonance radiation 0=19629
e.m. and space charge waves in sheath helix 1=16403
Edison's contribution to development 1=1910
electrometer circuit design for meas. of ~10^{-13} amp. 4=14543
electron beam devices, instabilities and growing waves 1=9639
electron beam devices, theoretical problems 1=9638
electron camera emulsions, linearity 2=15765
electron gun, electrodes for converging beam 4=3045
electron gun, with temp.-limited cathode 3=432
electron and ion oscills., low-voltage beam-controlled devices 3=14608
electron multiplier, continuous channel 2=20197
electron multiplier, for flying-by charged parts 2=22363
electron multipliers, using continuous surface 2=17881
electron multipliers, in mass spectrometers 1=4663
electron multipliers, secondary-electron, open-type, operation 4=3249
electron optics in, brief review 3=5703

Electron tubes—contd
electrostatic simultaneous deflection, system, aberration 2=20025
electrostatic thrust engine 0=12333
flame ionization triode 1=16157
focusing, electrostatic 3=5708
focusing, gun, hollow-beam, high-convergence 3=5701
focusing, magnetic, effect of transverse velocities 3=5706
focusing, periodic, annular beams 3=5705
focusing, periodic, field injection conditions 3=5707
focusing, by r.f. fields on slow-wave circuit 3=5709
g_1-g_3 charact. display, 6BN6, circuit 3=21684
gas diode, potential distrib., rel. to ion reflection 3=14509
gas pressure measurement 2=2799
getter flashing with electrode bombardment 4=21201
getter ion-pump 1=11795
glass envelope, coaxial to electron beam, design and constr. 2=20024
glass envelope, coaxial to high power electron beam 2=20024
glass, O_2 outgassing by electron bombardment 4=21204
graphical reproduction of waveforms 0=2298
grid, emitting properties of Ti 0=7134
gun beam density limitations, unipotential guns at low voltages 4=8831
gun, parametric-amplifier 2=9628
guns with curved trajectories, electrode shapes 3=24349
h.f., boundary problem solution 2=5439
h.v., mercury, breakdown voltage 0=12435
heat-elec. power conversion, Cs diode, characteristics 2=209
heater coatings, alundum, leakage currents 0=3796
heater, d.c. supply stabilizer 4=14561
Heliotron B cyclotron resonance, ion, frequency sweep detect. 3=24323
hot cathode ionization gauge, filament life 2=19632
ignitrons, triggering flash photolysis lamps 3=16759
image converter, Sb—Cs cathode, dark emission? 3=9836
image converters 1=7092
image convertors, effect of surface charge on photoelectric emission 1=3003
image convertors, photometry 1=6947
image converters, resolution limits 2=11699
image intensifier for astronomical work 1=5123
image intensifier with electron-optical demagnification 2=1502
image intensifier, secondary transmission type 0=7142
image intensifier tube, "multipactor" type 3=19325
image intensifiers 1=5126
image orthicon, vacuum meas. 4=18293
image storage methods, comparative study 1=5124
image storage tubes 1=5126
image storage tubes and image convertors, conference 1=3004
inhomogeneous mag. fields, exper. study 0=17035
initial characteristics rel. to residual gases 4=24748
ion oscillations, possible energy sources 2=7635
ion relaxation osc. l.f. and h.f. 4=14764
for irradiation of liquid and gas samples, 10-100 keV 4=27568
kinetic energy of diffusing particles 1=18816
klystron, amplifier for linear electron accelerator 2=5397
klystron cavity gap r.f. voltage, meas., by retarding field technique 3=14645
klystron gridded gap 2=11709
klystron, millimetre wave, synchronization with quartz oscillator 4=11790
klystron, phase stabilization system 3=9926
klystron, positive ion, 5 Mc/s 3=9876
Klystron, protection circuit, filament voltage 3=24172
klystron, reflex, frequency modulation at constant power 4=19202
klystron, reflex, as high-speed microwave switch 1=13176
klystron stabilizer, 10 kc/s Pound-type 3=14765
klystron, transistorized frequency stabilization in X-band 4=19201
klystron, two-cavity extended interaction 4=29978
klystrons, r.f. current distrib. in Brillouin flow 0=5347
klystrons, reflex, automatic freq. control 4=3138
klystrons, reflex, effect of mag. field on operation 1=16393
klystrons, reflex, electrolytic tank space charge simulation 0=5349
klystrons, reflex, oscillator frequency stabilization 0=7217

Electron tubes—contd

klystrons, reflex, transistorized frequency stabilization 0=17128
klystrons and t.w. tubes, saturation problems 3=5698
ladderton (m. m. wave oscillator) 4=29979
low-pressure thermionic converter, potential distributions 1=1911
low-voltage with passive cathode cores, emission rel. to anode material 4=21577
M-type, rectilinear, quasi-Brillouin electron streams 2=210
magnetic system for investigation 1=4642
magnetron, Cu, 200 W c.w., residual gas pressure 4=21580
magnetron, cut-off curve, theory 3=14646
magnetron electron guns, exact solution 2=22258
magnetron, electron trajectory 3=430
magnetron, Hall cut-off in strong crossed fields, anomalous violation 4=14765
magnetron injection gun, improved design theory 4=27571
magnetron, plane, cut-off characteristics, expt. 4=16544
magnetron, planotron, high power, review 4=11786
magnetron, statistical theory 3=14647
magnetron types, time-dependent electron flow 0=1155
magnetrons, cut-off, electron space-charge equilibrium 0=12635
magnetrons, electron cloud instability 0=9081
magnetrons, field configuration, electrodynamics 2=3137
magnetrons, inverted, electron trajectories 3=21870
magnetrons, linear, steady-state theory 4=29980
magnetrons, pulse generator for operation 4=428
magnetrons, steady-state-theory 2=5378
microwave harmonic generator 0=3845
monoenergetic electron sources, for ionization and dissociation studies 0=12580
monotron cavities, optimum r.f. field distrib. 2=17883
multi-electrode valves, space-charge limited, general relation among parameters 0=10946
multipactor effect, mechanism, condition for absence of the effect 1=16299
multiplier, electron transit time calc. 4=29981
multiplier, with semiconducting strips as dynodes 1=10738
multiplier with Venetian-blind cathode 3=24341
multiplier, for wide beams of recoil nuclei 2=20196
multipliers, ion beam detection, review 0=3813
multipliers, isotope descrimination in mass spectrometry 2=1526
multistream, nonlinear Hermite function expansion theory, for t.w.t. 4=21646
negative energy propagation concept 0=19925
negative glow plasma as cathode 0=15068
noise in grid-controlled valves 1=7088
non-linear oscillations, theory 0=11037
in nuclear instrumentation, EMI developments 1=3079
oscillating cloud between condenser plates, collective behaviour 4=8840
oscillograph, ultrahigh-speed pulse 3=1914
oscillographs, photographic recording 3=9852
oscillographs, photographic recording 3=16980
oscilloscope, high-speed, with single-direction magnification 1=8351
oscilloscope, high-sweep-speed, single stroke 0=3797
oscilloscope trigger pulse delay 2=22137
Penning-type, space-charge effect on electron kinetics 3=21871
pentodes, flicker noise 1=8349
photoelectronic image intensifiers, review 1=16389
photographic recorder 4=337
photomultiplier, absolute calibration 1=4429
photomultipliers, behaviour to h.f. light modulation 1=2991
photomultipliers, factors affecting gain and resolution 1=2992
photomultipliers, influence of temperature 1=1908
photomultipliers, local sensitivity 0=19726
pick-up tubes, mechanism of emission of semiconductor layers 1=321
Pierce emission systems, current density and transverse velocity meas. 3=4186
Pierce gun, space-charge-limited current, calc. 2=11706
plane emitting electrodes, potl. distrib. 0=7152, 19732
plasma diode, direct conversion of heat into elec. energy 1=18748
plasma diode, Eichenbaum—Hernqvist model 3=9847
plasma diode, kinetic theory for low plasma density 3=14511

Electron tubes—contd

plasma diode, low-density, theory 4=21574
plasma diode relaxation oscillations 1=11969
plasma diodes, cathode processes, as m.h.d. energy converter 3=21816
plasma diodes, kinetic theory 2=11707
plasma diodes, planar, stability 4=443
plasma oscillator 1=5482
plasma thermionic element, theory 0=15067
plasma thermocouple, dynamic behaviour 2=7658
plasmatron, continuous control of electron currents 2=9627
pressed cathodes, surface phenomena 2=11692
probability density meas. with cathode-ray tube 0=2386
pumping out, with double pumping unit 1=4395
r.f. coupling of electron beam by plasma 4=19199
raster segment, jitter-free presentation 2=17761
receiver valve, current through glass envelope 0=17036
receiving tube, physical aspects 2=20023
recent developments, review 2=15954
residual gas, conference 0=19224
residual gas effects on deposited films 4=8273
residual gas meas. 4=21597
residual gases, conference, Milan (1963) 4=11718
Resistron charge-storage, impurity photc and tunnel conduction n—PbS—p—PbO films 3=25419
resonant cavities, secondary electron emission 2=22256
secondary electron multiplier as detector of weak ion currents 3=454
secondary electron resonance discharge, steady state by return mechanism 4=16532
secondary emission flicker noise 1=8350
space charge, equil., current—voltage reln. 4=8841
space charge flow in mag. fields 0=9079
space charge instabilities 1=3007
space-charge-limited current, Poisson eqn. calc. 2=11706
space-charge limited diode, microwave noise 1=8353
space-charge limited diode as noise transducer 1=8352
superopticon, for time sweep of rapid events 3=24352
technical and physical advances 2=15953
tele-focus electron gun 0=2393
television charge storage tubes 1=7091
television transmission tubes, for faint optical image detection 0=8784
thermionic convertor, close-spaced impreg. cathodes, theory 0=10943
thermionic converter efficiency 1=8300
thermionic converter, mag. triode-type, optimization 4=8606
thermionic convertors, oscillation and saturation current measurements 1=8346
thermionic diode, for measuring weak sound fields in gases 4=11313
thermionic diodes, effect of elastically reflected electrons 1=16395
thermionic diodes, effect of radioactive Kr 2=22257
thermionic emission, light from oxide cathodes, analysis 2=11689
thermionic energy converters, ion acoustic oscillations 4=11716
thermionic generators, emission-limited, optimization 1=11967
thermionic power convertors, contribution of anode emission to space charge 0=15064
thermionic power generators, effect of mag. fields 0=19734
thermionic valves, mica outgassing props. 2=21960
thyratron, gas, discharge extinction 3=4188
thyratrons, deuterium-filled 0=7153
thyratrons, firing by intense γ-ray pulses 4=16543
transit-time mode in two-barrier devices 3=431
travelling-field, perm. magnets, field meas. 2=17924
travelling wave amplifers, mechanical analogue demonstration 3=21191
travelling-wave deflection system, velocity modulation and h.f. deflection errors 1=3008
travelling-wave, electron-wave focusing analysis 2=11715
travelling wave, high power, bakeable magnet 3=9908
travelling-wave phototube, expt. analysis 4=18372
travelling wave tube, failure mechanism 4=21578
travelling-wave tube, periodic magnetic fields 2=11716
travelling-wave tube, theory 4=16542
travelling-wave tubes, nonconservation of noise parameters 0=19739

Electron tubes—contd
- travelling-wave tubes, optimal electron focusing, in input waveguide 0=10948
- triode, electrometer tube, logarithmic characteristic 0=2388
- triode, magnetic, for heat—electric energy direct conversion 4=11505

by molecules, electron-impact spectroscopy 4=6520
mols. in gas phase, theory 4=1234
with molecules, inelastic, 80 eV 1=14127
by molecules, theory 4=6521
by molecules, vibrational excitation 2=22948
Møller and Bhabha, depolarization 3=14960
Møller and Bhaba high energy, non-local effects 4=19374
Møller scatt. rel. to and final polarizations 2=9822
Mott scattering, analysis of Co^{60} β longitudinal polarization 0=20382
μ—e decay, polarization 1=16829
μ^--mesons, 8 GeV, meas. 3=10139
on μ-mesons, electrodynamic, rel. to mass splitting 3=5925
μ-meson—electron, radiative corrections 1=3203
μ—e, radiative corrections to order α^3 4=9234
μ-pair production by electron and positron colliding beams 0=17372
multiple, difference for e^+ and e^-, calc. 1=5714
multiple, effect in continuous diffraction curves 0=3207
multiple, in infinite medium 0=2398
multiple, large angles, infinite medium 0=2398
multiple, in nitrogen, rel. to positrons 3=17248
multiple scattering in crystals, high order Born approximation 1=328
multiple, rel. to secondary bremsstrahlung polarization 1=13387
multiple, small-angle, using Molière screening 4=21838
multiple, theory 0=9292
multiple, theory tested using Au foil 0=9388
by neutral gas 2=13601
and ν charge moment meas. method 4=21833
on neutrinos and antineutrinos 0=7336
neutrino and $\bar{\nu}$, by polarized electron, theory 4=16869
of ν_e, $\bar{\nu}_e$, spin correl. calc. 4=21836
n bound in D, poss. inadequacies 3=4118
neutrons, polarization effects rel. to quantum electrodynam. 2=5563
on nonspherical light nuclei, Born approx. 0=9651
nuclear charge distrib., 50-183 MeV/c calc. 4=25378
by nuclear charge distributions, comparison of e^- and e^+ 1=8702
nuclear compressibility from inelastic scattering 1=5824
nuclear dynamic polarization, thermodynamics 4=24096
nuclear E0 transitions, cross-sections 3=17454
nuclear effective charge study 3=7971
nuclear elec. monopole transition excitation, and models 4=25284
nuclear excitation, elec. dipole, orientation effects 4=25290
nuclear excitation, relativistic kinematics, accuracy 4=15199
nuclear excitation, single-particle 3=24858
nuclear giant resonance excitation 3=15181
on nuclear protons, rel. to shell structure investigation 1=19327
nuclear radii determination 0=11306
nuclear recoil in equivalent photon method 2=430
nuclear recoil in equivalent photon method 3=666
nuclear track emulsions, multiple, calc., by c.g. and sum method 3=24567

Electrons—contd

nuclei, inelastic, effect of nucl. orientation and electron polarization, theory 4=15200
nuclei, inelastic, electric multipole excitation 4=19757
by nuclei, inelastic form factors 2=5894
on nuclei, inelastic, nucleon-nucleon correlations 2=3555
by nuclei, inelastic, partial-wave analysis, quadrupole excitations 3=665
nuclei, inelastic, pion production calc. 4=12208
nuclei, light, magnetic elastic scatt. 3=4626
nuclei, light and medium, electron-proton pairs 2=10089
nuclei, light, strong M1 transitions 3=12578
nuclei, liquid drop model, partial wave analysis 3=8081
nuclei, mag. form factors eval. 2=22798
on nuclei, non-coherent 2=3556
on nuclei, non-coherent 3=2438
nuclei, rel. to nuclear pair correl. function and momentum distrib. 3=7964
nuclei, radiative tail, nuclear size and mag. effects 4=19758
nuclei, relativistic, by Contour integr. 3=12656
by nuclei, relativistic electrons 3=12657
by nuclei, second Born approx. 3=8082
nuclei, test of quantum electrodynamics 4=22120
nuclei, vibr. levels excitation, theory 3=7985
nuclei, $Z \leqslant 20$, elastic and inelastic, generalized model 4=9482
nucleon structure determination 0=5552
on nucleons and deuterons, high-energy, theory, rel. to π-nucleon interaction 0=11202
e—N, differential cross-sect. using dispersion relations for form factors 4=21845
(e, N) and ($\bar{e}$, N) transitions, symmetry behaviour 2=7830
e—N, form factor sum rules 4=3395
on nucleons, form factors prop. to helicity amplitudes 2=18107
electron—nucleon at high energies 1=10878
nucleons, high-energy, use of Regge poles theory 3=5987
nucleons, rel. to neutron—proton mass difference 4=9187
nucleons, rel. to nucleon form factors 2=13782
on nucleons, π prod., theory 3=595
by nucleons, scatt. amplitudes 3=10145
nucleons, strange-particle prod., dispersion theory 4=9285
nucleus of α-particle core and weakly-bound neutron 4=6326
by nucleus, cross-section rel. to positrons 2=20601
nucleus, inelastic, high-energy, radiative corrections 4=15201
electron—nucleus, inelastic, rel. to two-nucleon correlation function 1=19444
nucleus, struct. obs., review 4=25273
one-pion exchange analysis, validity 3=4418
on penetration of rectangular potential barrier 0=15334
phase shifts calc. for Thomas—Fermi potl. 3=22498
electron—phonon, in semiconductors, uncertainty principle 4=15444
photon beam, intense, rel. to harmonics of beam 4=9169
electron—photon showers, direct production from μ-meson interactions 3=14998
by photons, polarized, intense, from laser, obs. possibility 3=12448
on π-mesons, e.m. structure of π-mesons 1=2077
π-meson, high-energy, use of Regge poles theory 3=5987
π^- scatt. at 1.12 BeV/c, cross-sections 0=5586
π—e, radiative corrections, q.e.d. parts 4=27882
π—e, 16 GeV/c meas. rel. to four-momentum transfer 4=21903
π electroproduction on nucleons, theory 2=3377
in plasma, excitation of plasma oscillations 0=10922
in plasma, in longit. oscill. 1=16353
at plasma surface 1=18852
in plasmas, Langmuir scattering 3=24268
polarization, by Mott scattering 0=17306

  zero strangeness theory, isofields eval. 3=2186
interactions
  See Field theory, quantum, interactions; Nuclear interactions. Entries on interactions involving named particles are listed under the particles concerned, e.g. Mesons, interactions; Cosmic rays, effects and interactions.
Elements
  age and formation time 2=938

Elements—contd
- age, from Xe isotopic composition of meteorite Richardton 0=4041
- artificial, discovery, history 4=11001
- atomic radii, electron shells 0=11477-9
- b.c.c., lattice specific heats, from lattice vibration spectrum 2=8166
- critical energies 4=6012
- element 102, production 0=7498
- 54-78, 86-107, in modified periodic system 2=18392
- Gps IV and VI, electron binding energies 0=7689
- Gp. VIII metals, and cpds., stereochemistry 1=15017
- K-edge absorption, from V to Ge 4=4243
- lawrencium, discovery 1=13700
- non-transition, multivalent, lattice vacancies resistivity 3=4903
- nucleosynthesis, duration 0=5684
- 102 synthesis 4=19740
- radiation units 4=6012
- spectra, visible, principle times of 82 elements, tables 2=3690
- spectral-line intensities, 39000, of 70 elements, table by wavelengths 2=3691
- superconducting, with extremely low transition temp. 0=5236
- tables of props. 3=2146
- transuranic, build-up in reactor due to U recycling 0=13364
- transuranic, production and stability 2=8012
- transuranic, review 3=4284
- transuranic, review, prod. and predicted props. 1=8628
- transuranic, survey of research 2=19085
- transuranium elements, recent research 4=12335
- transuranium, 99-102, prod., identification 2=7778
- Z = 37 to 98, Hartree scatt. factors 4=26628
- **origin**
  - See also Cosmology; Thermonuclear reactions.
  - age of nuclei and nuclear synthesis continuation 4=4744
  - "bypassed nuclides", formation mechanism 2=1972
  - far transuranium, spontaneous fission processes 4=22239
  - and Galaxy age 4=29411
  - Galaxy, time of nucleosynthesis, meas. 4=17983
  - Heavier than Ca, synthesis mechanism 3=15185
  - heavy elements, creation by neutron capture on a fast time scale, theory 0=20485
  - light, by spallation, in Hoyle's theory of solar system formation 4=7967
  - minimum age in Galaxy 4=13899
  - nuclear fission in early history of the earth 0=14323
  - production methods, correl. with abundance data 2=6982
  - proton-rich, in stars, reaction following neutron capture 2=6983
  - near Pt, fusion processes in supernovae 3=6318
  - rare light elements 2=4718
  - relative contribs. of supernovae and giant stars 2=24082
  - review 1=4211
  - solar system, formation in early history 2=11107
  - stone meteorites, radiogenic, spallogenic and primordial inert gases 4=23898
  - supernova theory of origin of cosmic ray nucleons 1=3328
  - Ag^{107}, in iron meteorites, formation from extinct Pd^{107} 1=2608
  - CNO cycle, reaction trmp. for terrestrial material 2=3575
  - from H, evolution 1=15412
  - He, in Milky Way 0=2075
  - Ne^{20} 2=997
  - and Sm neutron capture, 30 keV 3=10354
- **relative abundances**
  - age of nuclei estimation and nuclear synthesis 4=4744
  - chondritic meteorites, rare earth abundances 0=14402
  - cosmic ray abundances, emulsion stack measurements 1=3316
  - cosmic ray charge spectrum of heavy primaries 1=3323
  - cosmic ray Li, Be and B ratios to heavier nuclei 1=3321
  - cosmic rays, very heavy nuclei 1=3319
  - earth's crust, chondrite model 4=23696
  - Galaxy, emitting K-series X-rays 4=10851
  - Galaxy, rel. to time of nucleosynthesis 4=17983
  - heavy nuclides, table 2=2548
  - initial 3=16324
  - iron group, formation process in supernovae 1=15516
  - in lunar crust 3=3546

Elements—contd
- **relative abundances**—contd
  - metal deficiency in population II stars 4=20895, 26904
  - metals, in stars, deficiency in population II 3=13908
  - meteorites, Fe, isotopes of He and Ne 4=20912
  - neutrino's two types 4=13869
  - neutron numbers 98, 108, 116, importance 3=12751
  - in planet Venus 2=19284
  - revised table 0=8469
  - solar atmosphere, determination 0=18744
  - solar atmosphere, lecture 2=24111
  - in solar corona 4=29456
  - stable isotopes, origin correl. with recent data 2=6982
  - stars 2=21724
  - in stars, effect of neutrino emission 2=17293
  - stars, He burning, large mass 4=29375
  - stars, influence of beta-decay conditions 2=13146
  - stars, line profile determinations 0=18859
  - stars, rel. to mag. activity in evolution 2=11139
  - stars, magnetic, surface 3=11564
  - in stars, synthesis by neutron capture 3=21113
  - upper atmosphere, Li, K, Na 2=24028
  - B and B^{11}/B^{10} ratio, in meteorites and in earth 3=13876
  - Be in solar atmosphere 3=13881
  - C, in stellar atmospheres, effect on ionization 1=18114
  - C, N and O in cosmic rays 0=15469
  - Cm, possible natural existence 3=19825
  - D/H, galactic 2=21740
  - Fe and Ni in solar corona 4=29458
  - Fe and Si in sun 4=29441
  - in H II region, i.r. emission data 4=13908
  - H/He, in nebulae, sun and interstellar matter 1=15518
  - Li, rel. to origin of solar system 0=16537
  - Li, in T Tauri stars 1=5160
  - Na to K ratio, in upper atmosphere 0=14194
  - Na/Mg in Am, Ap stars 4=29381
  - Na, in upper atmosphere 1=21024
  - Pb, abundance in sun 1=5970
  - Pt and Ir in meteorites 2=24107
  - S^{35}/S using a liquid scintillation counter 1=20778
  - Ti, stellar and solar photospheres 0=14414
  - U, dating of Galaxy 2=15389
  - U and Th from primordial Pb^{206}/Pb^{207} ratio 3=25971
  - U^{234}/U^{238} disequilibrium, and pleistocene dating 3=13647
  - Xe, isotopic composition in chondrite Richardton 0=14405
  - Xe in meteorites 0=18720

Emissivity
- absorbing materials, selective, meas. using i.r. spectrometer 3=9598
- aluminium, 200-540°C 1=4498
- from brightness temp. and radiated power, comments on method 4=24426
- cathodes, SrO, on O—Ni base, var. with thickness 3=20440
- cavity, open, from reflection meas. 2=5138
- cavity-type radiant energy sources 1=8254
- collection of data, over temp. range 100-5000°F 2=9444
- effect of adsorption of gas 2=21573
- gases, application of kinetic theory 0=3559
- gases, diatomic, i.r. at high temps., calc. 2=10256
- gases, high temp. 0=3621
- gases, pressure-modulated i.r. emission 2=11430
- globar (i.r. source) λ=0.65-17.9 μ range 2=7450
- globar radiation source 1=11851
- graphite, rel. to crystallite orientation, at high temps. 2=10327
- heat transfer in simultaneous conduction and radiation 2=19742
- i.r., SiC-silicide mixtures 2=7453
- i.r. windows meas. 2=22084
- Inconel, oxidized, 1.5-15μ 0=16917
- Inconel, total hemispherical emittance 3=289
- isothermal cavities 3=24101
- measurement, electrical conductors, by filament flash heating 4=5433
- measurement, in i.r., apparatus and methods 0=16917
- measurement slightly heated objects, by pyrometer theory 4=11394
- measurement, small diameter Pt-10%Rh wires, 600-1450°C 2=1306
- metal wires, thin, rel. to plasma props. 3=13159
- metals and alloys, high temp. meas. 4=14444

Emissivity—contd
- metals filaments, meas. by controlled flash heating 3=7379
- metals, hemispherical, meas. using strip sample 3=3919
- metals at high temp., meas. method 0=6903
- metals, highly polished and alloys, 100-900°C, direct meas. apparatus 0=8834
- metals, rel. to heat conduction 4=5436
- metals, i.r., spectral, mea. method 3=292
- metals, thermal, rel. to optical constants of surface 3=286
- metals, total hemispherical, meas. apparatus 2=11532
- Planck's calc., including absorpt. 3=9653
- polytetrafluoroethylene, infrared 1=8999
- radiation by diffuse conical cavities 3=14410
- semi-infinite medium, non-stationary luminosity 4=17968
- spectra emittance of refractory materials 4=14443
- spectral radiance of various terrains, 1-20 μ 2=4590
- spectral, relation to other optical props. 3=25432
- stainless steel types 321 and 430 3=289
- surface, blackbody 0=8829
- surface of evaporating water 2=22095
- thermal, ratio to absorptivity of sunlight 0=19354
- translucent solids, low temp. directional 0=14874
- Venus, i. r. intensity, rel. to surface nature 2=4745
- Ag wire, meas. down to 2000 Å diam. 3=13159
- Au, spectral, 4-13μ, 550°-1000°K 3=292
- Au, temp.-independent, study and interpretation 0=14875
- B_4C powder 0=16919
- BN powder 0=16919
- C particles, dispersed 0=2268
- CO_2 bands, at 1000°—4000°K 4=12476
- CO_2, i.r. spectral, 2.7 μ band 4=20064
- CO_2, i. r. spectral, in 2.7 μ region 2=8094
- CO_2 at 1200°K, statistical model 3=5467
- CO_2, 2.7μ, 1200°-1800°K 4=17290
- CO_2, 4.3μ, 1500-3000°K 4=14217
- CO_2, spectral emissivity in 4.3 μ region 1=4379
- CaO and MgO, thermal, rel. to catalysis 2=7452
- CdB_6 powder 0=16919
- Cr_7C_3 powder 0=16919
- H plasma, equilibrium, calc. for up to 10^4 °K 2=9568
- HCl, i.r., at elevated temp. 1=12926
- HCl, spectral, 1000-3400 cm^{-1} 1=851
- H_2O, polarized, i. r., calc. 4=24217
- H_2O vapour, i.r. 1=15960
- H_2O—CO_2 hot mixtures 1=11097
- HfB_2 powder 0=16919
- LaB_6 powder 0=16919
- Mo, 0.65 μ, three types of surface 4=16285
- Mo, spectral and thermal above 2300°K 0=14876
- NO, i. r. spectral and total, at high temps. 2=10256
- Nb, blackness, 1200-2500°K 4=30687
- NdB_6 powder 0=16919
- Nb, 500°-1100°C meas. 2=11533
- Ni, effect of surface texture 4=2126
- Ni, 0.65 μ, three types of surface 4=16285
- Ni, thermal emissive power 3=286
- Ni—Cr alloys, effect of C absorption 3=3347
- Ni—Cr—Fe alloys, effect of C absorption 3=3347
- Pd, from 1100°K to melting point 4=28702
- Pt, 1.5-15μ 0=16917
- Pt and Pt—Rh wires, 100°-1000°C 3=24100
- Pt, temp.-independent study and interpretation 0=14875
- Re, from 1100°K to melting point 4=28702
- Re, total emittance, up to 2000°K 4=2883
- Rh, from 1100°K to melting point 4=28702
- Si, spectral, rel. to lattice absorption bands 2=10582
- SiO_2, quartz, infrared 1=8998
- SnB_6 powder 0=16919
- Ta, 0.65 μ, three types of surface 4=16285
- Ta, spectral and thermal above 2300°K 0=14876
- TaC, rel. to temp. 2=2448
- Th, carbide—iodide, at high temps. 3=23378
- Ti, from 1100°K to melting point 4=28702
- TiC powder 0=16919
- U surfaces, polished and oxidized 3=14413
- UC, temp. depend. meas. 4=23225
- W ribbon, var. with crystal structure 4=11324
- W, spectral and total above 2300°K 0=14876
- YB_6 powder 0=16919
- ZrB_2 powder 0=16919
- ZrC, spectral, and phase transform., ~2200°C, fruitless search 4=17774

Emulsions

tables, for ideal gases and isotope exchange 1=9418
transformations, in optical image formation 1=12965
transonic flow, adiabatic, energy dissipation. 3=163
turbulent-thermal entropy 1=18680
and uncertainty principle 3=14036
vacancy formation, motion in NaCl and KCl 2=3900
vaporization and condensation, theory 3=19070
of vaporization, correl. with temp. for gases and liquids 0=1065
vaporization of K vapour 2=1312
waves (weak), interaction with a flame front 1=18664
Zemplen's theorem, appl. to magnetohydrodynamics 2=22314

properties of substances
air-C mixtures, 8000° to 30000°C, 1-150 atm 2=5069
alkali halides, change on fusion 0=2774
alkali halides, Debye temps., temp. depend. 3=22667
alkali halides, entropy of fusion 2=19776
argon and xenon 1=6896
azurite, $Cu_3(Co_3)_2(OH)_2$, change at Néel temp. 0=1559
benzene, adsorption, from electronic
benzene, Debye approx. 3=15440
borates, glasses and compounds, of fusion 4=22516
β-brass, long-range order 0=12072
Δ^α-pentenoic acid, isomerization 0=14098
ferric methylammonium alum at low temp. 1=14672
fluorite, entropy of fusion 1=9507
glass, excess at transformation, liquid to solid 4=27375
Gp V sulphides, 298.1°K 0=13491
helium II, under pressure from fountain effect meas. 1=8278
hexamethylenetetramine, Debye approx. 3=15440
ice, residual 4=17330
manganites, structure transformation with temp. 2=14923
metal dihalides, gaseous 4=21184
methyl borate, evaluation from spectroscopic data 2=8100
methylphosphonyl dikalides, from heat capacity meas. 4=30521
naphthalene, Debye approx. 3=15440
noble metals, 3-fold vacancy complexes 0=17961
polyethylene oxide, entropy of melting 2=15821
polymer films, gas diffusion, linear free-energy relationship 3=2821
polypropylene, atactic and isotactic, rel. to structure 3=10597
polyvinyl sulphonate, alkali halides, parameter agreement 2=11367
propionitrile 2=5222
propylene oxide 4=22496
rare earth monoxides, electronic contributions 2=1317
steam, equations of state 2=13366
sulphuryl fluoride 0=5016
tetramethylammonium hydrogen dichloride at 298.15°K 2=14303
trifluoromethanethiol 0=5017
trifluorophosphine 2=13484
Al—Pu alloy, δ-phase stabilized, at < 300°K 1=17412
Ag_2O, 2° - 80°K, rel. to particle size 3=769
Ar adsorption on graphitized carbon black 3=11324
Ar, plasma, entropy-enthalpy diagram to 10^5°K 2=9564
Ar, solution in H_2O 4=159
Au, 12-273°K 4=17364
BOCl, rel. to vapour-phase equilib. 4=15837
$(BOCl)_3$ 3=23538
BaF_2, fusion 2=9463
Be hydroxide, exptl. determ. 4=2146
$(BoF)_3$, fusion 2=4536
CH_4, solid, zero point entropy 2=14379
CH_2Cl_2, $CHDCl_2$ and CD_2Cl_2 4=22396
CO occluded in β-quinol clathrate 4=15376
CO, solid, e. s. energy calc. from quad.-quad. interaction 4=30494

Entropy—contd
  properties of substances—contd
    CO_2, calc., 0°-1000°C, up to 100 bar pressure 4=5231
    CO_2, P/T/Entropy diagrams 1=6989
    $CdCl_2$, 515-565°C 4=16144
    $CoBr_2.6H_2O$, change at Néel temp. 0=3099
    $CoCl_2$, 11-300°K 2=6272
    $CoSO_4.7H_2O$, changes in high mag. fields at low temp. 2=23069

  water, effect of monomolecular films 2=22096
  water, enhancement by foreign mols. adsorbed on surface, expt. 4=8517
  water, Ocean—atmosphere, in Antartic 3=9027
  water, reduction by cetyl alcohol 0=14890
  water, surface temp. meas. 2=22095
  water surfaces coated with stearyl alcohol films 0=16922
  whisker growth, theory 4=29063
  in Wilson cloud chamber, supercompression ratio 2=1634
  Ag, evap. and thermal etching 1=4013
  Al, source for vacuum deposition 0=19240
  Al, from W heaters, W content meas. 3=1364
  Al from W wire 2=22093
  Al—Fe films, Al source position and mag. anisotropy 3=18084
  Al_2O_3, melting point discontinuity 4=18497
  Al_2O_3, rate 0=1057
  Ba from Rh single crystal 4=30892
  Ba from sintered Ni cathode 0=7132
  Ba—Ni cathodes, during operation 2=3068
  Be, in high vacuum 0=3677
  Br from graphite bromide, in vacuo, electron microscope obs. 3=20175
  C film, 500 A, technique 2=10940
  C by flash illumination 0=1962
  C and Pt for electron microscope shadow-casting technique 0=8293
  CO on W 0=3325
  Cd, rate rel. to spectral line intensity 2=22037
  Cd, from W 1=20693
  CdS single cryst., mechanism 4=27388-9
  Cr, Cr + Ni, in vacuo, from electron diffr. exam. of films. 3=16143
  Cr, in vacuum, under electron bombardment 2=11542
  Cu wires, explosions 0=5214
  Fe thin films, rel. to magnetic anisotropy and domain structure 3=1070
  Fe—Al films, Al source position and mag. anisotropy 3=18084
  Ge films, vacuum-evap. prep. 4=2123
  Ge, r.f. levitation vacuum technique 2=23914
  H_2O droplets, freely suspended and charged, in humid air 4=2891
  H_2O, isotope enrichment, variation with sample origin 0=17681
  H_2O, through mixed monolayers of long-chain n-paraffinic alcohols 4=8518

Evaporation—contd
He I, due to current-carrying leads 2=9471
He II, liq., vapour velocity near surface 3=1883
Hg, rate rel. to spectral line intensity 2=22037
Hg whiskers, kinetics 4=4559
I, molecular vibrational distribution 2=12318
InAs, mass spectroscopic study 0=19510
InSb films, techniques 4=20808
InSb, Sb film formation 0=735
K crystals, rel. to vapour pressure 0=13961
K, molten, under vacuum, isotope separation 0=7709
K whiskers, kinetics 4=4559
KI, crystal, coefficients rel. to partial pressure 2=7477
Mg, effect of sorbed gases 4=14466
Mo oxides, mass spectra 0=10699
N_2, heat transfer from Cu and Pt wires 0=1050
NaCl crystal plates, evaporation figures 0=7891
NaCl, solid, coefficients rel. to partial pressure 2=7477
Ni, coefficient, 1190°–1355°C meas. 2=19784
Ni, film decoration of cleaved NaCl 3=20931
Ni + Cr, Cr, in vacuo, from electron diffr. exam. of films. 3=16143
Ni—Fe layers, composition 3=18377
Pb, rate rel. to spectral line intensity 2=22037
Pt in air, 19.81°C, accommodation coeff. rel. to pressure 4=27218
S, solid, coeffs. rel. to partial pressure 2=7477
Sb, from heated InSb, hollock formation 0=2830
Sb_2S_3, crystal, coefficients rel. to partial pressure 2=7477
Si, by electron beam heating 0=8284
Si films prepn. 3=8926
Si, r.f. levitation vacuum technique 2=23914
Si, in vacuo and film fabrication 3=20927
SiO films, stress anisotropy rel. to prep. 3=11144
SiO on GaAs diodes, electroluminescent radiation change 4=7205
SiO_2, nuclear target prep. 1=7400
Th metal 1=1851
Th monolayer films on W 2=15088
Th, from thoriated tungsten cathodes 0=7135
Ti, in getter-ion pumps 4=18270
Ti, by heat cond. and rad., in getter-ion pump 2=15656
Ti, ionic pump 2=7264
U oxides, mass spectra 0=10699
W filament, heated, rel. to heat dissipation rate in gas 4=372
W oxides, mass spectra 0=10699
Zn, effect of sorbed gases 4=14466
Zn, thermally evaporated cleavage surfaces 4=29179
Zr diboride 2=2936

Examination of materials
See Electron diffraction examination of materials; Electron microscope examination of materials; Neutron diffraction examination of materials; X-ray examination of materials.

Exchanges, chemical
See also Isotope exchanges.
acetylacetone, keto—enol system, proton exchange, study using nucl. mag. multiple resonance 4=13702
alanine, irrad. single crystals, free radical p—d exchange reaction, e.s.r. study 4=23043
ammonium molybdophosphate ion exchanger for fission waste separation 0=4719
in aqueous media, proton mobility and electron exchange 4=15833
atomic reactions, energy distribution 0=3294
bimolecular reactions, Monte Carlo calculations 3=25811
cation-exchange foils, use as α-ray sources 2=19148
cation exchanger, for Li^6/Li^7 separation 2=22924
cationic, organic solvents, use of 3=18453
chlorophyl pigments and deuterium cpds, H–D 4=26751
electrolytically generated benzonitrile neg. ion 2=19136
electron exchange between Tl(I) and Tl(III) 1=1476
entropy of mixing interconvertible species, Gibbs paradox 1=10290
ethanol, proton-transfer ion—molecule reactions 4=23623
fission products retention by humus, cation exchange 2=6074
gas phase, reaction rate, quantum statistical mechanics 0=14097
general potential-energy function 2=17078

Exchanges, chemical—contd
halide nuclei, with Hg(II) in aq. soln. 4=2142
halogens from gas with NaCl crystals, using $NaCl^{36}$ 1=4076
ion exchange kinetics, revised tables 3=13588
ion-exchange methods for extraction of fallout fission products 1=13677
ion exchange (Nov. 1959-Nov. 1961) 2=17079
ion exchange, packing density of beads 2=1130
ion-exchange thermodynamics 1=11609
ion—molecule change transfer reactions 0=4734
ion-molecule reactions, mass spectrometer study 1=1478
ionic reactions, effect of inert salts on equilibrium 2=19135
methanol, charge exchange with slow positive ions 2=6870
methanol, proton-transfer ion—molecule reactions 4=23623
methanol and solvated cations and solvent 3=8944
in nuclear magnetic resonance 2=20866
oxygen, rare earths and their monoxides 2=1317
polar liquids, ionic purification 1=20723
potassium fluorosilicate in solution in KBr equilibrium reactions 1=20722
proton exchange phenomena, organic cpds., n.m.r. study 2=1168
proton-transfer studies by n.m.r. 0=14117-18
quantum-mechanical calc. of probability 0=3303
rate const., hydrogen atoms and mols. 2=19133
rates in systems with several nonequivalent sites, by nucl. mag. multiple resonance 4=13702
residual gases with surfaces in high-vacuum apparatus 1=18490
trimethylammonium ion in aq. soln., proton-transfer study by n.m.r. 3=25812
vibrational excitation 0=3295
AsH_3, hydrogen exchange with H_2O, equilib. const. 0=1952
$BF_3(g)$ with $BCl_3(g)$ 2=15127
$B_{10}H_{10}^{2-}$ and $B_{12}H_{12}^{2-}$, sequential substitution 2=19134
$B(OH)_3(g)$ with $B_2O_3(l)$ 2=15127
Ba chromate precipitation, crystal habit variations 1=14978
$CH_3NH_3^+ + OH_2 + NH_2CH_3$ reaction in aq. acid, proton transfer study by n.m.r. 0=14118
Cd–Cd^*SO_4 solution, isotopic exchange with Cd^{115} tracer 2=21589
Cl + HCl and Cl + DCl reaction rates, D-isotope effect, and tunnel effect models 4=29206
Co^{2+} in methanol, rate of methanol exchange of solvation sphere 4=18219
H bimolecular exchange, quantum mechanics 2=8905
H + H_2 reaction, collision dynamics 4=17857
H, ortho-para conversions 0=3293
H_3^+ and saturated hydrocarbons, proton-transfer reactions 4=23622
H_4 and H_5 formation, by adsorbed molecule exchange 4=9740
HCl^*-CCl_4 0=8300
He^{2+}–H charge transfer, quantum theory 2=6107
I, thermodynamics of addition to ethylene, propylene and cyclopropane 2=17080
NH_3, between aq. NH_4OH and metal-ammine complexes 2=4525
NH_4^+ reaction in aq. acid, proton-transfer study by n.m.r. 0=14117
NO with N_2O_3, N^{15} enrichment 0=11497
Ni^{2+} in methanol, rate of methanol exchange of solvation sphere 4=18219
O^{18} with NiO 2=2100
O^{18} with O_2, NO, NO_2, mass spectrometry obs. 4=23645
$PbBr_2$, activity coeffs., in reciprocal molten salt systems $PbBr_2$ + NaCl and $PbCl_2$ + NaBr 3=16155
Zn vapour with polycrystalline ZnO, 720° to 840°C 1=14320
Zn in ZnO (polycrystalline), from Zn^{65} vapour 1=9166
Zr^{97}, ions, hot, from U fission, exchange with $ZrCl_4$ 3=21006

Excitation
See Atoms, excitation; Molecules, excitation; Nuclear excitation; Vibrations, excitation.

Explosions
See also Detonation; Shock waves.
air-cavity explosive charge for 0.097-0.67g projectiles 3=23824

Explosions—contd
in air and water, small, e.l.f. (< 1 c/s) radn. 3=4265
"Argus experiment" nuclear explosions, effects 1=1582
Argus nuclear explosion, during mag. storm, loss of trapped electrons in ionosphere 0=8371
atmospheric, pressure pulses 2=11017
atmospheric waves, sub-acoustic, comparison 2=8980
blast scaling 1=1765
blast-wave density gauge 4=2777
bomb blast at surface, response of semi-infinite elastic solid 0=19279
bridgewires used in electroexplosive devices, thermal response 1=13061
brittle medium, shock wave-front 3=23970

nuclear, high-altitude, mag. pulses, 0.01-25 c/s 4=2326
nuclear, high-altitude, rel. to magnetotelluric and v.l.f. signatures 4=13802
nuclear, high altitude, Russian, and ionosphere absorpt. 4=13836
nuclear, high altitude, and twilight, Li^7, high abundance 3=18554-5
nuclear, ionosphere, ionization distrib. 3=16243
nuclear, in ionosphere, review of 1960-62 U. S. work 4=30953
nuclear, and ionosphere, spread F development 3=9085
nuclear, and ionospheric foF_2 disturbances 3=13738
nuclear, Johnston Island, ionosphere disturbance 0=4798
nuclear, July 1962, earth mag. field perturbations 3=3517

Explosions—contd
nuclear (9 July 1962), geomag. field variations in France 2=24063
nuclear, July 9, 1962, geomagnetic, ionospheric effects 4=30957
nuclear, 9 July 1962, radiation from trapped electrons 4=7911
nuclear, magnetic effects 0=4770-1
nuclear, magnetic flash, e.m. signal 0=9203
nuclear, meteorological effects 0=4820
nuclear, 30 Oct. 1961, rel. to global atmos. pres. effects 3=9036
nuclear, in outer space, e.m. wave prod. 0=15136
nuclear, "outside" atmosphere, subacoustic wave production 3=9060
nuclear, production of long-period seismic waves 0=14158
nuclear, round-the-world sound waves, effect on ionosphere 2=6927
nuclear, Russian 1961, early fallout characteristics 3=8024
nuclear, scientific applications 1=12030
nuclear, in space, effects 3=6968
nuclear, in space, as test of e.m. wave dispersion 1=16574
nuclear, near surface, long-period seismic waves 3=13642
nuclear, "Teak", photographic anal. 0=14198
nuclear, terrestrial magnetism distrubances 0=12141
nuclear test, generation of elec. current 2=5991
nuclear, underground, e.m. signals 3=11380
nuclear upper atmosphere and artificial electron injection, as research aid 3=16238
PETN low-density pressings, initiation by plane shock wave 1=11621
plasma, cylindrical shock waves 4=27524
point explosion in gases, calc. 4=14266
point-explosions, in compressible medium, self-similar solutions 1=1474
point, in ideal gravitating continuous medium 2=939
pressure pickup, resiliently mounted, for recording disturbances 1=12841
pressure pulse of large explosion in atmosphere 1=20827
primary waves, elastic displacement 4=21219
product state calc. by shock wave parameter method 2=19145
products, sound velocity meas. 0=14728
in quarries, seismic waves, in S.E. Australia 0=4768
RDX, electrically initiated, growth of explosion 1=11620
Rayleigh-type waves, development in vicinity 0=10382
Rayleigh waves generated, signal-to-noise ratio 2=19186
rocket-grenade expt. for upper atmos. temp. meas. 0=14197
rocket, study of upper atmosphere 1=20879
shock initiation, in liquids 1=7910
shock initiation, in solids 1=7911
shock wave in non-uniform gas due to short plane explosion at low density 4=11294
shock waves, finite difference net 4=16169
shocked pressing of granular NaCl, light emission 2=17501
slow surface decomposition of explosive crystal 2=19144
solid cast explosives, stable and transient shocks 0=3584
solid explosives, detonation characteristics 1=15192
solid surface in contact with liq., cavitation destruction mechanism 4=7467
solids, mechanical response to extreme e.m. radiation 2=11398
solids, microwave interferom. obs. 0=8307
sound, elastic plate in liq. half-space response 4=21215
spherical, in seawater, implosive phase 2=9306
star interior, energy transfer by shock waves 4=13895
study using multibeam cathode-ray tube 1=324
TNT, density, pressure and sound velocity in products 0=14728
Tamanrasset records of "Experiment Argus" effects due to nuclear explosions 1=1583
thermal initiation, conduction equations 0=5200
thermal stability, explosion time 1=4096
thermal, steady theory, solutions stability 4=8316
thermonuclear, 9 July 1962, rel. to terrestrial—ionospheric cavity resonance 3=3485
transition from ignition, vessel size 4=26754
underground, detection, review 3=1418
underground nuclear explosions 0=10383-5
underwater, as acoustic sources 1=1790
underwater, energy per unit-area spectrum of shock wave 4=23720

Explosions—contd
underwater, H_2—O_2 mixtures, for acoustic studies 3=9552
underwater, sound backscatt. from deep-sea bed 3=3444
upper atmosphere, chemical releases, expansion to ambient pressure 3=21047
wire explosions 0=12530
wire, impulse in plasma 0=7114
wire, shock waves, streak interf. obs., two wavelength, temps., electron conc. 3=18900
wires, conductor config. rel. to vaporization 4=18352
wires containing deuterium 0=7496
wires, elec. conductivity during process 3=8488
wires, electrical, generation of high-power r.f. pulses 1=13171
wires, as fast dynamic pinch 2=7588
wires, heating by condenser discharge, calc. 4=16265
wires, high-energy densities 0=10883
wires, for high power pulse steepening 0=2310
wires, hollow, X-ray emissions meas. 4=16177
wires, interaction with microwaves 3=4103
wires, plasma jacket, creation process 3=4102
wires, shock-wave prod., review. 3=199
wires, shunting mechanisms, at reduced pressures 4=18350
wires, simultaneously at 2 ends of bar 3=22778
wires under water, plasma temp., and ionization potential 4=21520
wires, X-ray analysis of aerosols produced 4=10659
Al wire, X-ray emission meas. 4=16177
Al and Cu metal foils, cylindrical, collapsing, z-pinch production 4=18351
Au wires, current density-independent resistivity 0=2850
C_2H_2 and O_2, shock waves, microwave obs. 4=27522
Cu foils, electrically exploded, striations 1=10692
Cu, shock wave profiles, mech. prop. meas. 4=28939
Cu wires by elec. impulses 0=5214
Cu wires, shock wave mechanisms in A 2=19596
Cu wires, shock-wave study 1=10693
H_2 + O_2, third-body efficiencies 0=21272
Hg fulminate, impact sensitivity 0=8305
LiD-containing wires, neutron pulses 2=7588
W, wire and strip, flash lamp induced heating, compared with electrical 3=21628
ZnO + Fe_2O_3, Zn ferrite prod. 4=4701
Extra-terrestrial radiation
See Cosmic radiations, radio-frequency; Sun, radiation.
Eye
See also Vision.
aberration on retina, rel. to response function 3=1564
accommodation microfluctuations by Foucault circle projection 1=21136
adaptational effects, rel. to contrast 2=15430
after-images of brief flashes, duration 2=7078
animal eyes, contrast transmission function, meas. 1=21152
aniseikonia, meas. and correction 4=2488
aperture rel. to vision and thermal hazards 3=16454
binocular vision with coloured filters before eye 2=7084
blurring of retinal image, contrast thresholds in fovea 0=6515
Broca-Sulzen effect, theory 2=7078
bullfrog, retina, spectral sensitivity 1=15383
burn damage, due to exoatmospheric nuclear event 4=20974
cat, accommodation meas. 4=15997
cat, central visual pathways, integrative processes 3=5307
colour interpretation, Land's experiments explained mathematically 0=3375-6
contact lenses, reduced pressure effect on fit 4=10980
cornea, six-cap structure 3=16455
differential chromatic thresholds, meas. apparatus 2=17328
dioptic components, contrast transfer function 2=7074
discrimination and contrast thresholds, rel. to media of eye 2=24220
electric field eval. from study of eye tissue 2=15428
electroretinogram, chromatic and short term dark adaptation 0=2060
electroretinogram during dark adaptation 3=7071
electroretinograms, green and blue, low luminances 0=8443
entoptic scatter sources in human eye 4=10977
extra-foveal vision, visual acuity and image clarity 1=21134

Eye—contd
foveal contrast thresholds for two point sources 2=21763
foveal sensitivity for protanope 4=20992
frequency response, Mach effect 3=9302
frog, electroretinogram, effect of prep. and electrode placement 0=14357
frog retina, binocular interaction 4=10986
frog's, standing potential 0=8456
geometrical aberrations meas., accommodation state 2=24224
human eye, flickering light, electrical responses 1=9236
human, photometry of lens 1=15379
human pupil system, nonlinearity in response to double-pulse stimulation 4=10973
human and rabbit fundi, photic exposure reactions 4=10978
human and steer, entoptic scatter, comparison 4=30998
image transfer function 4=20976
imaging props. of media, meas. 3=9303
increment threshold rel. to dark adaptation 3=5298
information capacity, in low-level illumination 0=6514
information efficiency 3=3922
insect, cross-correlation process in nervous centre 0=4828
insect, hexagonal diffraction patterns 4=20993
interaxial distance meas. 3=13963
intraretinal neurophysiology apparatus for mammalian eyes 4=10987
involuntary movement, demonstration method 1=21132
involuntary movements, effect on visual acuity 0=14343
involuntary movements, role in stereoscpoic acuity 1=9233
Land's experiments in two-colour simulation of eye, with full colour interpretation 0=3374
light adaptation and human electroretinogram 0=817
limits to human vision 1=21131
living, light distrib. in image 2=21764
melanin free-radical kinetics, and rel. to O_2 adsorption by semiconductors 4=20975
melanin granules, free radical generation by light 2=24222
metal, pupil with radial or circular gratings 3=11892
mobile, viewpoint recording 0=14342
movement meas. by contact lens techniques 4=29499
movement meas. photoelectric electromechanical system 0=3380
movement recording, contact lens fidelity 2=24221
movements in horizontal plane, latency and duration 2=7075
movements, nature rel. to evolution 2=15437

Eye—contd
movements, photoelectric technique for measurement 0=3379
movements, photoelectric technique for measurement of divergence 0=14347
movements, recording method 0=12226
movements during simulated radar search 0=14346
nervous excitation by visual pigment, mechanism 3=5288
neural inhibitory units 0=18566
optometer, high-resolution, for continuous accommodation meas. 4=15987
physiology, perception of light and colour 1=21145-51
pupillary diameter, age dependence 0=4830
receptor elements as semiconductors 2=1034
resolving power of retina with oblique incidence 0=18552
retina, amplifier effect mechanism 3=13965
retina, artificial, using fibres 3=11626
retina, cellular physiology 3=5289
retina coagulation, by laser beam 4=20966
retina, contribution to entoptic scatter 4=10976
retina, "on" centre and "off" centre receptive fields 3=5291
retina, sensitivity to photic flicker 3=13969
retina, transfer function by Ronchi test 3=11625
retina, vertebrate, electrical responses, mech. 3=5290
retinal area in one eye corresponding to blind spot in other, sensitivity 4=10974
retinal ganglion cells, nomenclature 1=10347
retinal image formation, optical and motor factors 3=5294
retinal image formation, optics, review 3=5293
retinal image, stabilization, apparatus 4=10979
retinal images and binocular space vision, relative sizes 1=21135
retinal images, light distrib. analysis 2=21765
retinal inhibitory interaction of neural elements 3=5295
retinal photoperceptors, struct. and mol. organiz. 3=5287
retinal receptor model, response as function of wavelength 0=6525
retinal receptors, optical properties 3=5292
rods, compartment theory for functioning 3=7070
saccadic movements rel. to vision 2=11224
sensitivity during contralateral stimulation 3=9304
spatial summation in visual pathways 3=13964
spectral sensitivity 0=18553
steer, entoptic scatter as funcn of wavelength 0=8454
tactile receptor vision theory 3=16461
temporal adaptation, to spatial detail 0=4829

rare earth ortho., ferromagnetic, weak, Curie temps. 4=13179
rare earth, ortho, single crystals, mag. anisotropy consts. 3=8683
rare earth orthoferrites, mag. props. at low temps. 0=10176
rare-earth orthoferrites, mag. susceptibility in strong mag. fields 4=28847
rare earth orthoferrites, weak ferromagnetism 0=18202
rare earth, three magnetic sublattices, normal energy state 3=6720
reactance amplification principle 0=3854
remanence aftereffect, meas. 1=6358
remanent magnetization rel. to hydrostatic pressure 2=14808
resistivity, microwave meas. 0=5243
resonance instability, microwave and l.f. oscilations 0=2448
resonance line width, g factor, meas. in diaphragm waveguide 1=20183
resonance modes, Walker type, in large samples 0=16142
reversible component of magnetization in memory-core 0=3086
review 2=14803
review, props., applications and technical advances 4=26331
rocks, Curie pt. determ. high-freq. method 4=28830
rod antenna, characts. 4=16662
rod waveguide microwave phase shifter 0=2447
rods, applied resonance field rel. to temp. 4=23037
rods, longit. magnetised, in waveguide, slow wave—electron stream interact. 4=27659
rotating half-wave plate, high-speed 0=9204
rot. mag. losses, very l.f. meas. 0=3080

Ferrites—contd
scattering of e.m. waves by coaxial cylinders 1=16566
single crystals, growth, Verneuil process, mag. props. 0=6327
sintered Ni ferrites of low porosities, res. line widths 0=10206
slabs, X-band high power effects 0=3861
solid state memory and switching devices, conference London, Sept. 1958 0=7188
space-average harmonic component due to spin waves 2=16924
specific heat, 1.8-5°K, mag. field at nucleus 2=6283
specific mag. props., in automation 2=10674
spectra, optical and infrared 1=6208
sphere, magnetostatic modes and polarization current corrections 2=10671
sphere manufacture 4=23982
spheres, single-crystal, nonlinear effects at principal resonance 4=4372
spheroids, coupled, instability modes in resonator action 3=15926
spin configurations coupling by anisotropy 3=3091
spin–wave generation in nonuniform mag. fields, theory 4=7231
spin-wave instability in hexagonal ferrites 3=11096
spin wave transitory growth on microwave pumping 4=13227
spinel cation distribution 0=7073
spinel, containing Co^{57} and Tb^{161}, hyperfine Zeeman splitting, 85° and 300°K 3=994
spinel, containing F, charge compensated, mag. props., crystal structure 4=13229
spinel, 3-component, short-range order 4=15727
spinel-like systems, indirect exchange interaction,
spinels, Barkhausen effect 4=1841
spinels, binding energy, statistical theory 0=2772
spinels, containing Mn^{3+}, cation valencies and distrib. 2=6792
spinels, cubic, spin configurations, theory 0=16145
spinels, degree of inversion 2=12918
spinels and garnets, nuclear polarization method 0=13825
spinels, ground spin state, classical theory 1=6349
spinels, subst. Mn–Sn, mag. props 0=3074
spinels, transit, metals, phase transformation model 0=2814
spontaneous coherent radiation, of ferrite in resonator 1=1238
spontaneous magnetization, temp. depend. quantum mechanical theory 0=6226
square-loop, in elec. circuits, 1 kc/s–5 Mc/s 2=10672
square-loop, magnetization-reversal process 3=13275
square-loop, magnetocrystalline anisotropy and coercivity 1=20127
square loop, relation between switching time and domain wall mobility 4=4371
square-loop, relaxation, temp. depend. 1=20128
square-loop, review 4=1840
square loop, switching properties 0=2421
square-loop, with temp. independent props. and improved disturb ratio 1=11450
square-loop type, partial switching 1=14733
structure, oxygen parameter in spinels 1=12640
structure relation with cementite 3=23447
substituted Ni ferrites, high power resonances 0=11925
susceptibility, spin-wave theory, mag. field non-resonant absorption 0=10170
susceptibility tensor meas. 3=20612
switching rate, effect of previous history 0=10173
switching of rectangular ferrites, rel. to grain size 4=28843
thermal cond., mag. field effects, 1.4-25°K 1=4972
thin films, preparation and mag. properties 1=6350-1
3-hole memory core, new oper. mode 0=2423
with three mag. sublattices, temp. dependence of mag. props. 3=23188
topotactically oriented 0=6336
toroids, high-speed rotational reversal 0=3084
travelling-wave frequency doubling in ferrites 1=5588
u.s. absorption 3=13278
unstable equilibrium, spin wave growth 0=11880
use of ferrite memory cores with multiwire spark chambers 4=16775
use in waveguides as non-reciprocal attenuators 0=13740
in waveguide, e.m. slow-wave structure for backward-wave applications 4=16658

Ferrites—contd
waveguide, isolators, mm wave, zero field, ferrimag. reson. 4=11804
waveguide loading, modes 0=2449
in waveguide, Y circulator 0=3832
wide-band absorbers, combined with conducting foils 2=22340
X- and V-band frequencies, prep., props. 2=14804
AgLa ferrite, mag. props., prep., crystal structure 4=1844
Ba ferrite, Bloch wall dynamics 4=30706
Ba, coercivity 3=15895
Ba ferrite, different dynamic magnetization mechanisms 4=28832
Ba ferrite, domain structure, effect of mag. field 4=26333
Ba ferrite, elec. cond. anisotropy, 20° to 180°C 4=10041
Ba, ferromag. domain pattern on cryst. faces 4=4375
Ba ferrite, high-coercivity state 3=11094
Ba ferrite, mag. domain structure and form of Bloch walls 4=10288
Ba, magnetization, temp. dependence 1=11449
Ba ferrite magnets, long-term stability 0=18199
Ba ferrite, powder, single-domain magnetic props. 3=15880
Ba ferrite powders, coercive force, effect of particle size 3=15879
Ba ferrite powders, sat. magnetization rel. to grinding and annealing 4=26334
$BaO.Fe_2O_3$, crystal structure and mag. props. 1=14735
$BaO.6Fe_2O_3$, domain patterns 1=6357
$BaFe_{12}O_{19}$, ferrimag. linewidth 1=14779
$BaFe_{12}O_{19}$, ferrimagnetic resonance in mm wave region 1=14780
$BaFe_{12}O_{19}$, magnetic anisotropy, effect of F-compensated Co^{2+} 3=15877
$BaFe_{12}O_{19}$, mag. domain structure 1=14714
$BaO.6Fe_2O_3$, magnetization, temperature dependence investigation 1=10169
$BaO.6Fe_2 O_3$, Mössbauer effect 4=12591
$BaFe_{12}O_{19}$, polycrystalline, ferromagnetic resonance 2=23696
$BaO. 6Fe_2O_3$, susceptibility, temp. depend. 0=18203
Ba–Bi ferrite magnet, sintering 1=20113
$BaCo_yFe_{17-9-y}O_{27}$, anneal-induced anisotropy 0=10120
$BaCo_yFe_{18-y}O_{27}$, hexagonal anisotropy 3=1029
$BaCo_xFe_{18-x}O_{27}$, $(0<x<1.5)$, single crystals, magnetocrystalline anisotropy 4=26336
$BaFe_{12-2x}^{3+}Ir_x^{4+}Zn_x^{2+}O_{19}$, linewidth, rel. to composition 3=15878
Ba–K Fe garnet, magnetic exchange anisotropy 4=13230
$BaM_x^{II}M_{12-x}^{III}O_{19-x}F_x$, ($M^{III} = Al^{3+}$, Ga^{3+}, Fe^{3+}; $M^{II} = Ni^{2+}$, Co^{2+}, Cu^{2+}, Zn^{2+}) substitutions and magnetization 3=1013
Ba and Pb, elec. cond., anisotropy and mech. 4=6953
Ba and Sr mixed, magnetic energy, magnetization and coercive force 3=13279
$Ba_{1-x}Sr_x0.6Fe_2O_3$, mag. props., texture effects 3=20615
$(Ba_{0.75}Sr_{0.25})O. 6Fe_2O_3$, comparison with $BaO. 6Fe_2O_3$ 4=28831
Ba–Sr–Pb, mag. props. 4=23016
BaZn, hexagonal, new series 6=13581
BaZnFe garnet, ferrimagnetic reson. linewidth reduction 4=13289
$BiFeO_3$, lattice constants and magnetic properties, rel. to temp. 3=20770
$BiFeO_3$, magnetic ordering, by neutron diffraction, 20 and 600°C 3=5018
Ca ferrite containing Gd^{3+}, ferromagnetic resonance and crystal structure 4=26359
$Ca_4Fe_{14}O_{25}$, preparation, mag. props. and structure 1=14743
$Ca_4Fe_2^{2+}Fe_{18}^{3+}O_{33}$, preparation, mag. props. and structure 1=14743
$Cd_xCu_{1-x}Fe_2O_4 (0 \leqslant x \leqslant 0.8)$. mag. moments and Curie points 0=11885
$CdO. MnO. Fe_2O_3$ computer components 0=3085
Co ferrite, anisotropy, mag. annealing effect meas. 2=10668
cobalt, anisotropy, one-atom model 0=13838
Co ferrite coating on elongated Fe–Co particles 4=17655
Co ferrite crystals growth, ferrous free 3=11230
Co ferrite, domain configurations 0=13795
Co, domain wall resonance, permeability dispersion 1=20092
Co ferrite, growth from system $Na_2O–CoO–Fe_2O_3$ 2=12744
Co ferrite, internal mag. field at Co nuclei 3=1154
Co, mag. anisotropy 4=1842

Ferrites—contd
Co ferrite, mag. anisotropy energy, theory 1=3913
Co, magnetization, temp. dependence 1=11449
Co ferrite, magneto-striction changes rel. to thermomagnetic treatment 3=13264
Co ferrite, single crystal growth 1=7846
$Co_xFe_{3-x}O_4$, mag. annealing, effect of cation vacancies 1=14703
$Co_{0.9}Fe_{2.1}O_4$, mag. anisotropy, mag. annealing effect, meas. 4=28837
$CoFe_2O_4$, films, Faraday rotation and mag. hysteresis 3=15655
$CoFe_2O_4$ films, optical Faraday effect 4=22879
$CoFe_2O_4$, heat changes rel. to magnetization 1=9035
$CoFe_2O_4$, magnetic domain structure 3=11098
$Co_{1+2x}Fe_{2-2x}O_4$, anisotropy composition var. and electron diffusion 4=23017
Co-substituted, ferromag. resonance linewidth 1=6398
Co-substituted, ferromag. resonance line-widths, calc. 1=7782
Co-substituted Mn ferrite, ferrimag. resonance 1=6403
CoFe ferrite, magnetoelastic effects, theory 1=9030
CoFe garnet, magnetostrictive displacement of O ions 4=13246
CoFe garnet, magnetostrictive displacement of O ions 4=13246
CoMgMn ferrite, ferrimag. resonance, orientation dependence of crit. microwave field strength 2=2294
Co—Mn ferrite, comparison anisotropy measurements 0=10119
CoMn ferrite, ferrimag. resonance anomalies 3=15924
CoMn ferrite, magnetostriction, theory 1=9031
Co—Mn mixed oxides, tetragonalization of spinel structure 0=8216
Co—Mn oxide spinels, tetragonal distortion 2=6760
$CoMnFe_2O_4$, prep. from oxalates 2=14798
CoZn, ferromag. domains, X-ray 0=1804
Co—Zn, influence of mag. field on thermal cond. 0=9866
CoZn ferrite, superparamagnetism and exchange anisotropy 2=14802
CoZn, thermal cond., mag. field effects, 1.4-25°K 1=4972
$Co_{2-x}\ Zn_x\ TiO_4$, ferrimag. props, 1·6° —400° K 3=1030
Cr-containing spinels, low moment origin 0=3079
Cr ferrite, alloyed with various metals, softening and atomic bond energies 3=20900
Cr ferrite, Grüneisen's const., X-ray meas. 4=1407
Cu, rectangular hysteresis loops, large Barkhausen jumps 0=1805
Cu ferrite, structure rel. to O content 2=826
copper ferrite transition temperature 0=1807
$CuFe_2O_4$, cubic—tetragonal phase transform. 3=11205
$CuO.\ Fe_2O_3$, magnetic props., temp. var. 4=28838
$Cu_{0.8}Cd_{0.2}Fe_3O_4$, magnetization increase 110-200 kOe 3=20617
Cu—Mg ferrite, mag. and cryst. props. 0=3081
CuMgAl ferrite tensor permeability, dielec. const. meas. 2=22155
Cu—Mn ferrites, square loop props. 0=11891
CuMn ferrite, structure rel. to O content 2=826
$CuMnFe_2O_4$, prep. from oxalates 2=14798
Cu—Ni—Zn ferrites, variation of props. with composition 1=6361
Cu—Zn, elec. cond., temp. depend. 0=564
Cu—Zn, magnetic permeability, time decrease 1=12540
Cu—Zn, magnetic susceptibility rel. to hydrostatic pressure 4=7288
$Cu_{0.05}Zn_{0.90}Fe_{2.05}O_4$, annealed and quenched, heat capacity, Néel temp. 0=4498
DyFe garnet, etching 3=18240
Dy Fe garnet, magnetostriction, temp. var. 4=13232
Dy Fe garnet, Mössbauer effect, liquid air temps. 4=12581
Dy Gd Fe garnet, magnetostriction, temp. var. 4=13232
Er ferrite garnet, absorption spectrum, near i.r. 3=20475
ErFe garnet, ferrimagnetic resonance 1=11468
Eu ferrite garnet, exchange interactions and magneto-optical effects 1=19957
Eu ferrite garnet, exchange interactions and magneto-optical effects 2=23535
EuFe garnet, hyperfine interact. of Eu^{151} 4=1343
EuFe garnet, mag. and elec. fields at Eu 3=12904

Ferrites—contd
EuFe garnet, mag. props., calc. 0=11894
EuFe garnet, magnetoelastic coupling constants 3=15886
EuFe garnet, magnetostriction, anomalous 4=1845
EuFe garnet, spectrum, $^7F_0 \rightarrow {}^7F_4$ line fine struct. 4=13054
Eu garnets, Faraday effect, freq. depend. 4=1745
Fe ferrites, growth of single crystals 1=7847
Fe garnets, lighter rare-earth ions, mag. props. 3=20620
Fe—Co ferrite, elongated, perm. magnet material 1=6354
Fe—Co ferrites, induced anisotropy, theory & exptl., and disaccommodation phenomena 3=1032
Fe—Co magnetic anisotropy by ferromagnetic resonance 1=11465
Fe—Co, magnetostriction consts., X-ray meas. 4=26337
Fe—Co ferrites, role of cation vacancy in mag. annealing 0=10174
FeCo, rotational hysteresis, domain dynamics 3=13269
Fe_5LiO_8, ordered, Fe^{57} n.m.r. 3=1204
Fe—Mn ferrite, electrical resistance and cation distribution 1=2484
FeMn ferrite, 1st anisotropy const., mag. structure, temp. depend. 3=13273
$Fe_xMn_{3-x}O_4$, conduction process, peculiarities near Curie pt. for x = 1.6-2.0 4=17491
Fe—Ni ferrite, ang. dependence of mag. field induced anisotropy 1=10170
Fe—Ni ferrites, ferromag. resonance, anisotropy and g-values 3=1171
FeNi ferrite, structure and mag. anisotropy 2=749
Fe_2O_3, dislocations, visualization by etching 2=18587, 23176
γ-Fe_2O_3, Fe^{57} Mössbauer effect, internal fields 1=9037
Fe_3O_4 (magnetite), Fe^{57} Mössbauer effect, internal fields and order—disorder transition 1=9037
Fe_3O_4(magnetite), magnetoresistance anisotropy 2=2123
Fe_3O_4—(Ni, Mg) ferrite, mag. cryst. anisotropy 2=18920
Fe—Y—La garnets 4=26679
GaFe garnet, magnetostriction 0=10164
Ga garnet, magnetization, in pulsed fields 4=4373
Gd, with compensation points, magnetic transformations, low-temp. 1=20122
Gd ferrite, with compensation points, magnetic transformations, low-temp. 2=23680
Gd, magnetic anomalies, in low-temp. region 1=20123
$3Gd_2O_3{\cdot}5Fe_2O_3$, compensation pt., effect on props. 3=6719
Gd garnet, magnetic anomalies, in low-temp. region 2=23682
Gd garnets, investigation near Curie pt. 1=10172
GdFe garnet, etching 3=18240
GdFe garnet, far i.r. absorption spectrum 3=15680
GdFe garnet, magnetic anisotropy 3=15787
GdFe garnet, temp. dependence of mag. props. 3=23188
$Gd_3Mn_2Ge_2GaO_{12}$ and related garnets, magnetic-ion interaction 0=3095
Gd oxides, garnets and perovskites, temp. depend. 0=11884
HoFe garnet, far i.r. absorption spectrum 3=15680
La, ortho, effect of substituting Al^{3+} for Fe^{3+}, from mag. meas. 3=8683
$La_2O_3.\ Fe_2O_3$, hysteresis, effect of temp. 0=13834
$La^{3+}Fe^{2+}\ Fe^{3+}_{11}O_{19}$, magnetic moment 1=11452
$LaFe_{1-A}X_AO_3$, mag. and struct. props. 4=30720
Li, with compensation points, magnetic transformations, low-temp. 1=20122
Li ferrite, with compensation points, magnetic transformations, low-temp. 2=23680
Li, elastic modulus and damping, anomalies 3=5061
Li ferrite, Fe^{57} n.m.r. and hyperfine field 2=18962
Li ferrite, ferrimag. resonance linewidth 2=14819
Li, disordered, ferrimag. reson. linewidth 3=5033
Li ferrite, ferromag. reson. line width 4=26360
Li ferrite, ferromag. resonance loss 2=12806
Li ferrite ($LiFe_5O_8$), h.f. magnetization processes 1=12538
Li ferrite, mag. field at nucleus, from Mössbauer effect 1=14745
Li, molec. field coefficients 0=1809
Li ferrite monocrystals, influence of ionic order on mag. props. 0=10124
Li ferrite, neutron irrad., effect on structure and mag. props. 4=13242
Li ferrite, ordered, ferrimag. resonance 2=12803
Li, polycryst., complex permeability, dispersion 1=20129
Li ferrite, square-loop props., effect of grain size 3=15876

Ferrites—contd
LiFe$_5$O$_8$, sublattice magnetization, by neutron diffraction 4=28840
Li ferrite—chromite, compensation pt., effect on props. 3=6719
Li ferrite–chromite, elec. and galvanomag. props. near compensation point 0=13830
Li–chrome, ferrimag. resonance 0=13862
Li ferrite–chromite, mag. hysteresis and elec. cond., 20° C to Curie pt. 4=4383
Li ferrite–chromites, magnetic transformations, low temp. 1=20130
Li ferrite–chromites, magnetic transformations, low-temp. 2=23681
Li chromite ferrite, magnetoelec. props., temp. depend. 2=623
Li—Cr, magnetostriction, near compensation point 1=3907
Li–Ni ferrite for memory core 4=24794
LiNiZn, square hysteresis loops 3=15866
LiTi ferrite, nonlinear effects at high powers, elec. cond. effect 3=15887
(LiFe)$_{1-0.5a-0.5x}$Zn$_x$Fe$_{2a-y}$Ti$_{1-a}$Al$_y$O$_4$, for low microwave use 1=6373
Lu iron garnet, ferrimag. resonance, heat treatment 4=20573
LiFe garnet, magnetoacoustic parametric reson. 4=12630
LuFe garnet, square hysteresis loops 3=15868
MFe$_2$O$_4$, spin-wave theory 2=8652
MO. Mn$_2$O$_3$ (M = Mn, Co, Zn, Mg), triangular moment arrangement 0=4499
MeFe$_2$O$_4$ (Me=Ni, Co, Fe), spinel structure and mag. moment 1=20563
Mg ferrite, atomic displacements 2=3913
manganese ferrite, cobalt-substituted, magnetocrystalline anisotropy 0=1808
Mg ferrite, growth orientation 1=6494
Mg, ferrimagnetic resonance 1=11468
Mg ferrite, ionic distrib. var. by heat treatment 0=4503
Mg, iron-rich, magnetic after-effect 1=20138
Mg ferrite, nonstoichiometric, cation distrib., erratum 4=17810
manganese, single crystal, influence of mag. field on thermal cond. 0=9866
MgAl, prep. and props. of monocrystals 1=20440
MgAl ferrite, prep. and props. of monocrystals 2=4381
Mg ferrite-aluminates, saturation mag. rel. to parameters 4=7287
MgCuCr, ferrimagnetic resonance 3=6743
MgCuCr ferrite, ferrimagnetic resonance 2=21354
Mg ferrite–magnetite, anisotropy 1=20141
Mg—Fe ferrite containing Co, hysteresis loops associated with Perminvar 4=20556
Mg ferrite–magnetite, mag. cryst. anistropy 2=18920
Mg—Fe, magnetic prop. changes on heat treatment ordering 4=13241
MgFe, molec. field coefficients 0=1809
Mg—Fe, uniaxial induced mag. anisotropy 4=10292
Mg–Mg, arbitrary cyclic magnetization 0=6242
MgMg ferrite, effective anisotropy 2=8654
Mg–Mn ferrite cores, partial switching 0=11006
Mg–Mn cores, square-loop, flux reversal 3=1084
Mg—Mn, demagnetizing energy 3=9899
MgMn ferrite, domain structure 4=13238
MgMn, domain wall motion inhibition 3=15872
MgMn ferrite, effect of firing 2=12792
MgMn ferrite, ferrimag. resonance width 2=18936
MgMn, ferromag. resonance 1=5070
Mg–Mn ferrite, ferromag. reson line width 4=26360
Mg Mn ferrite, hysteresis, effect of mag. after-effects 6=2674
MgMn ferrite, hysteresis loops, rectangularity 3=13272
Mg—Mn, improvement by Ti^{4+}—Ni^{3+} ion group substit. 4=20555
manganese magnesium, inner demagnetizing factor, relation with porosity and permeability 1=17975
Mg—Mn ferrites, ion distribution and valence 1=14738
MgMn ferrites, magnetic after-effect 1=14739
MgMn ferrites, mag. after-effect due to electron diffusion 0=11892
Mg–Mn, for memory cores 0=9139
Mg—Mn ferrite with narrow ferromag. resonance absorption curve 1=1253

Ferrites—contd
MgMn, new materials for memory cores 3=15875
Mg—Mn, permeability, var. with freq. and field strength 4=10290
MgMn, "Perminvar" effect and after-effect 0=3078
Mg–Mn ferrite, powder-figure study of domains 1=17977
MgMn, prep. and props. of monocrystals 1=20441
MgMn ferrite, prep. and props. of monocrystals 2=4382
MgMn ferrite, with rectangular hysteresis loops, domain structure 2=23676
MgMn ferrite, resonance curve width and mag. props. 1=12537
MgMn ferrite, resonance curve width and mag. props. 1=14734
MgMn, rotational hysteresis losses 3=18101
MgMn spinels, ferromag. reson. line widths, temp. and freq. depend. 3=23210
MgMn, squareness of hysteresis loops 0=13823
MgMn, wall effect in ferrimag. resonance 1=1254
MgO. MnO. Fe$_2$O$_3$ computer components 0=3085
MgO. MnO. Fe$_2$O$_3$, computer memory core material 0=9136
MgO—MnO$_t$—Fe$_2$O$_3$, properties rel. to Sc$_2$O$_3$ addition 3=20613
MgNi ferrites, cation distributions 1=6520
MgNi ferrite, resonance of domain walls 2=14799, 18918
MgZn ferrite, for carrier-wave technique 2=16922
MgZn ferrite, isoperm effect, temp. depend. 2=23684
Mg–Zn, magnetic permeability, time decrease 1=12540
MgZn, neutron diffraction study 3=23184
MgZn ferrite, spontaneous isoperm loop 2=23683
Mg–Zn–Fe, permeability, temperature depend. 1=14740
Mn, anisotropy, induced uniaxial, effect on impulse behaviour 3=15893
Mn ferrite, Co substituted, microwave resonance linewidth 2=12804
Mn, decay phenomena, rel. to domain walls 3=8689
Mn ferrite, disaccomodation rel. to cation vacancies 3=11097
Mn ferrites, domains study by Kerr effect 3=13276
Mn ferrite, edge and screw dislocations 2=18590
Mn ferrite, effect of Li subst. on mag. props. 3=15891
Mn ferrite, effective anisotropy meas. 2=8654
Mn, elec. cond. and long. magnetoresistance, temp. depend. 0=11665
Mn ferrite, elec. resistivity and thermoelectric power, anomaly near Curie pt. 4=17492
Mn ferrite, ferrimagnetic res. at high power 0=10204
Mn ferrite, ferrimagnetic resonance 2=16929, 18935
Mn, ferromagnetic resonance, absorption line width increase near Curie point 1=14773
Mn, ferromagnetic resonance absorption line width increase near Curie point, 1=20180
Mn, ferromag. reson., effect of excess Mn 1=14774
Mn, Hall effect 1=17627
Mn, Hall effect and semicond. props. 0=7935
Mn, hysteresis loop rectangularity, crystalline anisotropy 0=11886
Mn, lattice const. and X-ray refl. 3=3304
Mn, magnetization 3=15890
Mn ferrite, magnetization switching, u.s. study 1=12539
Mn ferrite, magnetocaloric effect, meas. 0=2853
Mn, magnetostatic modes in disks and rods 0=16154
Mn, Mn—Mg, rectangular hysteresis loop 3=23189
Mn and Mn zinc, spontaneous magnetization 0=13743
Mn ferrite monocrystals, electrical conductivity 3=20334
Mn ferrite, neutron irrad., effect on structure and mag. props. 4=13242
Mn, non-stoichiometric, elec. cond., −50° to +300°C 0=11656
Mn ferrite, paramag. susceptibility temp. depend. 4=26272
Mn, permeability peaks due to vacancy diffusion 1=20137
Mn ferrites, prepared at various oxygen pressures, props. 0=11889
Mn ferrites, props. at 10 kMc/s 1=14737
Mn ferrite, resonance curve width and mag. props. 1=12537
Mn ferrite, resonance curve width and mag. props. 1=14734
Mn, semicond. 4=12905
Mn, single-crystal, microwave generation, second harmonic 1=14751
Mn ferrite, solid solutions, effect of oxidation 2=4232

Ferrites—contd
Mn ferrite spheres, high power effects on ferrimagnetic resonance 0=8081
Mn, spherical specimen, distortion and hysteresis at high power 0=8079
Mn ferrite, structure and thermal treatment effects 2=23935
Mn ferrite, sublattice mag. moments 2=748
Mn-ferrite, u.s. propag., at high mag. field 4=20202
$Mn_xFe_{3-x}O_4$, $0.2 \leqslant \times \leqslant 1.15$, anisotropy 0=21054
$Mn_xFe_{3-x}O_4$, conductivity, electrical, low temps. 4=1548
$Mn_xFe_{3-x}O_4$, ferrimagnetic reson., 1.5-300°K 4=13293
$Mn_xFe_{3-x}O_4$, mag. anisotropy, magnetoresistance 3=13270
$Mn_xFe_{3-x}O_4$, mag. anisotropy, origin 3=11058
$Mn_xFe_{3-x}O_4$, magnetostriction consts. 3=1031
$Mn_xFe_{3-x}O_4$, neutron-diffraction study 3=1114
$Mn_xFe_{3-x}O_4$, $x = 0$ to 1.9, mag. props. 0=2998
$Mn_xFe_yO_4$, specific heat, 1.5-6°K anomaly 3=15435
$Mn_xFe_{3-x}O_{4+v}$, initial permeability time decrease 0=11887
$Mn_xFe_{3-x}O_{4+\gamma}$, magnetic relaxation spectrum 1=17976
$Mn_xFe_{3-x}O_{4+\gamma}$, permeability and saturation magnetization 2=746
$Mn_xFe_{3-x}O_{4+\gamma}$, relaxation spectrum 3=1037
$Mn_xFe_{3-x}O_{4+Y}$($x > 1$, disaccommodation spectrum, role of Fe^{2+} and cation vacancies 4=13237
$Mn_{0.6}Fe_{2.4}O_4$, relaxation, wall stabilization, var. cation vacancy conc. 4=10291
$MnO.Fe_2O_3$, domain obs. by Kerr effect 3=15864
$MnFe_2O_4$, ferrimag. reson., temp. var. 4=13290
$MnFe_2O_4$, low-field magnetization, temp. depend. 3=13271
$MnFe_2O_4$, Mn^{55} n.m.r. 3=15965
$MnFe_2O_4$, $Mn^{3+}O_6^{2-}$ distorted octahedra 2=21520
$MnFe_2O_4$, $Mn^{3+}O_6^{2-}$ tetragonally distorted octahedra 2=3913
$MnFe_2O_4$, n.m.r. of Mn^{55} 4=28901
$MnO.Fe_2O_3$, phase transform., -75°C, elec. props. study 1=14381
$MnFe_2O_{4+x}$, cation distrib. in spinel lattice 0=3239
$MnFe_2O_4 : Mn_3O_4$, magnetoresist., quadratic law 1=14380
$Mn_{1.03}Fe_{1.97}O_4$, crystal structure 3=13463
$Mn_{1.16}Fe_{1.84}O_4$, elec. props., heat treatment depend. 3=22949
$Mn_{1+x}Fe_{2-x}O_4$, remag. expts. 0=3076
$Mn_{1+x}Fe_{2-x}O_{4+y}$, hysteresis loop, rectangularity 0=3077
$Mn_{1+x}Fe_{2-x}O_{4+y}$, ion distrib. and valencies, Curie temp. and mag. moment 0=11888
MnCo, mag. props. at low temps. 1=20132
MnCo, mag. props. at low temps. 3=5023
MnCo ferrite, magnetocryst. anistropy 2=747
Mn—Cu, hysteresis, rect. loop developt. at low temps. 4=28841
Mn—Fe, ferrimag. res. line width 0=3122
MnFe ferrite, low temp. anistropy 2=12693
Mn—Fe, mag. viscosity and hysteresis 3=6724
Mn—Fe, rectangular hysteresis by heat treatment 4=17662
MnFe ferrite, square-loop, for memory cores 1=11450
MnMg ferrite, approach to mag. saturation 2=21336
MnMg, domain wall velocity 1=14736
Mn—Mg ferrites, ferromagnetic resonance line width increase 1=14773
Mn—Mg ferrites, ferromagnetic resonance line width increase 1=20180
MnMg ferrite (Ferroxcube D.1.), magnetocrystalline anisotropy and coercivity 1=20127
MnMg ferrite (Ferroxcube D.1.), relaxation, temp. depend. 1=20128
MnMg, hysteresis loop rectangularity 1=20133
MnMg, hysteresis loop rectangularity temp. depend. 0=6240
MnMg, internal demagnetization, hysteresis loop rectangularity 0=6241
Mn—Mg, with rect. hysteresis loop, rel. to composn. 4=15654
Mn—Mg ferrite, rectangular, switching rel. to grain size 4=28843
Mn—Mg type, mag. props. rel. to Sc_2O_3 addition 4=13239
MnMgAl ferrite, use in linear-accelerator isolator 0=12656
Mn—Mg—Co, critical microwave field strength 3=3160
MnMgCo ferrite, ferromag. resonance 2=14815

Ferrites—contd
Mn—Mg—Co ferrite, subsid. resonance, rel. to crit. microwave fld. strength 3=18121
Mn and Ni ferrites, with excess Fe_2O_3 and small Co^{2+} ion additions, properties 4=1843
Mn and Ni ferrites with magnetite, mag. after-effects 3=1036
Mn and Ni ferrites, spiral structr., containing Co, magnetocryst. anisotropy and mag. orientation 4=10287
$MnTi_xFe_{2-x}O_4$, magnetocrystalline anisotropy, 4° to 225°K 3=1028
Mn—Zn ferrite, ageing of permeability 1=2485
Mn Zn, with all known hysteresis loops 1=7767
Mn—Zn ferrite, Curie temp. rel. to press. 4=26340
Mn—Zn ferrites, disaccommodation, effect of Li addition 3=20611
Mn—Zn ferrite, effect of introduction of K ions on props. 0=11890
MnZn, elec. conductivity 1=17635
MnZn ferrite, electron diffr. crystallography 2=21525
MnZn ferrite, ferrimag. resonance, subsidiary absorption 1=9049
Mn—Zn, grain growth rel. to powder parameters 4=20782
Mn—Zn ferrites, granular structr., mag. and elec. props. 3=1083
Mn—Zn, growth, effect of voids and inclusions 3=3269
Mn—Zn, high permeability on reduction in vacuo. 4=23021
Mn—Zn ferrites, induced anisotropy and disaccommodation 3=1034
Mn—Zn, influence of mag. field on thermal cond. 0=9865
MnZn ferrite, initial permeability, γ-ray effects 2=8617
Mn—Zn, initial permeability, temp. depend., subsid. maxima 1=14741
MnZn ferrites, mag. after-effect and permeability time decrease 1=20136
MnZn ferrite, mag. curves rel. to pressure 3=13277
Mn—Zn, magnetic permeability, time decrease 1=12540
Mn—Zn, mag. props., grain structure 0=3075
Mn—Zn, melt type, high-permeability, low-loss, production 1=2483
MnZn ferrite, permeability, freq. depend. meas. 0=10166
MnZn ferrite, polycryst., crystal growth kinetics 2=23821
MnZn ferrite, props., effect of K ions 1=20135
Mn—Zn, relaxation phenomena 1=17974
Mn—Zn ferrite single crystals, effect surface on resonance parameters 0=10195
Mn—Zn ferrites, sintering rel. to pressed density 1=20648
MnZn, specific heat 20-350°C 0=7853
Mn—Zn, spontaneous isoperm loop, low relative remanence 0=18204
MnZn, thermal cond., mag. field effects, 1.4-25°K 1=4972
MnZn ferrites, thermoelec. props. 2=8454
MnZn ferrites, V-doped, initial permeability characteristics 1=6371
MnZnFe ferrite, anisotropy constants 2=18919
Mn—Zn—Fe ferrites, permeability, anisotropy 3=20619
Ni ferrite, as acoustic pickup 1=2487
Ni, for acoustic transducers, props. 1=5323
Ni, anisotropy, prod. by rotary field tempering 3=15892
Ni ferrites, anisotropy prod. by thermomechanical treatment 1=20140
Ni ferrite, anistropy rel. to vacant cation sites 2=10673
Ni ferrite, atomic displacements 2=3913
Ni ferrite, Co-substituted, field induced anisotropy 2=12791
Ni ferrite, elastic modulus and internal damping rel. to mag. fld. and frequency 4=23186
Ni, elec. cond., effect of Mn content 4=6982
Ni ferrite, ferrimag. resonance, rel. to internal field 2=10690
Ni ferrite, ferromag. cryst. anisotropy 2=2277
Ni ferrite, ferromag. resonance 2=10686
Ni ferrite, ferromag. resonance line width 3=1160
Ni, ferromag. resonance linewidths 4=7305
Ni ferrite, fine-grained, prep. and props. 1=6356
Ni ferrite, fine particles, ferromag. resonance 3=1161
Ni ferrite, growth orientation 1=6494
Ni ferrite, growth and props. of single crystals 3=3270
Ni, Hall effect 1=11265
Ni-, induced mag. anisotropy, rel. to composition 4=14243

Ferrites—contd
Ni ferrite, initial permeability, effect of wall dimensions 3=3123
Ni, initial permeability, var. only with wall dimensions, and not density or porosity 4=4386
Ni-ferrite, mag. moment and anisotropy const. rel. to temp. 4=15655
Ni, memory core, switching properties 3=15874
Ni ferrite with Mn impurity elec. props. 2=6471
Ni, n.m.r. of Fe^{57}, pulsed method meas. 4=4426
nickel ferrite, oxygen deficient, electrical resistivity 0=7945
Ni, permeability and domain walls 1=20139
Ni, permeability peaks due to vacancy diffusion 1=20137
Ni, polycryst., spin waves 3=3126
Ni porous ferrites, effect of CoO at v.h.f. 1=6370
Ni ferrite, reaction kinetics of Ni formation 1=7902
Ni, resistivity, change on mag., anisotropy 3=17927
Ni, resistivity changes in mag. field 0=11664
Ni ferrite, resonance curve width rel. to Co and Cu ions 2=760
Ni ferrite, single crystals prep., mag. props. 3=13274
Ni, ferrite, solubility of Ni, high resistivity 2=2415
Ni, thermomag. props 0=6229
Ni, wall effect in ferrimag. resonance 1=1254
$Ni^{2+}_{0.75}Fe^{2+}_{0.25}Fe^{3+}_{2}O_4$, energy anisotropy, temp. and mag. field depend. 4=26338
$(NiO)_{0.75}(FeO)_{0.25}Fe_2O_3$, ferrimag. res. loss mechanisms 2=21355
$NiFe_2O_4$, elec. cond. 2=14506
$NiFe_2O_4$, Fe^{57} Mössbauer effect, internal fields 1=9037
$Ni_2Fe_2O_4$, films, Faraday rotation and mag. hysteresis 3=15655
$NiFe_2O_4$ films, optical Faraday effect 4=22879
$NiFe_2O_4$, flux growth by Czochralski method 3=16043
$NiO. Fe_2O_3$, gyromagnetic ratio 1=11461
$NiFe_2O_4$, sp. ht., 1.8-20°K 2=571
$NiO(Fe_2O_3)_{0.95}$, semiconducting props. 1=1082
Ni–Fe–O system, phase equilibria 2=2404
$Ni_{1-x}Fe_{2-x}O_4$, elec. cond. rel. to temp. 2=10445
$Ni_xFe_{3-x}O_4$, ferromag. resonance, anisotropy and g-value 2=18933
Ni ferrite aluminate, ferromagnetic resonance 0=10197
NiAl ferrite, subsidiary absorpt. effects 2=12746
$NiO.(1-x)Fe_2O_3. xAl_2O_3$, ferrimag. compensation pts. 3=13268
NiAlGa ferrite, for use at high signal levels 2=14805
NiAlGa spinels, microwave power handling capacity improvements 4=13245
NiCd ferrite, Co. Mo additions, Perminvar characteristics 2=12692
NiCd, ferromagnetic resonance 1=14775
$Ni_{1-x}Cd_xFe_2O_4$, ferromagnetic resonance at 9.7-24 kMc/s 1=3923
NiCo ferrite, as acoustic pickup 1=2487
Ni–Co, diffusion after-effect 1=2486
Ni–Co, Fe-deficient, induced anisotropy at low temp. 4=20558
NiCo, ferrimagnetic resonance 1=11468
NiCo ferrite, ferromagnetic resonance 0=10208
Ni–Co, size effects on ferrimag. resonance absorption 0=21066
$Ni_{1-x}Co_xFe_2O_4$, mag. anisotropy 3=1033
$Ni_{1-x}Co_xFe_2O_4$, microwave props., high power 4=13244
$Ni_{1-x}Co_xFe_2O_4$, vol. dependence of ferrimag. resonance 0=10207
Ni and Co ferrite–chromite series, anomalous mag. moment 3=25544
Ni–Co–Mn, (E 1), magnetomechanical coupling, rel. to polarizing field 4=7289
$Ni_{1-x}Co_xMn_{0.02}Fe_{1.9}O_{4\pm}$, $x = 0-0.06$, various densities, initial permeability 0=3083
$Ni_{0.98-x}\ Co_x\ (Mn_{0.02}\ Fe_{1.98})$, $x = 0.027$, magnetostriction 4=4370
Ni–Cu, size effects on ferrimag. resonance absorption 0=21066
$Ni_{0.2}Cu_{0.8}Fe_{1.9}Mn_{0.02}O_4$ d.c. resistivity and Seebeck voltage 4=26055
NiCuZn ferrite, ferrimagnetic resonance 2=761
Ni–Cu–Zn, size effects on ferrimag. resonance absorption 0=21066
Ni ferrite–magnetite, anisotropy 1=20141
Ni-Fe, Barkhausen effect, direction, in rotating disk 3=11067

Ferrites—contd
NiFe, mag. anisotropy, influence of empty cation sites, 200-300°C 3=6726
Ni–Fe ferrites, mag. fld. induced anisotropy rel. to Ni conc. 4=13250
Ni-Fe, magnetic props. 0=3082
Ni ferrite–magnetite, mag. cryst. anistropy 2=18920
NiFe, magnetocrystalline anisotropy, 4.2-300°K 4=13247
Ni–Fe ferrite, natural ferromag. res. 3=3156
Ni–Fe ferrite, relaxation loss 3=8691
Ni–Fe ferrites, with small Co-substitution, induced anisotropy 3=1035
NiFe ferrite, square-loop, for memory cores 1=11450
NiFe garnet, fine grain, ferrimagnetic reson., dielectric loss, microwave meas. 4=13299
NiFe garnet, magnetostrictive displacement of O ions 4=13246
NiMg ferrite, susceptibility, anomalous, near Suhl threshold 4=28844
$NiMgFe_2O_4$, prep. from oxalates 2=14798
NiMn, thermoelec., 100-500°C 4=30670
$NiFeO_4$–Fe_3O_4–$MnFe_2O_4$, square-loop props. 4=20557
$Ni_{0.253}Mn_{0.02}Co_{0.027}Fe_2O_4$, mechanical resonance frequency rel. to mag. polarization and temp. 4=7290
NiZn ferrite, as acoustic pickup 1=2487
Ni–Zn, arbitrary cyclic magnetization 0=6242
NiZn ferrite, for carrier-wave techniques 2=16922
Ni–Zn, Co-substituted, diffusion after-effect 4=4377
Ni–Zn, Co-substituted, magnetic props. 4=13248
NiZn ferrite, with Co, temp. depend. 2=12790
NiZn ferrite, with CoO inclusions, mag. spectrum, temp.-depend. 2=12793
NiZn ferrite containing Co, mag. annealing 2=8651
Ni–Zn ferrite, dielectric relaxation, elec. cond. 0=18096
Ni–Zn, diffusion aftereffect below 90°K 3=5022
Ni–Zn ferrites, disaccomodation, rel. to γ-irrad. 3=11095
NiZn ferrite, disaccommodation mechanism, rel. to Fe^{2+} ion 2=16921
NiZn ferrite, disaccommodation by small amplitude 4=28845
Ni–Zn, elec. conduct. rel. to porosity 3=4939
Ni–Zn, elec. cond., temp. depend. 0=564
Ni–Zn ferrites, electric rel. to magnetic properties 3=8684
Ni–Zn ferrites, electrical props. 3=20336
Ni–Zn, elec. resist., pressure depend. 3=4940
NiZn, Fe-rich with Co, "Perminvar" effect 0=10175
Ni–Zn, Fe-rich ferrites, relaxation phenomena 0=8061
NiZn, ferromagnetic relaxation 1=17973
NiZn, ferromagnetic reson., 4·2 and 293°K, 3·2cm 3=6740
Ni-Zn ferrite, ferromagnetic resonance and g-factor det. 1=6388
Ni–Zn, 4B and 4E, hollow cylinders, magnetization, effect of twisting moment 4=13249
Ni–Zn ferrites, granular structr., mag. and elec. props. 3=1083
Ni–Zn, growth, effect of voids and inclusions 3=3269
NiZn, Hall effect and semicond. props. 0=7935
Ni–Zn, heat treatment effects 1=6359
NiZn ferrite, hysteresis loop, rel. to compos. 2=15981
NiZn ferrite, hysteresis loop, effect of Co additions 2=21337
NiZn ferrite, initial permeability, γ-ray effects 2=8617
NiZn ferrite, irreversible magnetic stress effects in Raleigh region 3=8690
Ni–Zn, magnetic permeability, time decrease 1=12540
Ni–Zn, magnetization intensities 0=678
NiZn, magnetization, meas. using ferromag. resonance 1=1240
Ni–Zn, n.m.r. of Fe^{57}, pulsed method meas. 4=4426
Ni–Zn ferrites, permeability in polarizing fields 4=26341
NiZn ferrite, permeability spectra, temp. depend. 2=23677
NiZn ferrite, polycryst. crystal growth kinetics 2=23821
NiZn ferrite, production and applications 4=28846
Ni–Zn ferrites, props. at 10 kMc/s 1=14737
NiZn, remanence aftereffect 1=6358
NiZn, solubility of excess Fe_2O_3 1=6487
NiZn solubility of ferric oxide 0=21232
NiZn, specific heat, 20-350°C 0=7853
NiZn, thermal conductivity 3=17669

Ferrites—contd
Ni–Zn, thermal cond. meas., 20°-400°C 3=25214
NiZn, thermal and elec. conds., Curie points, 50-350°C 3=20618
Ni–Zn ferrites, X-ray investigation using CoKα radiation 0=16326
NiZn, Young's mod. and internal friction 0=11971
0.2 Ni–0.8 $ZnFe_2O_4$, props., 1.8–20°K 2=571
$Ni_{1-x}Zn_xFe_2O_4$, prep., mag. and microwave props. 2=12696
$NiFe_2O_4$–$ZnFe_2O_4$ systems, mag. structure meas. 4=7291
Ni–Zn–Co, complex permeability, freq. var., heat treatment effects 4=4385
Ni–Zn–Co, effect of annealing in mag. field 3=3130
NiZnCo, films, prep. and mag. props. 3=16140
NiZnCo ferrite, mag. dispersion rel. to sintering temp. and composition 3=18100
Ni–Zn–Co, magnetocryst. anisotropy and prod. 3=23190
NiZnCo, magnetoelastic effect 3=20614
Ni–Zn–Cr, with CoO, mag. anisotropy, -196° to 300°C 4=30722
Ni – Zr Cr ferrite, Faraday effect rel. to permittivity 3=1050
Ni–Zn–Cr, magnetic props rel. to thermal and thermo-magnetic treatment 4=10293
Ni–Zn–Cu, permeability, frequency depend., -80° to +232°C 1=14742
Pb, magnetization, temp. dependence 1=11449
Pb ferrite, susceptibility, temp.-depend., above Curie pt. 4=15656
$PbFe_{12}O_{19}$ (magnetoplumbite), dislocations, visualization by etching 2=18587, 23176
$PbO.6Fe_2O_3$, magnetization 0=675
PbBa ferrite, mag. props., composition depend. 4=13235
Pb–K Fe garnet, magnetic exchange anisotropy 4=13230
PbSr ferrite, mag. props., composition depend. 4=13235
Pr, ortho, effect of substituting Al^{3+} for Fe^{3+}, from mag. meas. 3=8683
$Pr_2O_3.Fe_2O_3$, hysteresis, effect of temp. 0=13834
SmFe garnet, far i.r. absorption spectrum 3=15680
Sr, magnetization, temp. dependence 1=11449
Sr ferrite, modified, new permanent magnet material 3=15881
Sr ferrite, powder, single-domain magnetic props. 3=15880
Sr ferrite, susceptibility, temp.-depend., above Curie pt. 4=15656
Sr–K Fe garnet, magnetic exchange anisotropy 4=13230
TbFe garnet, magnetoelastic coupling constants 3=15886
TbFe garnet, magnetostriction, anomalous 4=1845
$Ti_mMg_nFe_{3-m-n}O_4$, ferromagnetic resonance and magnetization, 78-300°K 1=3924
$Tl_{1/2}La_{1/2}Fe_{12}O_{19}$, prep., crystal structure and mag. props. 4=7292
$TmFeO_3$, torque curves, anisotropy 1=7770
Y ferrite, ferromagnetic resonance 3=6738
Y ferrites, hydrothermal synthesis 3=18272
Y, initial permeability, var. with freq., temp., garnet struct. 3=6723
Y ferrite, noise 3=20631
Y ferrites ($5Fe_2O_3.3Y_2O_3$), paramag. susceptibility 1=20142
$Y_3Fe_3O_{12}$, Faraday effect at 1-9μ 0=13677
$Y_3Fe_5O_{12}$, ferromagnetic resonance 0=6251
$Y_3Fe_5O_{12}$, neutron diffr. exam. 3=23186
$Y_3Fe_5O_{12}$ (yttrium–iron garnet), crystal growing 0=13953
yttrium garnet, ferrimag. resonance, variation of mag. moment 0=6253
Y garnets, ferromag. reson., temp. depend. 0=11929
Y garnets, investigation near Curie pt. 1=10172
yttrium garnet, mag. moment variation study by ferrimag. resonance 0=6253
Y garnet with rare-earth impurities, resonance line width 3=25558
yttrium garnet, substituted, effect of porosity on absorption width 0=8076
Y ferrite garnets, with Al^{3+} and Cr^{3+}, mag. props. 0=13835
YFe garnet, crystal field calc. for 3 sites 3=2693
YFe garnets, detection of flaws 0=6341
YFe garnet, dipolar ferrite modes, theory and application 0=9188
YFe garnet disk, harmonic generation 0=9187
YFe garnet, domain structure 2=751
YFe garnet, etching 3=18240

Ferrites—contd
YFe garnet, exchange splitting, optical observation 0=6186
YFe garnet, ferrimagnetic parallel pumping spin-wave anisotropy 4=13294
YFe garnet, ferrimagnetic resonance 1=11468
YFe garnet, ferrimagnetic resonance 2=18934
YFe garnet, ferromag. relaxation at low temp. 1=14777
YFe garnet, ferromag. relaxation mechanism for M_z 0=10200
YFe garnet, ferromag. resonance freqn. shift 4=7308
YFe garnets, ferromag. reson. line widths, temp. and freq. depend. 3=23210
YFe garnet, ferromag. reson., room temp. to Curie point 1=14776
YFe garnet, heat transport by spin waves 3=8374
YFe garnet, high power effects in ferrimagnetic resonance 0=8080
YFe garnets, impurity-doped, ferrimag. resonance 0=10211
Y Fe garnet, initial permeability, var. density, 5 kc/s-7.5 Gc/s 4=13252
YFe garnet, low-temp. specific heat, spin wave contrib. 4=9855
Y Fe garnet, magnetic anisotropy, induced, with Si and Mn additions 4=13254
Y–Fe garnets, magnetic annealing 0=3091
YFe garnet, mag. domains, effect crystal growth 2=14800
YFe garnet, mag. and elec. props. 0=3093
YFe garnet, magnetic lag effects 0=3092
YFe garnet, mag. meas. and mol. field model 4=20559
YFe garnet, mag. reson., strong dispersion, field var. 4=26363
YFe garnet magnetoacoustic resonance 0=3862
YFe garnet, magnetoelastic interactions in parallel pumping 3=15884
YFe garnet, magnetoelastic r.f. pulses, freq.—time—mag. field characteristics 4=12632
YFe garnet, magnetostriction 3=15852
YFe garnet, magnetostrict., meas. and theory 3=15901
YFe garnet, microwave absorption in parallel-pumping expts. 3=15883
Y iron garnet, microwave magnetic and dielectric props. 0=11896
YFe garnet, multiple magnon processes 3=18122
YFe garnets in pulsed mag. fields, resonance expts. 0=10177
YFe garnets, r.f. dispersion, electron diffusion effects 1=20125
YFe garnets, rare-earth doped, ferrimag, resonance 1=6406
YFe garnet, rare earth doped, ferrimag. reson. 4=13295
Y Fe garnet, rare earth substituted, flux reversal speed 4=13253
YFe garnet, relax., near instability threshold 3=3157
YFe garnet, relaxation at low microwave frequencies 1=6402
YFe garnet, resonance curve width and mag. props. 1=12537
YFe garnet, resonance curve width and mag. props. 1=14734
YFe garnet, resonances in waveguide, effect of freq. modulation 2=6658
YFe garnet, rotational magnetization reversal 3=15873
YFe garnet, Sb^{5+} substituted for Fe^{3+}, mag. moment var., Curie temp., and crystallography 4=26344
YFe garnet, single crystal, saturation magnetostriction 3=15888
YFe garnet spheres, instability of mag. resonance 0=10210
YFe garnet, spin lattice relaxation 0=6260
YFe garnet, spin-wave growth under parallel pumping 3=15899
YFe garnet, spin-wave propag. and magnetoelastic interaction 3=15889
YFe garnet, spin-wave propag. proposed expt. 2=4233
Y Fe garnet, spin-wave resonance curve width rel. to Dy impurity 4=10305
YFe garnet, spin-wave spectrum anisotropy 3=23209
YFe garnet spin-wave spectrum, temp. dependence 1=6353
YFe garnet spin wave transitory growth on microwave pumping 4=13227
YFe garnet, spin waves excited by parallel pumping 4=10285
YFe garnet, square hysteresis loops 3=15868
YFe garnet, subsidiary resonance at 9253 Mc/s 1=6407
YFe garnet, substitution lattice site effects 4=26343

Ferrites—contd
  YFe garnet, 2-magnon scatt. processes 3=15916
  YFe garnet, wall effect in ferrimag. resonance 1=1254
  YFe garnet, Yb doped, ferrimag. reson., relax. theories 4=13296
  YFeAl ferrite, ferrimagnetic resonance 2=21354
  YFeAl, ferrimagnetic resonance 3=6743
  YGa garnet, absorpt. spectrum of Er^{3+} 3=13172
  $3Y_2O_3$. (5-x) Fe_2O_3. xGa_2O_3, mag. and elec. props. 0=3093
  (3-x)Y_2O_3. xGd_2O_3. $5Fe_2O_3$, initial permeabilities 0=10137
  Y—LaFe garnet, mag. props. and ferromag. resonance 4=1847
  YNd garnet, neutron diffraction investigation 3=23183
  (3-x)Y_2O_3. xR_2O_3. $5Fe_2O_3$, mag. and elec. props. 0=3093
  (3-x)Y_2O_3. xSm_2O_3. $5Fe_2O_3$, mag. props. 0=10136
  YbFe garnet, ferrimagnetic resonance 1=11468
  YbFe garnet, ferrimagnetic resonance in far i.r. 3=15930
  YbGa garnet, mag. suscept. and cryst. field levels 4=1846
  Zn ferrite, antiferromagnetism 0=8072
  Zn ferrite, atomic displacements 2=3913
  Zn, decay phenomena, rel. to domain walls 3=8689
  Zn ferrite, effect of grinding on coercive force 2=10664
  $ZnFe_2O_4$, grain growth and structure 2=4479
  $ZnFe_2O_4$, sp. ht. 1.8-20°K 2=571
  ZnBaFe garnet, magneto acoustic effects, parametric, 1.3 Gc/s 4=13255
  Zn—Mn ferrites, magnetoresistance near Curie point 1=14376
  Zn_2Y, spin-wave excitation in parallel pumping 3=15885
  (ZnY) ($Ba_2Zn_2Fe_{12}O_{22}$), linewidths and high-power props. of single-crystal spheres 4=7316

Ferroelectric devices

  crystal symmetry classification 0=1695
  crystals, ceramics, applications 3=13110
  digest of literature (1958) 0=2300
  digest of literature (1960) 2=5289
  $(glycine)_3BeF_4$, n. m. r. of F^{19}, and BeF_4 ion hindered rot. 4=10115

Ferroelectric materials—contd
  glycine sulphate, domain boundaries, X-ray topography 4=25943
  glycine sulphate, domain growth 2=4094
  glycine sulphate, domain structure 1=17543
  glycine sulphate, domain wall, dislocation catching 3=6618
  glycine (glycocol) sulphate, 85% deuterated, props. 0=4378
  glycine sulphate, imperfection effects 2=6520
  guanidine alumium sulphate, piezoelectricity, inverse 3=23008
  guanidine Al sulphate hexahydrate, anomalous behaviour 0=13578
  guanidinium Al sulphate hexahydrate, etch pits, dislocations 0=20818
  guanidine aluminium sulphate hexahydrate, γ-irrad., thermoluminescence 2=14759
  guanidine aluminium sulphate hexahydrate, hysteresis losses 2=16782
  guanidine Al sulphate hexahydrate, optical harmonic generation 4=10206
  guanidine aluminium sulphate hexahydrate, reorientation of $[C(NH_2)_3]^+$ 1=19923
  guanidine aluminium sulphate hexahydrate reorientation of $[C(NH_2)_3]^+$ 3=4941
  guanidine Al sulphate hexahydrate, spontaneous polarization reversal 0=18097
  guanidinium sulphate, γ-ray effects 3=17937
  hysteresis, under const. elec. field, R.C. bridge meas. 0=18095
  i.r. absorption, rel. to spontaneous polarization in 7 cpds. 0=650
  ice 4=22775
  internal friction, meas. by composite resonator method 3=20698
  laminar structures, X-ray diffr. studies 2=17026
  manganites of rare earths and Y, prep., dielec. props. 3=13119
  metaniobate solid solutions, relaxation polarization 0=16020
  methyl ammonium alum, low temp. phase, crystal structure, atomic 4=13616
  methyl ammonium alum, properties 1=11337
  microwave meas. of props., temperature control 1=7691
  n.m.r. temp. depend., rel. to props. 1=11496
  neutron diffraction studies 3=899
  perovskite structure, complex ABO_3 cpds. 2=16777
  perovskite substances containing Fe magnetic ordering, neutron-diffraction study 4=10239
  polarization measurement 0=7977
  polycrystalline ceramics, multiple shock-wave structures 1=11778
  polycrystalline titanates, as electrets 1=6199
  props. review, of eighty-three materials 2=21212
  pyrolusite, hysteresis and non-ferroelec. transition 0=11740
  rare-earth aluminates, crystal symmetry 0=14026
  Rochelle salt, acoustic absorption near lower Curie point 1=19704
  Rochelle salt, coercive field dispersion and jerky wall motion, low-freqs. 4=26126
  Rochelle salt, crystal structure, effect of ionizing radiations 4=7050
  Rochelle salt crystals, properties of different regions 1=10079
  Rochelle salt, dielectric non-linearity 0=13653
  Rochelle salt, domain structure 4=30652
  Rochelle salt, domain walls in sudarés 3=2959
  Rochelle salt, domains, polarizing microscope obs. 0=16010
  Rochelle salt, effect of Cu^{2+} doping on "delayed phenomena" 3=25404
  Rochelle salt, effects of γ-irradiation 1=14554
  Rochelle salt, effects of radiation damage 3=10883
  Rochelle salt, electrostriction 3=13121
  Rochelle salt, ferroelec. props. and oscillations in diel. pendulum 2=14611
  Rochelle salt, γ-irrad. thermoluminescence 2=14759
  Rochelle salt, γ-ray effects 2=12565, 14609
  Rochelle salt, hysteresis and relaxation times, rel. to ambient humidity 4=10113
  Rochelle salt, interaction of e. m. and sound waves 2=21211
  Rochelle salt, interaction of e.m. and sound waves 3=2949
  Rochelle salt, internal friction, ampl. depend. 4=15716

Ferroelectric materials—contd
Rochelle salt, meas. at 10 Gc/s rel. to temp. 4=26127
Rochelle salt, permittivity, rel. to applied elec. fld. 3=23001
Rochelle salt, permittivity meas., at 10 Gc/s, temp. and elec. bias field depend. 0=10017
Rochelle salt, permittivity during switching 2=18771
Rochelle salt, piezoelectricity and electrostriction 1=10078
Rochelle salt, polarization processes, in slowly varying fields 1=3805
Rochelle salt, polarization reversal in D-doped salt, Kerr effect study 0=18099
Rochelle salt, polarization, by single square pulses 1=17836
Rochelle salt, and Raman spectrum 3=20484
Rochelle salt, rapid "ageing" in hysteresis loops 2=10555
Rochelle salt, single-domain state 2=14621
Rochelle salt, transient phenomena, effect of X-rays 2=23500
Rochelle salt, u. s. absorption near Curie point 2=16600
Rochelle salt, unipolarity 1=19922
Rochelle salt, X-ray damaged, properties 1=14555
Rochelle salt, X-ray irrad. effects 1=10077
Rochelle scatt, electrocaloric effects meas. 3=25403
rutile, far i.r. props. 3=15687
rutile single crystals, space-charge-limited currents and polarization 3=895
solid solutions, thermodynamic props. 2=16785
technical materials, longevity at h.f. operation 0=632
tetramethylammonium mercury tribromide $[N(CH_3)_4HgBr_3]$ 3=13488
tetramethylammonium-trichloro-mercurate, props. 0=6155
tetramethylammonium-trichloro-mercurate, switching time 1=3807
tetramethylammonium-trihalo-mercurate family 2=4093
thermal conductivity, at low temp. 4=17381
thiourea 0=2921
thiourea, low-temp. phase, electron diffr. crystallography 3=18330
thiourea, props., rel. to crystal structure 2=667
thiourea, props. under high press. 4=26130
thiourea, transitions, hysteresis and thermal studies 2=12566
titanate ceramic, electrical ageing study. 1=12659
titanates, dielectric properties rel. to neutron irradiation 1=12475
titanates, various, permittivity, variation with temp. 2=21219
titanates, various, permittivity, variation with temp. 3=2953
transition-metal oxides, rel. to structure 0=20954
triglycinfluoroberylate, impedance during switching in pulsed field 4=1665
triglycine fluoberyllate, nature of transition, n.m.r. and i.r. study 1=17833
triglycine selenate, nature of transition, n.m.r. and i.r. study 1=17833
triglycine selenate, pressure effects up to 2700 atm 0=4379
triglycine sulphate, ageing 1=8930
triglycine sulphate, ageing process, rejuvenation by a.c. fields 0=18100
triglycine sulphate, asymmetric hysteresis and pyroelec. 0=1703
triglycine sulphate, coercive field frequency dependence 4=4217
triglycine sulphate, corrosion by domain boundaries 3=8563
triglycene sulphate, critical-pt. polarization fluctuations 3=893
triglycine sulphate, Curie transition temp., press. depend. 3=17938
triglycine sulphate, deuterated 3=13122
triglycine sulphate, deuterated, domain walls, etch pits 2=18770
triglycine sulphate, deuterated, prep. and props. 2=16775
triglycine sulphate, deuterated, pulsed polarization reversal 1=3804
triglycine sulphate, dielec. const. and loss tangents at 3.3 kMc/s 1=14551
triglycine sulphate, dielec. consts. and loss tangents at 3.3 kMc/s 2=16768
triglycine sulphate, diel. props., 40-60°C, 0.001-2500 Mc/s 0=16011

Ferroelectric materials—contd
triglycine sulphate, domain delineation, arrays prod. by thermal shocks 1=17834
triglycine sulphate, domain nucleation 3=6619
triglycine sulphate, domain structure 4=20426
triglycine sulphate, domain structure and motion 0=20956
triglycine sulphate, domain walls, nucleation sites 0=640
triglycine sulphate, effect of γ-radiation on diel. props. 1=17832
triglycine sulphate, effect of ultraviolet light 1=12476
triglycine sulphate, elastic constant, effect of d.c. field 2=14623
triglycine sulphate, elastic props. and internal friction 3=13323
triglycine sulphate, in electroluminescent devices 2=16871
triglycine sulphate, ϵ during polarization reversal 1=17835
triglycine sulphate, etch patterns, domain polarization 0=4601
triglycine sulphate, far i.r. props. 3=15687
triglycine sulphate, ferroel. props. at 0.01050 c/s 2=668
tri-glycine sulphate, ferroelec. statistical theory 4=17523
triglycine sulphate, γ-induced changes 4=15561
triglycine sulphate, γ-irrad., effect on props. 2=14622
triglycine sulphate, γ-irrad., switching mechanism 2=8673
triglycine sulphate, h.f., meas. and heuristic model 4=4218
triglycine sulphate, h.f. props. 2=14608
triglycine sulphate, high pressures, hysteresis 3=23004
triglycine sulphate, hysteresis loop, effect of X-rays 4=26131
triglycine sulphate, hysteresis losses 2=16782
triglycine sulphate, internal friction, ampl. depend. 4=15716
triglycine sulphate, inverse piezoelec. effect, various dependences 3=20391
triglycine sulphate, irradiated, e. s. r. analysis 2=2208
triglycine sulphate, locked and reversible polarization sectors 4=15767
triglycine sulphate, matrices for information storage 2=16779
triglycine sulphate monocrystals, elec. conductivity 1=6194
triglycine sulphate, n. m. r., <47°C 2=6710
triglycine sulphate, nature of transition, n.m.r. and i.r. study 1=17833
triglycine sulphate, non-linearity, var. with r.f., temp. 4=7052
triglycine sulphate, optical harmonic generation 4=10206
triglycine sulphate, optical harmonics from laser 2=17605
triglycine sulphate, permittivity increase during slow switching 3=2960
triglycine sulphate, permittivity and tanδ at 9600 Mc/s 1=1135
triglycine sulphate, phase transition 2=6521
triglycine sulphate, phase transitions 1=14556
triglycine sulphate, piezoelec. consts. 2=679
triglycine sulphate, piezoelec. and electrostrict. consts. 4=7051
triglycine sulphate piezoelec. props. 2=6531, 23508
triglycine sulphate plates, variation with thickness 1=11339
triglycine sulphate, polarization relaxation above Curie temp. 3=2961
triglycine sulphate, polarization reversal 2=10554, 16778
triglycine sulphate, polarization reversal, antiparallel domains 4=15560
triglycine sulphate, pressure effects up to 2700 atm 0=4379
triglycine sulphate, properties, rel. to γ-irradiation 3=20387
triglycine sulphate, props., 0. 01-50 c/s 2=14624
triglycine sulphate, pulsed polarization reversal, asymmetry 1=3803
triglycine sulphate, pyroelectricity, internal domains, and interface charges 0=6160
triglycine sulphate, switching, dielec. const. 2=16783
triglycine sulphate, switching mechanism 0=1694
triglycine sulphate, thermal expansion 0=7856
triglycine sulphate, thermal expansion 3=6481
triglycine sulphate, thermal expansion anomaly at Curie pt. 2=10335

Ferroelectric materials—contd
- triglycine sulphate, u. s. relax. near Curie temp. 4=6728
- triglycine sulphate–selenate, Curie point, composition depend., Devonshire coeff. 0=4380
- tri-hydrogen lithium selenite single crystals, dislocations 4=12750
- use as pyroelectric detectors for sub-mm wavelengths 4=16287
- "Vorkond", properties at 3000 Mc/s 0=16012
- Ag—ferroelec. two-phase systems 3=13109
- $BaBi_3Ti_2NbO_{12}$, structure and properties 1=7689
- $BaBi_4Ti_4O_{15}$, structure and properties 1=7689
- $Ba_2Bi_4Ti_3O_{18}$, props. meas. 2=12570
- $Ba_2Bi_4Ti_5O_{18}$, and substituted cpds, ferroelec. phase transitions 4=23255
- $BaLi_{2x}Al_{8-2x}Fe_{4x}O_{4-4x}$, props. 1=1137
- $Ba_6Nb_{28/3}Ni_{2/3}O_{30}$, props. 2=666
- $BaNb_2O_6$—$PbNb_2O_6$, mechanic. props. 4=1909
- $Ba(Nb, Ta)_2O_6$—$Sr (Nb,Ta)_2O_6$, diffuse phase transitions, relax. polarization 1=6195
- $Ba_{0.97}Pb_{0.03}TiO_3$, anomalous polarization and discharge currents 3=13120
- $(Ba,Pb)TiO_3$, crystal chemistry 1=15018
- $(Ba, Pb) TiO_3$, dielec. and piezoelec. props., composition depend. 1=20504
- $(Ba, Pb)(Ti, Sn)O_3$, phase diagram, dielec. and piezoelec. props. 0=21236
- $Ba_{6-2x}R_{2x})(Nb_{8-x}Fe_{1+x})O_{30}$, props. 0=11900
- $(Ba_{1-x}R_{2x/3})Nb_2O_6$, rel. to R is Y, Sm, or La 4=20417
- $(Ba, Sr)Nb_2O_6$, structure rel. to props. 0=8217
- Ba, Sr and Pb metaniobates in Na niobate 0=630
- $(Ba, Sr)(Ta, Nb)_2O_6$ 0=631
- $BaTiO_3$, aftereffects, temp. and applied voltage depend. 0=18104
- $BaTiO_3$, ageing of monocrystals 0=16014
- $BaTiO_3$, α domain crystal, direct obs. of 180° walls 4=7046
- $BaTiO_3$, anomalies at Curie temp. in elec. cond., dielec. const. and thermoelec. power 1=7690
- $BaTiO_3$, antiparallel 180° domains obs. 4=20418
- $BaTiO_3$, antiparallel 180° domains, visibility origin 4=7048
- $BaTiO_3$, asymmetric hysteresis loop, non-equivalent electrodes 1=17839
- $BaTiO_3$, asymmetric hysteresis loops 2=16798
- $BaTiO_3$—Bakelite, effect of particle size 1=3808
- $BaTiO_3$, Barkhausen pulses, origin, domain phenomena 1=17844
- $BaTiO_3$, breakdown field, rel. to temp. 4=10111
- $BaTiO_3$, at cm wavelengths 2=21216
- $BaTiO_3$ ceramic, dielec., piezoelec. props. 2=16790
- $BaTiO_3$ ceramic, high pressure investigations 2=669
- $BaTiO_3$ ceramic, neutron effects on ferroelec. props. 2=10559
- $BaTiO_3$ ceramics, domain statistical distribution 4=7045
- $BaTiO_3$ ceramics, neutron-irrad., in elec. field 3=896
- $BaTiO_3$ ceramics, resistance, elec., temp. var., anomalous, intergranular barrier model 3=25399
- $BaTiO_3$ circular disk, vibrations 3=20389
- $BaTiO_3$, Co addition effects, −80 to +120°C 3=22996
- $BaTiO_3$, coercive field, thickness depend. 4=12969
- $BaTiO_3$, complex permittivity, temp. depend. 0=16025
- $BaTiO_3$, Cr, Bi oxides doping, effect 2=16792
- $BaTiO_3$, crystal structure, refinement 3=1331
- $BaTiO_3$, crystals by floating-zone technique, props. 4=23330
- $BaTiO_3$, crystals, polarization thickness depend. 2=10557
- $BaTiO_3$ crystals, poling process 2=18775
- $BaTiO_3$, cubic—tetragonal transition, nucleation 3=4942
- $BaTiO_3$, Curie point reduction at high pressures 3=22994
- $BaTiO_3$, depolarization charge, rel. to piezoelec. effect 0=10019
- $BaTiO_3$, dielec. consts. theory 2=6523
- $BaTiO_3$, dielectric const. from X-ray diffr. profile 4=17520
- $BaTiO_3$, dielec. permeability from oscill. spectra, 45°—140°C 4=30677
- $BaTiO_3$, dielec. props., effect of one-dim. pressure 2=2209
- $BaTiO_3$, dielectric properties, effect of stress 1=8973
- $BaTiO_3$ disc and cylinder electromechanical const. design charts 4=16181
- $BaTiO_3$, domain conversion 3=13115

- polyethylene terephthalate, crystallinity meas. 0=14052
- polyethylene terephthalate, dynamic elastic moduli 3=8754
- polyethyleneterephthalate, mech. props., temp. depend. 3=23358
- polyethylene terephthalate, strength and molec. struct. 1=14136
- polyethylene terephthalate, structure 3=18372
- polymer, skin layers, microscopy, interference 4=13700
- polymers, orientated 1=20654
- polymers, orientated 2=4481
- polymers, structure, by light scattering 3=16127
- polymers, surface replication, by rolling 0=8263
- polypropylene, mech. props., temp. depend. 3=23358
- polypropylene, tensile strength, rel. to double refraction 3=23045
- polyvinylchloride, knitted, triboelectric properties 1=17859
- pore volume internal 3=13551
- in preferred orientations, X-ray evaluation 3=18400
- profile measurement 3=11647

Fibres—contd
quartz, fused, Young's modulus variation with diameter 1=1298
quartz, internal friction at low freq., expt. 4=13447
quartz, use in magnetic balance 0=19872
rubber, natural, 1000 A-thick films, rel. to irradiation 3=20919
running thread-line, temp. meas. 0=3683
S_{φ}, structure, atomic 3=18371
scattering of e.m. radiation by concentric cylinders 1=8241
scattering, simplified cylindrical distrib. function 2=15083
SiO_2, periodic structure 3=18370
silica, tensile strength 4=13444
silk, conductivity dependence on water content 1=7626
spider fibres, light scattering by infinite cylinders 1=2889
static electrification, dia. depend. 1=4549
statistical shape, bent by external forces 2=2663
stress analysis conference, Keele, Staffs. April(1960) 1=2500
surface replication, by rolling 0=10323
surfaces, preparation 3=16474
synthetic fibres, ion-bombardment etching 0=17052
teflon, n.m.r. study 0=21225
vibroscope, rotational, for torsional measurement 1=15775
vitreous silicate, structure 0=6372
wool, conductivity dependence on water content 1=7626
wool, self-heating pile, heat balance 2=8914
X-ray crystallography, specimen holder 3=13432
X-ray diffraction examination, review 4=13623
X-ray diffraction, rel. to fibre lengths 4=15811
X-ray examination, small-angle diffr. patterns 0=12089
X-ray scatt. exam. of polymer swelling 4=17746
X-ray scatt., glass, low angles, due to internal reflection and surface scatt. 4=29200
yarn and cord rubber models 1=6450
yarns and cords, rubber models 2=15084
yarns, fine, stress—strain curve, determ. by machine 4=15688

dispersion relns. appl. 2=11902
doublet theory for differing parities 3=17184
e. m. corr. calc. by S-matrix 4=27797
e. m. current in SU_3 symm., contrib. from triplets 4=27796
e. m. properties in unitary symm. theory 4=15001
effects on Feinberg—Pais weak interaction theory 4=19417
eightfold way, baryon—baryon interactions 3=24604
eightfold way, virtual bound state of N—N system 4=21766
elastic processes, applicability of criterion for spectral function 4=14013
rel. to elementary particle masses 4=30156
elementary particle scattering, relativistic, complex angular momentum 4=27801
elementary particle strong interaction symmetries, SU(4) model 4=9113
extended symmetry of strong and e.m. interactions 4=30174
fast particles, peripheral interactions 2=9778
fermions, mesonic interaction types 2=22407
final states, overlapping resonances effect 3=17195
fragile symmetry 3=10034
free-field eqns., group props. 3=12398
G_2 and SU_3 symmetry comparisons 4=3323
G_2 symm. model, triple product of septets, reduction 4=19379
G_2 vector meson bootstrap, negative result 4=25015
γ_5-invariance 2=9775, 20246
gauge invariance for neutral massive vector field 3=14888
gauge invariant theory 2=22463
generalized gauge invariance 1=5662
generally covariant, for strong interactions 2=9774
global symmetry, possible group schemes 3=14868
global symmetry, test for π—baryon system 1=10911
global symmetry theory for π-hyperon resonances 2=18162
group theoretical dynamical model 3=2192
high-energy, multiperipheral model 4=27806
high-energy processes, review 4=30181
higher symmetries, rel. to meson—baryon interaction 2=22413
higher symmetries, rel. to meson—baryon scattering 4=30180

Field theory, quantum—contd
interactions, strong—contd
higher-symm. models, discrete subgroup 4=9115
hypercharge independence and resonances 4=5973
"internal" conservation laws, vector fields coupled to conserved current 1=3126
isotopic spin conservation, upper limit 3=15046
isotopic spin indep. in high energy limit 3=7808
isotopic spin, possible nonconservation, rel. to π-hyperon resonances 2=18162
K^* resonance, dynamical model 3=19577
Λ—Λ potential, due to π exchange, fourth order 3=19707
Λ- and Σ-decays, up—down symmetries 2=7904
Lie group B_3, 7-dimensional scheme 3=12397
Lie group symmetries 4=15019
Lie groups, simple, appl. 4=15000
logarithmic singularities with two final-state interactions 4=11922
Mandelstam's programme in potential scatt. 3=10039
many-meson systems, decaying to π's 4=9254
mass splitting between group multiplets 4=24982
meson—baryon coupling constants, relations 1=7207
meson—nucleon scatt., rel. to unitary symm. 4=25121
meson prod. model 4=27798
model for high-energy phenomena 1=19242
model of mesons and baryons based on SU_3 symm. 4=11905
model, phenomenological 3=7853
multiperipheral model, high-energy integral eqn. 2=22431
N/D calc. of Pomeranchuk and ρ-Regge trajectories 3=15019
n—p weak current, renormalization effects 3=7862
Ne'eman—Gell-Mann theory, resonance decays, relative weights 3=22073
$\nu + N \rightarrow N + e$, rel. to inner structure of the nucleon 1=16768
nuclear, coupling between elast. and inelast. scatt. waves 1=19426
nucleon core, K—N 1=13325
nuclear forces, and zero-strangeness-boson exchange 2=16151
nucleon, hyperon, K-meson, renormalization, parity not conserved 1=7197
nucleon—meson field, Green functions 3=24605
N—N, high-energy, range, single-channel model 3=19620
nucleon and (3,3) resonance, "bootstrap" relationship 3=7841
nucleons, fast, inelastic collisions 2=9778
octet model, baryon charge and R-inversion 3=7785
octet model and Clebsch—Gordon coeffs, applic. 4=11026
octet symmetry, spontaneous breakdown 3=14869
P and CP invariance, rel. to $\eta \rightarrow 2\pi$ absence 4=19427
parity conservation, rel. to $Be^7(n,\alpha)He^4$ 3=17480
parity conserv. and particle—antiparticle conjug. invariances 2=18067
parity violation, meas. on $Be^7(n,\alpha)He^4$ 2=14111
particle exchange, strong absorpt. effect calc. 4=21776
particle higher symmetry barbaryon hypersuper-multiplet scheme 4=19381
particle systems with hypercharge Y = O, symm. 3=556
particles, self-consist. bound state, equiv. approach 4=3304
perturbation-theoretical integral representations, fundamental props. 2=20279
photon Green function 4=867
pion—nucleon processes above first max. 2=11984
pion, nucleon, spinorial, vectorial fields 2=11872
π + N, complex singularities in production amplitudes 4=19553
π—N and ρ—N, S-matrix theory, scatt. and production amplitudes 3=562
π—π, peripheral, between high-energy nucleons 1=16868
pole motion as a broken resonance multiplet approaches degeneracy 4=19424
pole trajectories with unstable neutral scalar particles 4=19425
rel. to potential scattering model 3=12413
production amplitudes at high energies, Regge pole-like terms 4=845
p—N and p—π, energy losses 3=17274
pseudoscalar mesons resonant scatt., bootstrap calc. 4=25030
pseudoscalar mesons scatt., rel. to SU_n symm. 4=817
quartz, triality and unitary symm. schemes 4=24983

Flow—contd
laminar, rectangular duct forced convection 0=6984
laminar, from rotating sphere, heat transfer 0=6975
laminar, in shock-tube boundary layers, transition 2=9302
laminar, round sphere, appl. of spherical means theorem 1=9370
laminar, stability, effect of flexible wall 2=7175
laminar, stationary, in nearly circular region 1=15796
laminar, of stratified fluid, stability 3=21294
laminar, with suction, boundary-layer flow 2=4989
laminar, total enthalpy change, heat cond. and viscosity dependence 0=221
laminar, through tube, solute dispersion 2=19547
laminar, viscous fluid, past flat plate normal to stream 2=9236
linear fluent material, past fixed sphere 0=16676
local velocity profile in boundary layer near non-uniformly heated plate 3=11755
lubricating greases in plunger viscometer 0=14577
macromolecules, laminar, rel. to light scattering, flexible necklace model 4=14140
macromolecules, light scatt., depolarization 3=14165
macromolecules, light scatt., interference factor 3=14164
macromolecules, light scatt., two-particle correl. 3=14163
magneto-fluid dynamic, steady, problems 1=5556
magneto-fluid mechanic channels, laminar to turbulent transition 1=5551
magnetohydrodynamic, annular channel entry 2=20124
magnetohydrodynamic, axially symmetric 4=11783
magnetohydrodynamic, through ducts of variable cross-section 1=9675
magnetohydrodynamic, effect of viscosity and elec. cond. 2=5456
magnetohydrodynamic, round flat vanes, normal and parallel to field 3=21962
magnetohydrodynamic, with heat addition, one dimensional 4=5785
magnetohydrodynamic hypersonic 1=5575
magnetohydrodynamic, at low cond. 3=2103
magnetohydrodynamic, plane channel, incompressible liquid 4=11781
magnetohydrodynamic, due to rotating disk 3=479
magnetohydrodynamic, past a rotating magnetized sphere 3=14570
magnetohydrodynamic, past thin wave-shaped plate 3=14749
magnetohydrodynamic, between two rotating cylinders, stability 2=17936
magnetohydrodynamic, weakly dissipative fluid, finite conductivity, shock conditions 3=18893
magnetohydrodynamics, temp. instability 3=9918
many-component fluids with antisymmetric press. tensor, cross effects 4=21072
mass transfer between moving interface and boundary layer flow, for low Sc 4=16071
between moving cylinders, conformal mapping 1=2732
moving layers, with dispersed solid material, heat exchange eqns. 3=11967
multiphase, through porous media, rel. to surface discontinuity 1=15823
multiple fluid, through porous media, analysis 1=15833
Navier-Stokes eqn., linearized, complete soln. 3=23836
Navier-Stokes eqns., convergence of numerical solns. 2=9235
Navier-Stokes eqns., incompressible Lagrangian form, selected solns. 2=24016
Navier—Stokes equations, initial value problem 3=18776
Navier-Stokes eqns., numerical soln. for steady viscous axi-symmetric flow 2=13308
Navier-Stokes eqns. for two-dimensional cavity 2=1107
near-equilibrium, quasi-one-dimensional 4=18137-8
nonlinear viscous flow, axisymm. solns. 3=5408
non-Newtonian, boundary layer 3=23832
non-Newtonian, calc. from expts. 3=3788
non-Newtonian fluid, laminar flow through annulus with porous walls 1=18365
non-Newtonian fluid, between oscillating plates 3=9425
non-Newtonian fluid in porous channels 3=7182
non-Newtonian fluid, between rotating cylinders, with suction and injection 3=16589

Flow—contd
non-Newtonian fluid, secondary flow, between 2 rotating concentric spheres 3=16590
non-Newtonian fluid, superprobability of steady axi-symmetrical flow 1=15789
non-Newtonian fluids, Couette and Poiseuille 1=15790
non-Newtonian fluids, disturbance growth, stability theorem 0=19047
non-Newtonian fluids, around infinite plate, rotatory oscillations 0=14602
non-Newtonian fluids, over rotating plane lamina 0=8615-6
non-Newtonian fluids, rel. to second law of thermodynamics 3=11769
non-Newtonian fluids, second law of thermodyn., appl. 2=9244
non-Newtonian, generalized Reynolds no. 4=135
non-Newtonian, superposability 2=4985
non-Newtonian, variational theorems 1=112
non-Newtonian, visco-elast. and visco-inelast., near stagnation pt. 2=11333
between nonparallel planes, viscous incompress. fluid., energy eqn. 1=6832
non-uniform, skin friction in pipes, convective heat transfer correl. 0=16914
nozzles, frictional and heat transfer effects 1=15803
in nozzles, sub- to supersonic transitions, evolutionality conditions 1=18444
in nozzles, sub- to supersonic transitions, evolutionality conditions 2=21928
in nuclear reactor channels, theory 4=17219
Nusselt number, rel. to Reynolds number 0=19475
Onsager's reciprocity relations for strongly coupled systems 4=96
orientation of Al flakes 0=10360
orifices and nozzles, discharge coeff., compressibility depend. 0=6757
Oseen's eqn., soln. by generalized Green's formula 4=29584
oseen flow past elliptic cylinder in uniform magnetic field 1=16525
between parallel plates, heat transfer 2=7437
parallel, stability theory 2=21879
perfect fluid, finite Hankel transform 0=6741
perfect fluid around two moving bodies 4=29583
pipes, turbulent, heat and mass transfer 3=5411
past Pitot tube at low Reynolds number 2=13308, 13309
plane, undefined, uniform, velocity distrib. geometrical notes 3=7177
plasma, almost one-dim., magnetohydrodyn. 3=7514
plasma, quasi-one-dim., magnetohydrodyn. 3=21791
plasma, transverse to mag. field, short-circuiting 2=17823
plastic, viscous and Bingham bodies, comparison 0=3161
over plates, semi-inf., near free-surface of stream 1=113
Poiseuille, of conducting fluid, in mag. field, stability 0=9174
Poiseuille, plane, periodic perturbations 2=13311
Poiseuille, thermodynamics 0=3694
Poiseuille, transition, simple model 3=7179
Poiseuille, in tube, theory 3=23834
Poiseuille's law in variable system, application conditions 3=7178
polymer melts, at high shear rates 4=28974
polymers, extension of Eyring-Ree theory 1=18367
in porous material vertical column, unsteady drainage 3=7191
porous materials, Davey's law, correct form 3=14127-8
porous media, equations 0=4739
porous media, studies with Christiansen filter 0=3494
porous media, viscous flow, three-point correl. 3=1670
porous medium, anisotropic, permeability 3=7193
in porous medium, vel. of fluid mass imbedded in another fluid 4=125
porous model studies, optical scanning of concentrations 0=10635
porous wall, sound field effect 3=23833
potential flow, through cubical array of spheres 0=12403
potential, fluids, resistance due to spheroid motion 1=122
through powder packs, Knudsen and Poiseuille flow, use in definition of "pore radii" 4=7685
powders, study using viscometer 4=5134
power-law fluid, with suction and injection 3=14110
power-law fluids, past accelerated plane wall 3=11756
power law fluids, boundary-layer eqns. 4=8138
Prandtl—Meyer flow, wave formation 1=6841

Flow—contd
pseudoplastic region, theory of flow curves 3=18198
pulsating, superposed on steady flow, in circular pipe 0=19055
pump, d.c. electromagnetic 1=5572
quartz sand, flow—stick transition 4=23538
rate-of-strain tensor invariants 0=14582
Rayleigh number, critical, variable viscosity effect 3=21297
Rayleigh problem and flow behind shock wave 2=20126
Rayleigh problem, 2nd-order effects 2=21873
Rayleigh's problem in magnetohydrodynamics 0=11024
Rayleigh-Taylor instability, variational principle 4=29587
from rectangular nozzle, near critical speeds 1=6838
Reiner–Rivlin fluid, at inlet of channel 4=18153
Reiner—Rivlin fluids in a mag. field 4=5767
relaxation of plane laminar flow 2=7183
resistance of axisymmetrical body in potential flow 4=29603
rheological, non-Newtonian fluids 1=11739
rotating cylinders, inviscid, non-rot.-symm. disturbances 3=1714
rotating fluid, hydraulic jump 4=18152
separation, review 2=4979
shear, boundary layer over flat plate 0=3498
shear, constant, past two circular cylinders 0=14590
shear, over flat plate, optimal coordinates 0=19058
shear layers, time-dependent, models 2=19522
shear, in weak turbulent fields 1=15922
in shock tubes, hot flow length and testing time, viscosity effect 4=14263
simple fluid, incompress., steady extension 2=15547
around slender bodies, gyration field applic. 1=15795
sound-generating, vortex whistle 3=18916
Spalding function, extensive calc. 3=11970
around spherical obstacle 0=8629
spiral, stability criterion 3=9416
stability, flow between coaxial cylinders 0=4995-6
stability of plane parallel flows 4=29582
stability of potential flow 4=29590
stability, shear layer between parallel streams 4=124
stability of superposed fluids 4=29579
stability theory, nonlinear problems 2=21877
stability of viscous flow between rotating cylinders 4=29585
stability of viscous flow between rotating cylinders in mag. field 1=16527
stagnation flow, subsonic, thin-aerofoil theory 4=215
stagnation point, integral equation 2=13304
steady-flow processes, thermodynamic relationships 0=3691
steady magnetohydrodynamic eqns., solutions 1=16510
steady open channel flow, one dimensional analysis 1=119
steady and unsteady, past thin aerofoil, integral representation 4=11028
Stokes flow of sphere 3=9424
Stokes flow, about spindle, viscous incompressible fluid 0=19054
Stokes paradox 3=18777
Stokes, single-sphere heat and mass transfer 2=9423
Stokesian fluid, Couette flow, stability 1=4305
stratified fluid, by method of characteristics 3=9411
stratified fluids, gravity waves 4=29599
streamline curvature modulus theorem 4=14102
stream lines in Bernard convection cells 0=918
streamlines rel. to shock surface 1=15936
stream-lines, soln. of eqn. 3=11661
superfluid systems of fermions 1=5235
superposability and self-superposability 3=14098
superposability rel. to streamline pattern 4=2631
superposable, axially symmetric 1=6829
superposable flows, axially symmetric 0=4992
supersonic, past bodies of revolution, singularities 3=18778
supersonic, heat transfer and skin friction 4=2867
supersonic shear flow, boundary layer 3=21298
suspension, momentum, mechanical energy balance eqns. 3=101
suspensions, effect of presence of large sphere 4=5128
suspensions of rigid spheres, Poiseuille, rel. to particle rotation 2=21887
Taylor instability between liquid boundaries 0=67

Flow—contd
temperature distrib., approx. calc. by finite differences 4=5427
thermally stratified fluid under gravity, stability 4=24134
thermoacoustic streaming near heated cylinder 0=8755
in thermosphere, light elements vertically 2=2472
3-dimensional, magnetohydrodynamic 3=14750
tube, diffusion eqns., conc. parameters 2=9264
turbo-flow dynamics 0=19074
turbulence in porous-wall pipe 3=3784
turbulent boundary in compressible fluid 4=29588
turbulent boundary layer, "law of the wall" 4=29591
turbulent boundary layers, temp. rel. to velocity 2=15533
turbulent diffusion from point source with boundary layer flow, meas. 4=11149
turbulent incompressible, intrinsic eqns. 3=115
turbulent, intermittency 4=29592
turbulent mass transfer near fluid interface 1=18371
turbulent, mathematical model 2=15554
turbulent, particle vertical distrib. 2=19472
turbulent, patterns in wall-adjacent region 0=928
turbulent, shear flow, velocity corrections 4=16072
turbulent, skin-friction coeff. Spalding function 2=15770
turbulent, static press. det. 2=9240
turbulent stream, pressure and temperature correlation 0=19069
turbulent, in tubes, bulk velocity and temp. meas. 1=15799
in turbulent vortex, analysis 1=18375
two-component mixtures 0=6752
two-cylinder, linear theory 2=21877
two-dimensional incompressible motion, general theory 2=15548
in two-dimensional jet of pseudo-plastic fluid 2=21882
two-dimensional pot. flow fields, relation to stream line curvature 3=16580
two-dimensional, shock front, numerical method 2=11401
two-phase, H, N and O, idealized solns. 4=11152
two-phase media, X-ray study 2=19529
unmixing demonstration 0=6751
unsteady, one-dimensional, transverse mag. field effects 2=7180
unsteady, potential fluid flow, in presence of cavity 0=19048
valve, high-speed, for deLaval nozzle 2=1178
viscoelastic fluid, axially-symmetric and 2-dimensional stagnation point flow 3=11770
viscoelastic fluid, natural time 4=29589
viscoelastic, in tube, axial stress at wall 3=11772
viscoelastic, thro' tube, dimensionless groups 3=11771
viscous, past convex corner 0=19186
viscous electrically conducting fluid 1=9677
viscous fluid, analogy with extension and flexure of plates 0=8603
viscous fluid, rel. to bubble expansion 2=9251
viscous fluid in elastic tube 3=5404
viscous fluid, in initial section of plane channel, mag. field present, effect of elec. cond. anisotropy 4=16640
viscous fluid, under periodic force, between parl. planes and in pipe 0=6744
viscous fluid, between rotating disks 2=4990
viscous fluid, surfaces, in general relativity 3=14098
viscous fluid under tangential stress and gravity, stability 4=14099
viscous fluid through tapered tube 4=29586
viscous, force const. on cylindrical particle 0=14583-4
viscous force on plane due to current fluctuation 2=1112
viscous, Frenkel diffusion theory 3=23329
viscous, between horiz. concentric cylinders 0=8627
viscous, in long tubes, end correction 2=19516
viscous in magnetic field, vorticity and circulation 1=5537
viscous, past a porous flat plate 2=2674
viscous, between rotating cylinders, stability 2=15538
viscous, past rotationally oscillating cylinder 2=1110
viscous, rubbers 0=10266-9
viscous, round sphere 0=6745
viscous, thermodynamic theory 3=1658
viscous, var. as exp. temp., soln. of equn. interims of simple tabular functions 4=8020
visualization, colour schlieren photography 3=271
visualization techniques, review 2=17414
von Kármán wake of rectangular cylinder 4=29580
vortex, normal to a flat surface, calc., var. Reynold's numbers 4=8141

Flow—contd
- vortex street development, numerical soln. 3=18782
- wake of thin flat plate, velo. distrib. meas. 4=24141
- wakes, swirling, linearized 2=19515
- wall-effect in 2-dimension Stokes flow 1=10773
- wall turbulence, spectral energy budget 4=11154
- wedge, heat and mass transfer at surface 3=5409
- wedge, with small mass transfer rates 3=11752
- past wedges, soln. of $y''' + yy'' + D(1-y'^2) = O$ 1=2774

heat exchange and gas dynamics, conference 4=8230
heat transfer, high thermal conductivity, from plane solid 0=5053
high-velocity, two-phase turbulent jet, stagnation temp. 4=14127
hydrogen-air and CO_2-air systems through porous wall, heat and mass transfer 4=18447
hypersonic blunt body problem 2=2749
hypersonic, dissociated, local atom concns. 3=9487
hypersonic, sharp leading edge problem 2=2742
ideal gas of low elec. conductivity past thin profile 1=16540
ideal monatomic, eqn. of motion, invariant transformation 4=8232
imaging by electron beam 0=950
ionized gas flow 4=11223
ionized gas through straight channels, m.h.d. 4=11776
ionized, internal, allowing for recombination 4=11223
ionized, meas. in flames 1=16157
isoline coincidences 4=29653
jets, air, supersonic, into water 3=7226
jets, gas, perfectly conducting inviscid, in magnetic field 1=10772
jets, non-isothermal, mixing mechanism 2=15624
kinetic model for high velocity ratio near free-mol. flow 2=17511
from Knudsen cell, diffusional contribution 2=19607
Knudsen number, relevant system dimension 3=21422
laminar, axisymm. jet, approx. soln. 2=11396
laminar, boundary layer, solution of eqns. 0=14673
laminar boundary past plate in mag. field with ionized injection 4=19182
laminar over cooled flat plate, rel. to condensation 1=18446
laminar, by mixing gases, numerical calc. 4=14196
laminar jet mixing in radiation gasdynamics 4=218
laminar, momentum transfer 0=19175
laminar, turbulent boundary layers, methods of soln. 2=15623
Laval tube flow 1=12908
leading edge of shock-induced boundary layer 3=1753
linearized, over wedge in nonequilibrium stream 2=21929
and liquids, together, pressure drop, var. with orientation 4=5130
Mach number, rel. to mean free path 2=5067
magnetic annular shock tube 0=1195
magneto-aerodynamics, exact solutions 1=5557
magnetogasdynamic, between coaxial cylinders with potential between 3=17044
magnetogasdynamic flow, one-dimensional, with wall friction 3=19431
magnetogasdynamic linearized theory 1=12005
magnetogasdynamic, quasi-hyperbolic 1=10778
magnetogasdynamic, 3-dimensional solns. 2=16007
magnetogasdynamic, transcrit. and hypercrit. 2=3147
magnetogasdynamical, substitutional principle 3=14748
magnetohydrodynamic, Faraday and Hall-type channels one-dimensional analysis 3=14752
magnetohydrodynamic generator, Hall effect, one-dimensional analysis 3=14760
magnetohydrodynamic Hall effect generator, one dimensional theory 3=17045
magnetohydrodynamic, inversion effects 2=5461
magnetohydrodynamic, one-dimensional, with heat transfer 4=16645

Flow—contd
gases—contd
magnetohydrodynamic, plane and axisymmetric stationary gas flows 3=19434
magnetohydrodynamic, with radiation 3=19425
magnetohydrodynamic, rotational, reciprocal relations 4=24818
magnetohydrodynamic, round thin profiles 3=19426
magnetohydrodynamic, with shock waves 3=12305
mass transfer at boundary layers, thermal diffusion effects 4=5221
Maxwellian molecules, shear and heat flow 0=14685
melting body near crit. point in gas flow 2=22102
methane, thermal transpiration at high temps. and 3×10^{-3} – 2.5 mm Hg press. 4=5224
methane, turbulent wakes 3=164
mixtures, separation effect, laminar flow in cylindrical pipe 0=19178
molecular, beamformation, directivity 3=2679
molecular, conductance of systems 0=19173
molecular, free, heat transfer 0=203
molecular flow in isothermal enclosure 3=14201
molecular, influence on adsorption and absorption 0=2186
molecular, leaking from mass spectrometer 2=11397
molecular, nearly free, through an orifice 0=14675
molecular, passage through ducts of arbitrary form 3=18852
molecular, through porous partition 0=14686
molecular, through short ducts 2=5033
molecular, through short ducts, effect of "rougher-than-rough" surfaces 4=11222
molecular, through tubes, diffuse wall reflection 3=16648
molecular, through various pipes, Monte Carlo calc. 0=12431
molecules along surface of pore walls in porous media 2=7238
near-sonic, through nozzle 0=6826
noise generation in turbulent flows, diffraction theory 4=5299
nonequilibrium, entropy changes 4=217
nonequilibrium, vortex sheet instability 3=1715
non-homogeneous, spherical particle motion 2=2768
non-linear theory of waves 0=10595
non-viscous, non-conducting perfect, hypersonic, past object with radius a pwr of distance 4=24255
in nuclear reactor, rel. to cooling 1=19568
nuclear reactors, pebble-bed, turbulence 2=16449
oil vapours in piping, low conductance 3=16647
one-dimensional, with shock discontinuities 1=6882
one-dimensional unsteady motion 1=15912
through orifice, density field 1=5290
orifice flow, free molecule density field 4=16135
oxygen + inert gas, boundary layer flow with combustion 1=4369
parallel, stream mixing 0=10684
perfect gas, one-dimensional, viscous 0=8681
in permeable solids 1=2513
between permeable surfaces, friction, rarefaction effect 4=29651
in pipe, turbulent to laminar flow transition 2=7237
along pipes, isothermal 3=18838
piston-driven, unsteady flow and shock waves 1=8148
near plane wall, velocity profile, slip velocity 1=18445
plasma, in curved mag. field 1=18848
in plasma generator nozzle, axial magnetic field effect 1=16346
plasma, through mag. barrier 1=18847
plane Poiseuille 2=2740
near plane wall, velocity profile, slip velocity 2=1172
plasma in homopolar device, stationary flow 2=5357
plasma, hydromagnetic stability 0=7126, 9035
polyatomic gas thro. normal shock wave 3=21424
polytropic, behind shock waves 2=21932
through porous ceramic 1=18447
through porous materials, air, rarified, from free mol. to viscous flow 3=9483
porous materials, flow resistance 3=23983
porous materials, mol. to viscous transition 4=5218
through porous media, in region between molecular and viscous condition 1=10530
in porous pipes, with injection and suction 1=4367

Flow—contd
gases—contd
in porous, pressure distrib. 2=9297
quantity meas., using temp. difference 4=21162
quasi-stationary flow from variable-volume cylinder 1=15927
radial flow in crossed fields, conducting gas 3=12306
radiation magnetogasdynamics, plane Couette flow 4=18816
Rank effect rel. to other props. 2=17493
rarefied gas, continuum eqns. 1=5295
rarefied gas dynamics, dispersion relations 3=7237
rarefied gas between two parallel plates, analysis 4=5217
rarefied, heat transfer, moment method 2=7426
rarefied, Knudsen conductance, rel. to specular reflection 2=5035
rarefied, momentum transfer, influence of pressure history 0=14670
rarefied, from point source into vacuum 2=1173
rarefied, slip flow, second order, analysis 4=21167
rarefied, through tubes with diaphragm ends 3=9502
rarefied, between two parallel plates 2=2741
rarefied, unsteady, perturbations, based on Grad's approx. 2=2736
Rayleigh problem, linearized, kinetic theory analysis 4=16136
over reactive surface, effect on equilib. 3=21423
regulation by bellows valve, high pressure type 4=16134
regulator for gas flows down to 0·01 cc min^{-1} 1=18489
relativistic, from acute-angled container 0=93
relativistic, steady state 0=94
resistance to motion of sphere with dimensions ~ m.f.p., approx. calc. 4=220
rockets, hypersonic, ionized shock layer 2=4878
rotational, for constant velocity along streamlines 2=21927
self-similar motion of ideal gas 1=15926
self-similar motion of ultrarelativistic gas 1=6875
self-similar motion of ultra-relativistic gas 1=10528
self-similar unsteady flows, piston and Cauchy's problems 1=6881
shadow apparatus, diffraction phenomena errors 2=15622, 17491
shear, gas mols. interact. with central arbitrary force 3=9498
behind shock front, vibrational relax. 2=19599
shock layer of re-entering rocket, electron density 2=2755
shock relaxation in flows carrying particles 4=18338
shock-tube boundary flow, tracer study 3=7285
shock tube, 1 in. diam., hot, duration 2=19600
in shock tube, theory and meas. 2=19602
behind shock wave, dissociation and recombination 3=11857
shock wave interaction with expansion waves 4=27249
behind shock waves in conducting gases 1=166
shock waves, in 3-dimens. flow, gradients behind shock 4=29692
shocks, flows behind, existence and uniqueness 2=11405
skin friction decrease by gas injection 3=23919
past slender bodies, unsteady linearized relaxing flow 4=8228
slip coeff. evaluation 3=18841
slip-flow, appl. of Boltzmann eqn. 3=3826
solar corpuscles, in magnetic tubes 2=967
with solid particles 4=29656
sonic flow, past symmetrical profiles, "weak" solution 1=2776
past spherical and cylindrical obstacles, trapping of aerosol particles 4=14193
split nozzle mixing, turning jets 2=7239
static electrification, review 2=19873
steady flow; kinetic theory 2=2735
steady, in plane channel, in transverse electric and magnetic fields 4=3117
steady state, atomic concentration space–time variation 3=25068-9
stability of idealized atmosphere 0=8679-80
stopcock, variable two-way 3=16587
streak interferometry examination 0=3642
stream, water drop condensate velocity 2=9294
stream gas dynamics 3=18837
sublimation of solid near critical pt. 2=15813

Flow—contd
gases—contd
subsonic, normal shock wave at near-critical Mach number 0=19185
subsonic, potential flow, solution of eqns., rapidly convergent method 0=6823-4
suppression of noise generated by high-pressure blowoffs 2=13419
for surface meas., specific, powders and porous materials 4=7696
suspension of graphite in N_2, in $^1/_2$ in. tube, press. drop 4=27219
T-tube, behind shockfront 4=18831
temperature and Mach number meas. device, 0°-6000°C 3=1718
thermal transpiration, calc. 4=2717
thermal transpiration, low pressure 2=1175
thermo-molecular, pump and pump throttling vacuum appls. 4=8265
transition from streamline to turbulent flow, relaxation effects 4=5219
transonic, expansion procedures and similarity laws 1=6885
transonic, linearlized theory 1=6884
transonic, plane homogeneous, conservation theorems 1=15917
trans-sonic region at high press., relationships 2=5042
travelling waves 1=6880
tube, free-molecules, velo. profile 4=29655
in tube with heat source 3=18933
tube, narrow, with Langmuir adsorption 2=9296
tubes, short, slow viscous flow of rarefied gas 4=11221
turbulence, boundary layer transition by spherical roughness 1=15918
turbulence, grid-produced, final-stage decay 4=5226
tubulent airflow, wall pr. correlations 1=8147
turbulent boundary layer at a plate 1=4368
turbulent boundary layer problem 0=3553
turbulent, with mass transfer, calc. of transport rates by reference states using injection friction 4=5220
turbulent mixing mechanism 2=9293
turbulent, in pipe, dispersion of gas 4=213
turbulent, with strongly varying density 4=212
2-dimensional, in aligned mag. field 3=21963
two-dimens., cond., in trans. mag. field, linearized theory 2=17935
ultra-relativistic, one-dimens. adiabatic flow 2=1174
uniform high-speed flow past wedge 4=27205
unstable, internal relaxation or zero energy reactions, shock wave 3=23921
unsteady in Laval nozzles 0=14676
unsteady, sound generation, review 2=21968
upper atmosphere, free-molecule field of moving body 2=4621
into vacuum, generation of waves 2=5039, 11394
valve, fast acting 2=1179
valve, quick-acting, for bubble chambers 2=3228
value for 3000 atm pressure 2=2690
vaporization in U-tubes 1=4512
velocity meas. by ion tracer method 1=15921
velocity profile development in entrance of right cylinder with slip at walls 4=5223
vertical flow, concentration and vel. formulae 3=23920
viscous, axi-symmetric, past slender bodies of revolution 2=21926
viscous compressible gas, 1-dimens. flow, stability 1=4366
viscous, compressible, motion adjacent to sliding plate 1=15925
viscous flow with heat transfer 3=24122
viscous gas, efflux into vacuum 4=2716
viscous, in gravit. field, spherically symm. 4=27204
viscous, momentum transfer 2=15635
viscous, momentum transfer 3=5463
visualization using low-density plasma streams. 3=157
vortex tube 1=163
water, during vaporization in U-tubes 1=4512
water—vapour mixture in heated pipe, circulation parameters 4=14456
water vapour through porous cast Al 1=18442
water vapour, in porous materials 3=11819

Flow—contd
gases—contd
wave flow, on spherical earth, finite-amp, 3-dimens. 0=6830
wave refraction, at gas–gas interface 0=12456
past wedge, at sonic velocities 1=15916
through wire meshes, resistance, calc. 3=7225
Ar, plasma jet, rel. to energy content 1=18893
Ar, shock waves rel. to absorption 2=9307
Ar, thermal transpiration at high temps. and $3 \times 10^{-3} - 2.5$ mm Hg press. 4=5224
CO_2, through nozzle 1=15928
CO_2, through porous Pyrex, at few mm Hg 1=10530
D_2 in liq. Ar, i.r. induced absorpt. in dil solns. 4=27177
H ions from duoplasmatron source 2=11723
H_2, through porous Pyrex, at few mm Hg 1=10530
H_2, thermal transpiration at high temps. and 3×10^{-3}–2.5 mm Hg press. 4=5224
H_2, in tube or annular space, heat transfer 1=6973
He, thermal transpiration, 10^{-8}-20 torr 3=18844
He-tracing of flow patterns 3=14198
Hg vapour, effusion from Knudsen cells 3=16642
Kr, thermal transpiration at high temps. and $3 \times 10^{-3} - 2.5$ mm Hg press. 4=5224
Ne, thermal transpiration at high temps. and $3 \times 10^{-3} - 2.5$ mm Hg press. 4=5224
O_2, effect in microwave (3 cm) breakdown 3=9516
Sn through orifices, unrecognized characteristics 3=11814
UF_6, through nozzle 1=15928
Zn vapour through Pyrex tubing, anomalous 3=14195
liquids

micro, theory 4=24132
miscible fluids in porous medium, stability of interface 2=21874
mixtures, binary, Lennard-Jones pseudo-single-component potential 2=19512
mixtures, light scattering, critical opalescence, theory 4=8526
mixtures, "one fluid" theory, var. property 4=14067
moderately dense rigid-sphere, kinetic theory 0=18967-8
molecular distribution functions involving two terms 0=10651
molecular friction, acoustic continuum model 1=18390
molecular theory rel. to acentric factor 2=2677
moving, measurements, thermistors appl. 2=2689
multicomponent mixtures, pseudo pair potential 2=13323
multicomponent mixtures, strong discontinuity surf. conditions 2=17411
multicomponent systems, statistical theory, double-index distrib. functions 4=21070
Navier-Stokes eqns., convergence of numerical solns. 2=9235
Nernst's principle, validity 2=4977
neutron and X-ray scatt., law of corresponding states 0=14650
nonequilibrium distribution functions 0=10650
nonlinearity parameter for acoustics 0=10646
non-Newtonian, Couette and Poiseuille flow 1=15790
non-Newtonian, flow, rel. to second law of thermodynamics 3=11769
non-Newtonian heat-generating, heat transfer in laminar flow 4=14419
non-Newtonian, high pres. viscometer 2=15539
non-Newtonian, rheological flow 1=11739
non-Newtonian, stability theorem 3=14097
nonpolar, theory of dielec. const. 3=16575
nonuniform, long-range correlations 1=9345
non-uniform multi-component systems, free energy and distrib. function 0=16630
nonuniform, statistical thermodynamics 3=7135
nuclear mag. resonance, fluids, effect of molec. orientation in elec. field 3=14188
nuclear spin relaxation, momentum dependent interaction 4=8256
one-dimensional. hole theory and quasi-chemical approximation 4=16070
packed beds, pressure-drop eqn. 3=9419
pair correlation function, approx. calc. 0=14647
pair correlation function, thermodynamic theory 1=8064
pair correlation functions, mixed, perturbation calculation 4=14076
pair distribution function, exact integral eqn. 1=2749
pair distrib. in rigid-sphere system, by particle-scaling method 3=3785
pair distribution near walls, asymptotic value 0=3510
Percus—Yevick integral eqn., soln. 3=14138
perfect, with infinite card., shock waves 4=8310
physical props. of isotopically substituted classical fluids 1=1735
polar, in elec. fields, high resolution spectra, calc. 4=6650

Fluids—contd
porous media, magnetic spin pumping 0=89
in porous medium, stability 1=18346
potential flow, resistance due to spheroid motion 1=122
power-law flow past accelerated plane wall 3=11756
power law fluids, boundary-layer flow eqns. 4=8138
pressure—entropy diagram, complement to Mollier diagram 4=8532
propagation phenomena in conducting compressible fluid 4=16631
pseudo-plastic, incompressible, two-dimens. jet 2=21882
quantum, cell model 4=14134
radial distrib. function, from Born—Green integral eqn. 0=14622
radial distrib. funct., Kirkwood integral eqn., virial expansion 2=11324
radial distrib. function, perturb. correction 4=27135
radial distrib. functions from integral eqns. and Monte Carlo 3=1656
radial distrib. functions for long-range forces 3=14137
rate processes, structural and internal state variables 2=1133
Rayleigh-Taylor instability, variational principle 4=29587
Reiner—Rivlin, flow at inlet of channel 4=18153
relativistic mechanics 4=27136
relativity, general, discontinuities, appl. 3=23755
rigid sphere, kinetic theory 0=6698
rigid sphere, transport eqn. for binary mixtures 0=3469
rigid spheres with square-well attraction, kinetic theory 2=1116
of rigid spherical molecules, Boltzmann equation, generalized 1=8060
rotating, energy transfer by wave reflection 3=11758
rotating flows of von Kármón and Bödewadt 4=18141
rotating polytropes 4=2633
rotating polytropes 4=29366
rotating, steady plane fronts 3=16583
scaled particle theory 0=19095
self-diffusion coeffs., rel. to quantum equilibrium props. 4=21114
shock equations, in perfect fluid, correction terms 0=10730
simple fluids, critical region rel. to correl. functions 4=24441
spherical system, relativistic analogue of Newtonian result 1=15624
stability of superposed fluids 4=29579
stability theory, nonlinear, inviscid shear layers 4=18132
stability of two superposed fluids, effects of surface tension and viscosity 1=15779
standing surface waves, 3-dimensional 2=1122
statistical equilibrium, functional expansions 4=21052
statistical mechanics of nonspherical molecules 4=5123
statistical theory of dielec. fluids 2=2679
stratified, appl. in meteorology 3=5405
stratified waves, theory, including gravity and rotation effects 3=21295
structure theory, significant, for rigid sphere system 4=118
super-cavitation profile, in presence of free surface 4=11153
superposability and self-superposability 3=14098
superposition approximation and fourth virial coeff. 1=10503
superpotential and supermatrix of heterogeneous ellipsoid 3=1595
theory, Baer, hole, disagreement with one-dimensional hard sphere fluid 4=18089
theory, classical 3=5417
theory of two- and one-dimensional rigid sphere fluids 1=5220
thermal agitation and turbulence 2=2678
thermal cond., auto-correlation expression 0=14545
thermal convection, rigid boundary problem 4=21338
thermodynamic props., rel. to molec. distrib. functions 4=20125
thermodynamic and radial distribution function in terms of potential energy distribution 4=5122
time-relaxed probab. densities and correl. functions for moderately dense fluids 4=27113
transfer (heat, mass, momentum) near boundary, mixing model 3=14104

Fluids—contd
- transport coefficients 1=6804
- transport by diffusion and sedimentation 3=9377
- transport processes in polyatomic fluids, theory 2=15537
- transport, statistical mechanics 0=14548
- transport in two-component square-well fluid 4=5124
- turbulence boundary layer, velocity profile 2=21881
- turbulence, decaying homogeneous 0=8626
- turbulence, isotropic, energy transfer 2=11327
- turbulence, isotropic, energy transfer 3=5413
- turbulence, statistical theory 2=13302
- turbulent, containing foreign bodies, acoustic radiation 0=8684
- turbulent, energy transfer and decay 2=1113
- turbulent motion, Eulerian–Lagrangian problem 2=11326
- turbulent transport of scalar props. 2=13313
- unsteady particle motion, rel. to conveyance problems 4=2634
- virial coeffs., and square-well potential, classical theory 4=21088
- viscoelastic, axially-symmetric flow 3=11770
- viscoelastic constants, measurement 4=18133
- viscoelastic, natural time 4=29589
- viscoelastic, 3-constant Oldroyd model 2=21875
- viscous, flow between rotating disks 2=4990
- viscous flow past rotationally oscillating cylinder 2=1110
- viscous media, paramag. relaxation time 3=1713
- viscous, slow motion, analogy with extension and flexure of plates 0=8603
- viscous, thermally conducting, propag. of spherical waves 4=278
- vortex filament, progressive deformation 3=11759
- wave propagation, method of characteristics 2=1114
- waves, effect on particle oscillations 2=13317
- waves, hydromagnetic, in inhomog. fields 3=17034
- weak wave propag. in, in radiation field 1=1733

Fluorescence
- See Luminescence.

Fluorescent screens
- See Luminescent devices.

Fluorine
- air, high-temp. ionization, effect of F_2 addition 2=3005
- aqueous ions, entropy 4=24202
- atom, $1s^22s2p^k$ configs., analytic self-consist. field functions 4=15273
- atomic mass, accuracy difficulties in mass-spectrographic det. 1=3523
- atomic wave-functions 2=8059
- atoms, aspherical scatt. factors in sp^3, sp^2 and sp valence state 4=26626
- atoms, collisions with inert gases, electron capture and loss 0=7079
- atoms, exchange polarization effects in h.f.s. 1=12238
- atoms of F^{19}, h.f.s., unrestricted Hartree–Fock calc. 3=12760
- atoms and F^- ions wave functions and correlation energies 4=3789
- atoms, microwave Zeeman spectrum 1=11067
- atoms, μ^--meson absorption meas. 2=13887
- atoms, polarizability, dipole, calc. 0=9736
- chemical reaction with NO, dilute diffusion flame study 0=16374
- chemical reactions, atomic, gaseous, substitution in CF_4 3=21005
- combustion with H_2, flat-flame burner 1=12676
- crystal struct., atomic, β, 50°K 4=23441
- desorption from Mo, and work function change 4=13691
- e.s.r. of centre in X-irrad. BeO 4=26396
- electron affinity 0=2783, 20741
- heats of reaction, const. pressure flame calorimetry 0=7007
- ionization potential 0=16973
- ionization potential–refractivity relation 0=2321
- liquid, miscibility with ozone and oxygen 2=21904
- liquid, thermodynamic and physical props., calc. by significant structure theory 4=8166
- molecule, mag. antishielding const. of F, meas. 4=12519
- molecule, mag. shielding of F^{19} nucleus 2=20903
- μ^- polarization, search 3=15314
- n.m.r. in acidic fluoride solns., HF, HF_2 - shifts 4=23067

Fluorine—contd
- n.m.r. in CaF_2 2=14849
- n.m.r. of F^{19} in $KMnF_3$, u.s. modulation 4=20614
- n.m.r. of F^{19} in KrF_4 4=20612
- n.m.r. of F^{19}, in XeF_4 4=20613
- n.m.r. in NH_4F solns., var. conc. 4=23067
- n.m.r. solids and solns. in alkali and alkali earth fluorides, shifts 4=23067
- polarization of fluorine nuclei in Teflon, rel. to microwave power and n.m.r. frequency 3=25580
- spectral line intensities, oscillation, in toroidal discharge with mag. field 4=14651
- X-ray yield, on electron bomb. 2=14697
- F^{19} in CeF_4, n.m.r. absorpt. line, mag. shielding transition 4=23068
- ions, F^{19}, energy loss in Ni, O_2 and nucleon emulsions 0=17051
- F^{19}, n.m.r. relaxation time in LiF 3=25584
- F^-, atomic polarizability and London force consts. 4=3790
- ions, F^-, atomic scatt. factor and charge distrib. radius 2=10857
- ion, F^-, electron affinity and stability calc. 4=9643
- F^-, electron photodetach. and atomic electron 2=12298
- F^- gaseous ion, absorption spectrum 3=12759
- F^-, ground-state wave-functions 1=13930
- ions, F^-, Hartree–Fock SCF wave-functions 2=515
- ions, F^-, quadrupole antishielding factor calc. 4=3791
- F^+, $1s^22s^23p^3nl$ config., coupling schemes calc. 4=1190
- $F^{+,2+}$, spectral presence from multiply-charged source 4=27584
- ion, F VII, oscillator strengths calc. 4=6476
- F_2, anomalous dissociation energy 2=14318
- β-F_2, crystal lattice structure 4=26648
- F_2 crystals, librational motion 3=745
- molecules, F_2 and F_2^+, energy levels 0=17844
- F_2 mol., far u.v. spectrum 2=14284
- F_2 in sat. hydrocarbon phosphorescence, 77°K 4=20499
- F_2, vibrational relax. times 2=8084

Fluorine compounds
- complex fluorides, luminescence 0=8017
- ferrites, spinel, charge compensated, mag. props. crystal structure 4=13229
- fluorides, acidic, solns., n.m.r. of F and HF, HF_2 shifts 4=23067
- fluorides, iron-series, h.f.s. in magnetic resonances 3=15955
- fluorides, Pr^{3+} doped, i.r. quantum counteraction 4=7132
- fluorides, spectra, u.v. absorpt., oscillator strength for first band 4=7131
- fluorite crystals, alpha colour centres 1=10014
- fluorite, Raman spectrum, temp. dependence 2=14690
- fluorocarbons, F coupling consts., relative signs 3=15377
- fluosilicates, nuclear orientation 1=14153
- hexafluoride mols., interatomic distances, mean-square ampl. 4=6592
- Invar alloys, K-edge meas., X-ray study 2=17030
- molecular complex ions, induced dipole moments 4=30443
- nuclear magnetic resonance, F^{19} chemical shift 3=25590
- nuclear spin–spin coupling consts., temp. dependence 4=3907
- transition metal trifluorides, crystalline distortion 1=20037
- ClO_3F, C_p/C_v, from vel. of sound 0=105
- $F^{35,37}ClCO$, microwave spectrum analysis 2=18467
- FCN molecular vibr., bond lengths, dipole moment, of N^{14}, n.q.r. 4=9735
- F_2CO, microwave spectrum and vibr. states 3=12836
- F_2DC-CD_2F spectrum, rot., 7-30 kMc/s 4=25672
- FH, use in etching depressions in glass and quartz plates 4=23985
- F_2HC–CDHF, spectrum, 7-25 kMc/s, Stark modulation 3=17593
- $(FHF)^-$ ion, electron density in NH_4HF_2 0=8205
- FHF^- ion, wave-mechanical study of H bond 1=12295
- F_2O, microwave spectrum, structure and dipole moment 2=3737
- HF, electronic structure 0=7774-5

Foams
- See also Bubbles.
- acoustic wave propag. 4=8337
- antiforming agents, comparison 2=15168
- formation and stability 0=4747

Foams—contd
- formation, thinning and complementary pressure 2=17430
- frothy liquids, density meas. 0=6728
- kinetic stability, critical and equil. thickness 2=17431
- polystyrene, mechanical–acoustical behaviour 2=17523
- sound velocity and compressibility 2=2828
- stability, electrostatic repulsion 0=12420
- stability, mechanical, thermodynamic 4=24150
- urethane acoustic impedance and absorption 2=9357
- viscometer for, torsional vane, 0=14576

MgO, due to dislocation piling-up, at intersecting slip planes 0=17932
MgO, ductile-brittle transition 0=21145
MgO, microcracks, mechanism 0=21147
MgO monocrystals, effect of slip 1=5996
MgO monocrystals, Stroh-type cracks on bending 1=1342
MgO, neutron-irrad., fracture stress 4=10392
MgO, single crystals, rel. to plastic flow 0=21143
MgO, rel. to slip 3=6802
MgO, by thermal shock, nucleation 2=6753
$MnNi_3$, under bending stress rel. to disordered structure 3=6790
Mo, brittle fracture at stresses below yield point 4=13427
Mo, ductile and brittle 2=6752
Mo, high purity cast, cleavage 4=28967
Mo, after neutron-irradiation 1=20377
Mo single crystals, along {001} and {110} planes after cooling 4=13428
NaCl cleavage-surface, annealing effect 2=8746
NaCl, disk-shaped cleavage surface 1=14917
NaCl, ductile-brittle transition 0=21145
NaCl whiskers 1=14901
Nb, cleavage planes 1=20384
Nb, 1.4-300°K 4=23191
Nb, polycrystalline 0=16231
Ni 2=10760
Ni, dislocation density study 1=12386
Ni, effect of dissolved H 3=11153
Ni, fatigue, crack propagation 2=23789
Ni, 500°C, compressive prestrain effect 3=13361
Ni, 500°-600°C, effect of impurities 3=25631
Ni, following creep, structural changes 1=14895
Ni, high temp. intercrystalline cracking 0=18278
Ni, Ni-Au and Ni-Ag, comparison at 500° and 600°C 4=23184
Ni, time-to-rupture 1=1337
Ni alloys, fatigued by bending, rel. to twinning 0=6302
Ni-0.1% Au, effect of cold work 2=16962
Ni—Cr, mechanisms 3=3239
Ni-Cu alloys 2=10760
Ni—Pt group metal alloys, stress-rupture 4=23188
Ni-Sn solid-solutions, unstable 2=4328
Pb, fatigue life, effect of air pressure 1=6482
Si, single crystals, mechanism 3=23360
Sn crystals, Ga-coated 0=6313
Th, neutron irrad. 2=16965
Ti and Ti alloys, cavitation fracture resistance, rel. to phase composition and structure 2=21441
TiC—WC—Co alloys 3=18184
TiO_2, 600°-1300°C, rel. to stoichiometry 4=13443
TiO_2, symmetrical fourfold helical fracture 0=18282
U, elongation, var. with grain size 4=4492
α-U, single crystal extended to fracture, struct. 4=23222
U single crystals, at —196°C 2=23756
U, single crystals, -196°C, tension 3=15989
U, tensile, nucleation and propagation 2=4344
UO_2, cleavage surface 1=20385
W, cast, effect of recryst. anneal 3=11183
W, grain boundary rupture, at high temp. 3=13368
W rods, recrystallized, recovered and wrought, behaviour 4=30789
W, surface, rel. to twinning 3=18210
WC, Co-bonded, mechanism 4=23221
WC—Co carbides, sintered, mech. 3=11178
W-Co alloys, brittle, rel. to composition 2=23780
Zn, amalgamated, brittle fracture 2=2334
Zn bi- and monocrystals, shear failure 1=1509
Zn, brittle rupture 0=689
Zn, due to cyclic stresses 2=21428
Zn, delayed, by cyclic unloading during extension 4=23228
Zn, dependence on stress duration 1=14907
Zn, dependence on stress duration 1=20370
Zn, low temp. thermal cycling 2=23776
Zn, mechanism, effect of surface-active metallic melts 1=20383
Zn, mechanism, effect of surface-active metallic melts 2=6751

Fracture—contd
- Zn monocrystals, amalgamated, brittle fracture 1=6471
- Zn, monocrystals, effect of Ga coating 0=1871
- Zn, polycrystalline, deformation by hot torsion 4=28990
- Zn, polycrystalline, in tension 3=18200
- Zn single crystals 0=6316
- zinc whiskers, effect of thickness and treatment with Hg 1=1344
- zinc whiskers, Griffiths cracks formation at dislocations 1=1344
- Zn—(0 to 0.5%)Cd, brittle, rel. to surface phenomena, —200°C to +200°C 4=10363
- ZnTe, cleavage plane 2=8776

Francium
- electrical resistance and density, calc. 4=14182

Free radicals
- (Heading introduced in 1961).
- acetyl-d,l-alanine, γ-irrad., e.s.r. 2=12815
- acetyl-L-glutamic acid product after γ-irrad., e.s.r. 3=3164

- dibenzo-p-dioxin, e.s.r. h.f.s., p and C^{13} 3=20017
- di-t-butyl nitroxide dissolved in methylcyclohexane, e. s. r. linewidths, effects of hydrostatic press., anisotropic region 4=24242
- diglycolic acid monohydrate γ-irradiated 2=6689
- dihydropyrazine cation radical, e.s.r. spectrum, isotropic hyperfine splittings, signs 4=25728
- dihydropyrazine, methyl substituted, and related radicals, e. s. r. 4=28256
- dimers, spin-spin interactions 2=23012
- dimesitylmethyl, paramagnetic resonance 1=12319
- dinitrobenzene anion, e.s.r. linewidth alternation 3=4776
- diphenylamine, e.s.r. study 1=9951
- diphenylbenzidine, e.s r. study 1=9951
- $\alpha\alpha$-diphenyl-β-picryhydrazyl, antiferromagnetism 3=18117
- DPPH, double magnetic resonance in different directing fields 1=12312

Free radicals—contd
DPPH (diphenylpicrylhydrazyl). double quantum transition 1=14092
diphenylpicrylhydrazyl, dynamic nuclear polarization, Overhauser effect 1=14818
DPPH (diphenylpicrylhydrazyl), electron—proton coupling, reson. line splitting 1=14093
DPPH, gyromagnetic ratio apparent change in weak field, 4=17311
DPPH—hydro peroxide solutions, e.s.r. 4=202
DPPH, low-field e.s.r. at low temp. 4=25727
DPPH, mag. exchange-lattice relaxation theory 2=549
diphenylpicrylhydrazil, magnetic susceptibility, 294° 1.2°K Curie constants 4=10250
DPPH, molecular distortion in crystalline parent hydrazinc 4=28336
diphenylpicrylhydrazil, multiquantum transitions in radio-wave region 4=25604
DPPH, nuclear relaxation in molecular liquids 3=21411
DPPH in polystyrene, e.s.r. 1=20228
diphenyl picryl hydrazyl, proton mag. resonance 2=4288
diphenyl picryl hydrazyl, proton resonance 1=878
DPPH, recrystallization effect on e.s.r. line width 4=26394
$\alpha\alpha$-diphenyl-β-picryhydrazyl, relax. time var. down to 1.5°K. 4=30730
DPPH, spin—spin relaxation 1=882
DPPH, 2 x 10^{13} spins detected with new e.s.r. spectrometer 1=4736
2,2'-dipyridyl anion, e.s.r., h.f.s., effect of reducing agent 3=20020
2,2' dipyridyl-Na complex, e.s.r. spectrum 2=20862
diquinone anion e. s. r. 4=28257
DTBN, nuclear relaxation in molecular liquids 3=21411
dynamic polarization of nuclei in solutions 1=12311
electrolysis prod., and e.s.r. 4=8960
electron spin resonance of crystalline free radicals 1=11473
e.s.r., hyperfine interaction tensors 2=2016
e.s.r. meas., improved flow cells 4=22436
e. s. r. nature, magnetically diluted 4=2710
e.s.r. in soln., h.f.s., exchange relax. 2=14321
e.s.r. spectra, anomalous alternating linewidths 3=2653
e.s.r. spectra, isotropic hyperfine splitting, semi-empirical theory 4=9765
ethyl, vibrationally-excited, decomposition 2=14335
ethyl-d$_1$, decomposition 4=10639
ethyl-d, isotope effects in decomposition 3=16154
ethyl-d$_3$, chem. activated, decomposition 3=11347
ethyl-d$_3$, excited vibr., deactivation by D$_2$, He 4=22441
ethyl, heat of formation 3=20978
ethyl, reactions with I atoms 3=8972
ethyl bromide, irradiated, e.s.r. detection 2=8125
ethynyl, in solid Ar, e.s.r. meas. 4=12532
eye melanin, kinetics, and rel. to O$_2$ adsorption by semi-conductors 4=20975
ferromagnetism, Wurster's blue perchlorate, from e.s.r. 4=6657
formyl, e.s.r. and structure 2=8124
frozen solutions, dynamic nuclear polarization 4=12533
g-factors, relative, e.s.r. meas. method 4=9764
g-values, precise meas. and structure depend. 1=14090
in γ-irradiated compounds with H bonds 1=6056
in γ-irradiated glycylglycine 1=11485
in γ-irradiated ice 1=8861
from γ-irradiated small molecules at low temp. 3=12874
in γ-irradiated thiodiglycolic acid crystal 1=7787
in gases, cyclotron resonance 1=6912
glycylglycine HCl, irradiated crystals 3=15942
heteroatom radicals, SCF calc. of spin-density distrib. 3=10530
hindered internal rotation and e.s.r. data 2=22998
hindered internal rotation and e.s.r. spectra 3=12861
homologous series decomposition kinetics 4=30484
hydrazyl, hyperfine interactions 1=8860
hydrazyls, h.f.s. in e.s.r. 1=14106
hydrocarbon ions, g-values, structure depend. 1=14090
hydroxyl, dissociation in r.f. discharge 2=2029
identification, review 2=4554
indigo carmine, aq. soln., e.s.r. hyperfine structure lines 2=23010

Free radicals—contd
inorganic, bond dissociation energy rel. to (ionization pot.—electron affinity) 4=9777
interaction, with silica gel surface, e.s.r. study 4=1321
intermediates of H—polystyrene reaction, e.s.r. spectra 1=17340
intramolecular charge transfer in aromatics 1=12322
ionization and dissociation energies 3=8303
in irradiated benzene and derivatives, e.s.r. 3=2670
in irradiated crystals of trifluoroacetamide and penta-fluoropropionamide 4=26395
in irradiated oriented polyethylene 2=23022
in irradiated polyoxymethylene 2=21371
in irradiated polytetrafluoroethylene, e.s.r. 2=20893
in irradiated polytetrafluoroethylene, e.s.r. spectrum 1=19673
isobutyl, isomerization 3=8948
isobutyl radicals, thermal reactions 3=3390
isobutyric acid, e.s.r. spectra 2=6219
isopropyl, thermal isomerization 2=14236
dl–isovaline, γ-irradiated, e.s.r. det 2=8126
itaconic acid, irrad., e.s.r. study 4=1886
ketyls, spin distrib. 3=4777
Keynon–Banfield, photocond. and semicond. 2=14584
kinetics in cyclohexane-O$_2$ system 1=20727
lifetime, effect on e.s.r. 3=8311
lifetimes meas. by e.s.r. 4=25721
macromolecular, prod. by mech. destruction of polymers 2=2031, 8129
mag. exchange–lattice relaxation, theory 2=549
malonic acid, X-ray irrad., CH$_2$COOH 2=6892
mass spectrometric observation 4=16563
mercaptosuccinic acid, e.s.r. of γ-irradiated crystal 3=13304
in methanol, γ-irrad., e.p.r. spectrum 4=15379
methyl acrylate and methacrylate, at 77°K, e.s.r. 1=14107
methyl, adsorption in semiconductors, rel. to contact potential 4=6992
methyl, detection in electric discharge 1=1477
methyl group in CH$_3$C(COOH)$_2$ radical e.s.r. 2=2299
methyl, orbital following 4=17323
methylene imino, e.s.r. detect 2=12351
α- and β-methylnaphthenyl, spin density, calc. 1=6055
monochloroethyl and trichloromethyl radicals, recombination and disproportionation 3=8974
naphthalene negative ion, spin and charge distrib. 1=19660
neopentyl, dissociation in pyrolysis, catalytic transfer by HCl 4=23633
nitrile anion, spin-density distrib. 3=6428
n.m.r. second moment for oscillation in a periodic potential 1=9959
n.m.r. second moment of radical rotating in a periodic potential 1=881
nuclear relaxation, in molecular liquids 3=21411
in nylon, γ-irradiated 2=14337
n-octadecyl disulphide, γ-irradiated 3=6416
organic, bond dissociation energy rel. to ionization potential 4=9777
organic crystals, irradiated 2=12485
organic, e.s.r. studies, tritium as an internal radiation source 1=12307
organic, mag. suceptibilities, exchange effects 2=12738
organic, in solution, Overhauser effect and relaxation in weak fields 3=23910
Overhauser effects 1=14154
oxazine dyestuffs, e.s.r. study 2=23008
paramagnetic resonance study, high-sensitivity spectrometer 1=4736
perinaphthene, identification by e.s.r. 1=8135
in petroleum, effect of dissolved O$_2$ on spin-lattice relaxation 1=3571
phenothiazine oxidation products, e.s.r. 1=15905
phenoxy radicals in soln., nuclear-electron double resonance 4=24244
π-electron, C^{13} hyperfine interactions in e.s.r. spectra 1=17344
π-electron, in polycrystals, e.s.r. second moments 3=25560
π-electron radicals, self-consistent field theory of electron spin distrib. 1=14108

Free radicals—contd
- picryl-n-amino carbazyl, exchange-ordering and forbidden spin resonance transitions 1=11483
- picryl amino carbazyl, magnetic transitions 1=17364
- picryl amino carbazyl, n.m.r. Overhauser effect 1=17358
- polyene long radicals 2=18495
- polyethylene, irrad., behaviour of free rad. 4=1334
- in polyethylene, irrad., electron-spin density 4=3949
- polyethylene, due to irradiation, e.s.r. study 2=3779
- polyethylene, irrad., trapped radical disappearance, kinetics 2=16564
- in polyethylene, prod. by γ-irradiation 1=14344
- polyformaldehyde, γ-irrad., e.s.r. 3=12858
- in polymerization, redox, e.s.r. detection 4=22437
- in polymerization, redox, e.s.r. study 4=9786
- in polymethacrylate, e.s.r. dependence on γ-dose 3=25563
- polymethylmethacrylate, e.p.r. dep. on γ-irrad. dose 2=8123
- polypropylene, irrad., trapped radical disappearance, kinetics 2=16564
- polystyrene, e.s.r. spectrum 2=18494
- polytetrafluoroethylene, irradiated oriented, e.p.r. 3=17608
- polyvinyl chloride, γ-irrad., kinetics of radical reactions 1=1489
- produced in reaction of deuterated polystyrenes with H and D atoms 4=29219
- production and decay, kinetics 3=25810
- production by γ-irrad. at 4.2°K, e.s.r. 2=3791
- in n-propanol irradiated at 77°K 1=11130
- propyl, chem. activated, unimolecular decomp. 3=20993
- proton hyperfine interaction and spin—spin coupling 1=3574
- pyracene, e.s.r., 2nd order splitting and coupling const. 2=20861
- pyracene, e.s.r. spectra 3=22590
- pyrene anion, e.s.r. spectra 3=8310
- radiation-induced in frozen aq. solns. of S cpds., e.s.r. 3=15392
- radiation induced, microwave saturation 2=4269
- radiation-induced in sulphur cpds., e.s.r. in polycryst. state 3=3413
- radiation-production in barbituric acids 1=9173
- reaction on cold surfaces, rel. to H_2O_2 formation 4=10640
- recombination on semicond. surface, rel. to luminesc. 4=20476
- recrystallized, e. s. r. at low fields 4=28279
- redox polymerization, e. s. r. meas. and steric structure 4=28275
- second-order splittings in e.s.r. spectra of organic radicals 2=20860
- semiquinone, g-values, structure depend. 1=14090
- solid, paramagnetic excitons, theory 2=20975
- in solid polymer fracture products, e.s.r. 4=1885
- in solids, exciton—phonon coupling 4=9917
- in solids at low temp., flame propagation 1=20737
- in solution, det. by inverted Overhauser effect 4=25733
- in soln., e. s. r. hyperfine splitting assignment by linewidth analysis 4=28252
- in soln., e. s. r. line shapes 4=28253
- in solution, e.s.r. line-width variations 2=20859
- in solution, e.s.r. linewidths 4=25720
- in solution, rotational—diffusion, anisotropic, rel. to e. s. r. linewidths 4=30470
- solutions, e.s.r., and h.f.s. 3=14183
- solns., dilute, e.s.r. spectra, line-widths theory 3=23911
- solutions, Overhauser effect, p, e relax. and mol. motion 4=24245
- solvent effects in e.s.r. 3=6415
- specific heats and antiferromagnetism, organic crystalline radicals 4=10295
- spectra, microwave 4=22433
- spin—orbit interactions 4=6615
- spin resonance and hyperfine interaction 4=9763
- stabilization in cavities of water clathrate lattice 4=9784
- stabilization at low temp., NBS research and symposium summary (book) 1=14109
- substituted cyclobutane anions, e.s.r. 4=25726
- succinic acid irradiation, e.s.r. study 2=3180
- synthesis in elec. discharge 4=22433

Free radicals—contd
- in DL-tartaric acid irradiated crystal 2=6691
- terephthaldehyde anion, rotational isomerism, by ESR spectra 1=17368
- tetramethyl ammonium chloride, irradiated crystal, e.s.r. 3=8716
- tetraphenylhydrazine, e.s.r. study 1=9951
- tetraphenylpyrryl, e.s.r. 2=3778
- cis- and trans-thianthrene — 5, 10-dioxide, anions, e. s. r. study 4=3906
- thiazine dyestuffs, e. s. r. study 2=23008
- thio-indigo and derivatives, e.s.r., spin-density distrib. 2=16552
- thio-indigo, e.s.r. effect of solvent 2=20881
- thioxanthone S,S-dioxide, e.s.r. of mononegative ion 3=2655
- Tony blue (4,4' dipyridyl radical), e.s.r. spectrum 2=15619
- trapped H and D atoms in γ-irradiated ice 3=2669
- trifluoroacetamide, γ-irradiated single crystal 2=23707
- sym-trinitrobenzene and related radicals, e. s. r. study 4=30474
- triphenylcarbonium ion, n.m.r. spectrum 1=12313
- triphenylmethane, irrad., luminescence centres 2=21277
- triphenylmethyl, e.s.r., spin densities, corrections 3=20018
- triple mag. resonance, in benzene soln. 2=23011
- tris-p-nitrophenylmethyl, e.s.r. absorption 1=17342
- trivinylmethyl, spin density, calc. 1=6055
- unpaired electron spin, interaction with proton 2=14338
- in urea oxalate irradiated crystal 1=11488
- in d, l-valine, γ-irrad., e.p.r., 77° and 293°K 4=17685
- vinyl radical, β-proton hyperfine splittings 4=25732
- vinyl, in solid Ar, e.s.r. meas. 4=12532
- viologens, high-resolution e.s.r. spectra 3=20028
- Wurster's blue, e.s.r. reinterpretation 4=9766
- Wurster's blue perchlorate, exchange-ordering and forbidden spin resonance transitions 1=11483
- Wurster's blue perchlorate, ferromagnetism, from e.s.r. 4=6657
- Wurster's blue perchlorate, mag. susceptibility 3=11034
- Wurster's blue perchlorate, magnetic transitions 1=17364
- Wurster's blue perchlorate, n.m.r. Overhauser effect 1=17358
- in X-irradiated NH_4ClO_4 1=17594
- zero-field electron magnetic resonance 3=17609
- $(\phi_3AsCH_3)^+(TCNQ)_2^-$ solid, exciton mag. reson., zero-field 4=20584
- BH, BD energy states and transitions, l-coupling of excited states 4=25636
- C_2, CN, temp., in $O_2-C_2H_2$, $O_2-C_2N_2$ detonation in shock tube 4=7757
- CBr, absorption spectrum near 3000A 3=25092
- CD_3, abstraction of primary, secondary and tertiary H atoms 3=3384
- CF_2, i. r. spectrum 4=28209
- CH formation, in acetylene—O_2 detonation 1=12677
- CH π-electron radical, e.s.r. line shape 1=17341
- CH*, from simple molecules, angular momentum, distribution 1=8869
- CH, spectral band blackening in hollow cathode 3=19936
- CH, spin densities 3=12791
- CH, $^2\pi$ state, dissociation energy 4=12527
- CH_2, ang. depend. of spin densities on protons 4=25758
- CH_2, ionization potential 3=360
- CH_2, ionization potential and dissociation 2=548
- CH_2, solid state reaction with CO_2 2=15157
- CH_3 and CF_3, hydrogen abstraction reactions 1=20721
- C_6H_7, e.s.r. 3=15372
- $CH_2-(CH)_3=CH_2$, C atom spin densities 3=15393
- CH_3O, spectrum, u.v. absorpt., from photolysis of CH_3NO_2 4=22435
- $CH(SO_3)_2^=$, e.s.r. in K methane disulphanate 2=16566
- CN, $B^2\Sigma u^+-X^2\Sigma^+g$ systems 2=18452
- CN, excited, microwave transitions, optical detect. 3=6390
- CN, formed from C_2N_2, kinetics of disappearance 2=20882
- CN heat of formation 2=15130
- CN, rotational temp. meas. 3=12846
- CO_3^-, trapped, structure and spectra 3=6418
- DO_2, e.s.r., from D_2O_2 solns., 77° K, u.v. irradiated 3=2001
- D_2O_2 in D_2O in irradiated glasses, spatial distrib. rel. to irradiation 1=17363

Free radicals—contd
H, bond dissociation energy rel. to ionization potential 4=9777
H, condensation at low temp. 1=8838
H, in H_2O, HF, H_2, CH_4, at 4.2°K, e.s.r. 2=3791
in H_2, D_2, solid, films, prod. by p and d bombardment, 100-1000 V, e.p.r. 3=10550
HCO and DCO, electronic absorption spectrum 4=6594
HCO, low-temp. i.r. study of chemistry 4=25757
HCO_2, electronic structure and spectrum 4=6622
HNCN, spectrum and structure 3=8307
HO_2, e.s.r., from H_2O_2 soln., 77° K, u.v. irradiated 3=20012
HO_2, low-temp. i.r. study of chemistry 4=25757
HO_2, mass spectrometry 2=15131
HO_2, molecular orbital study of geometry 2=22979
H_2O_2 in H_2O in irradiated glasses, spatial distrib. rel. to irradiation 1=17363
in H_2O_2—H_2O frozen irrad. solns., e.s.r. study 1=9950
HSiCl and HSiBr, spectrum and structure 4=15345
KNO_2, due to irradiation, absorption bands 2=18832
KrF, e.s.r. spectrum at 77°K 4=28872
Mg, in solid inert-gas matrix, absorption spectrum 1=17269
Mn, in solid inert-gas matrix, absorption spectrum 1=17269
N atoms trapped in X-irradiated NaN_3 1=8921
N, e.s.r., effect of matrix interactions on hyperfine splitting 2=18420
N and N_2^-, in γ-irrad. KN_3, e.s.r. 2=4266
NBr, i.r. spectrum 4=20122
NBr, low temp. i.r. study of chemistry 4=25757
NCl, i.r. spectrum 4=20122
NCl, low temp. i.r. study of chemistry 4=25757
ND, two new bands 3=12876
NF, i.r. spectrum 4=20122
NF, low-temp. i.r. study of chemistry 4=25757
NF_2, electronic absorption spectrum 4=28281
NF_2, i.r. spectrum and structure 1=17319
NF_2, i.r. spectrum and thermodynamic functions 2=20883
NF_3, bond strength 1=19656
NH, band system 3=12876
NH, emission spectrum, rel. to shock wave in N_2-H_2 systems 4=17320
NH, fluorescence 4=4711
NH, low-temp. i.r. study of chemistry 4=25757
NH_2, H^1 and N^{14} nuclear coupling, orbital theory 2=3767
NH_2, hyperfine e.s.r. spectrum 4=6658
NH_2, reactions, kinetic spectroscopy 1=10586
NH_2, recombination in decomposition of NH_4 3=8308
NH_3^+, h.f.s., mol. orbital calc. 3=15343
NH_4, stability 4=9785
$(NH_4)_2HPO_4$, irrad., π-electron radical 3=11117
$NH(SO_3^-)$ in γ-irrad. K sulphamate, e.s.r. 3=6417
NH ($X^3\Sigma^-$) from NH_3 flash photolysis 4=7769
NO, e.s.r. spectra, solvent effects 4=11218
NO_2, trapped, structure and spectra 3=6418
NS, band system obs. 2=20818
$N(SO_3)_2^=$, e.s.r. in K amine disulphanate 2=16566
Na perfluorochloride, X-irrad., e.s.r. spectra of free radical formed 4=20601
O_2, in solid N_2, electron excited spectrum 1=6221
O_2^- mol. in alkali halide lattice, mech. alignment 2=14362
O-hydrides, wave functions, anal. of calculations 4=9731
OD, emission spectrum 1=14014
OD, e.s.r., from D_2O_2 solns., 77° K, u.v. irradiated 3=20012
HO, adsorbed by SiO_2, spectrum and heat vars. 3=8922
OH bands in methyl alcohol—air flames 3=12830
OH bands in nightglow spectrum 2=913
OH, chemiluminescence, H_2—O_2 reactions 4=13705
OH, delayed appearance in acetylene-O_2 reaction 4=20830
O^{17}, ^{18}H, dipole moments, h.f.s. 3=12828
OH radical, dipole moment from microwave Stark effect 1=7497
OH, in discharge-flow systems, formation, lifetime decay 2=6232
OH, e.s.r., from H_2O_2 solns., 77° K, u.v. irradiated 3=20012
OH, electron spectra and vibr.-rot. interact. 2=20819
OH, electronically excited in H + O_3 flames 2=3789

Free radicals—contd
OH, emission spectrum 1=14014
OH, from γ-irradiated ice and water 4=5196
OH ground state, h.f.s. consts. 4=1270
OH and OD, formation in tritiated H_2O and D_2O 1=7498
OH, optical refractivity, behind shock waves, interferometric meas. 1=2788
OH, from photodissoc. of water, rotational states 1=12321
OH, role in H diffusion in SiO_2 4=20304
OH* split from H_2O, abnormal rotation, statistical model 4=17321
OH* split from H_2O_2, rotational states, ang. momentum effect 4=28282
OH, stabilization in ice, under γ irradiation 3=25150
OH, u.v. band system, fundamental data 2=20822
OH^-, spectrum and radius in solution 1=11128
OH_2 vibrational excitation in H + O_3 flame, 1-3 μ emission 2=16513
($ON(SO_3)_2^{2-}$), in solution, electron spin resonance, thermal motion effect 1=9407
PH and PH_2, lower electronic levels 4=28200
PO, spectrum in P_4 + O reaction 4=23638
PO_3, e.s.r. and structure 2=2017
$RCH_2CHCOOR'$ in ester—urea inclusion cpds., e.s.r. and molecular motion 4=28277
S^{2-}, reactions with PO_3^-, B_2O_3, TiO_2, MoO_3, WO_3, in molten NaF and NaCl, by cryometry 3=8967
SH, SD and SO, e.s.r. spectra 4=3905
SO, absorption spectrum and dissoc. 3=2625
SO, microwave spectrum 4=28203
SO, millimeter wave spectroscopy 4=28202
SO radical, dissociation limits, u.v. band interpretation 4=6655
SO, spectrum, vacuum u.v., and dissociation energy 4=17861
SO_3^-, prod. by γ-irrad., optical and e.s.r. spectra 2=16565
S and Se org. cpds, u.v.-irrad., comparison 4=30473

water on ice-forming nuclei, n. m. r. study 4=13539
water, ice interface morphology 4=4548
water injected into supersonic flow 1=11774
water, mechanism 0=10802
water, phase tranformations, sorbed on Si gel, n.m.r obs., to -100°C 3=19069
water, supercooled, spongy ice formation 3=3928
wet ground, classical Stefan problem, numerical integration 3=24111
para- and meta-xylene, discontinuous, rel. to viscosity meas. 4=11179
Al, fluidity and prefreezing cluster formation 3=9437
Au—Cu, solidification curves 3=12002
Bi, high-purity, as temp. standard 3=9642
$BiSbTe_3$, rate of freezing effects on thermoelectric props. 1=8969
CO_2 liquid sat. with N_2, freezing pt., pressure depend. 0=8709
$CuAl_2$—Al eutectic alloys, grain structure 3=11283
Fe—Al alloys 0=6383
Fe—Au alloys, liquidus—solidus relns. 3=11285
Fe—C alloys, nucleation undercooling and struct. 4=21352
Fe—Ir alloys, liquidus—solidus relns. 3=11285
Fe—Os alloys, liquidus—solidus relns. 3=11285
Fe—Tc alloys, liquidus—solidus relns. 3=11285
Ga II, freezing point 1=11527
H_2O drops, and electrification 4=23768
He^3, liquid, freezing curve, 1-3°K at various press. 0=10821
He^3, liquid—solid transform. anomalous 3=3937
He^4, at 77.3°K and 14140 bars 2=9474
He^3—He^4 mixture, freezing and lambda curves 2=13497
He^3—He^4 mixtures, and λ curves 4=14485
He^3—He^4 mixtures, phase diagram, down to 0.45°K 4=8550
He^3—He^4 solutions, liquid—crystal equilib. diagram, 1.4-4°K 4=29823
KCl, aq. soln., pre-freezing effects 3=3927
$LaCl_3$ solutions, freezing point 0=19506
NaF, f.p. depression by alkaline earth fluorides 2=5221
NaF, freezing point depression, effect of transition metal difluorides and CdF_2 4=5454
NaF, f. p. depressions, effects of trivalent fluorides 4=8505

Freezing—contd
NaOH aq., rel. to solubility 3=7387
Pb, high purity as temp. standards 0=10803
Pb-Sb, solute distrib. 2=9460
Pb—Sn eutectic, unidirectional solidification at known freezing rate 4=4550
Sn, for temp. standards 0=2271
Sn—Ag alloys, solute distrib. after solidifaction 3=16119
$ZnCl_2$, aq. soln., pre-freezing effects 3=3927

Friction
See also Internal friction.
abrasion, plastic deformation theory 0=3164
acrylonitrile, knitted, triboelectric properties 1=17859
adhesion effects 1=9097
on aeolotropic paraboloid, stresses and displacement 0=19014
algorithms for construction from moments 4=24014
alloys, high temp., due to oxide layer 3=20764
atmosphere 4=30929
atomic—molecular theory of fundamental law 4=10365
attractive molecular forces effect 4=10366
in binary gas mixtures, mutual frictional forces 0=8689
bitumen, frictional behaviour 1=12611
brake drum surface, bimetallic, temperature determination 0=16915
brittle crystals, abrasion, friction rel. to wear 3=11188
capstan equation, string rigidity correction 1=15768
classical theory, modified by surface deformation 0=3166
coefficient meas. from intermittent motion expts. 2=13295
coeff. meas. rel. to sliding vel. and time of stationary contact 4=10367
coeffs. for Fokker—Planck eqn. in a plasma 1=16320
Coulomb, eqns. of motion of systems with 3=1647
Coulomb's law and microhardness 3=13388
crystal, moving dislocation 3=17728
dense fluids, soft doublet and soft singlet friction coeffs. 4=11174
dependence on surface roughness 0=10277
diamond on diamond 0=8141
diamond on diamond in high vacuum 4=23152
diamond on glass 0=8140
diamond sliding on lead 3=13388
dielectric friction on a moving ion 3=12294
dielectric friction of rotating dipole 3=12295
diffusion, isothermal, binary and ternary, frictional coeffs. 4=8119
disk brakes, transient temp. at friction surfaces 0=6967
disk, rotating, friction of gas 2=1177
drv. vibr. excitation 4=23114
dynamical coeff. 0=19035
effect on forced oscillations in rotating system 1=5244
effect on forced oscillations in rotating systems 1=10461
effect of natural osc. of sliding blocks 4=13388
elastic surface contacts, law 2=2666, 9222
electrification of belts of insulating materials 4=27454
electrographite 3=8787
electrographite on Cu, surface and crystal-structure changes 3=6807
fluids, potential flow, resistance 2=7184
Fokker—Planck eqn. of plasma 1=16321
frictional oscillations of solids 1=5320
gas flow between permeable surfaces, rarefaction effect 4=29651
gas lubricated bearings for gyroscopes 2=11317
gas, at wall, reduction by mag. field and ionized injection 4=19182
and gases, flow, with heat transfer, uniform channel 3=14194
gases, polyatomic, dilute; molecular 3=1724
general mechanics, introduction of friction 2=1096
graphite brush contact, rel. to temp. and contact spots 2=2339
graphite, on emery paper 1=1552
graphite, graphitic carbon, and non-graphitic carbon 1=11528
graphite sliding on Cu, orientations in surface film 4=17836
graphite whiskers, atmosphere dependence 1=12612
gypsum, abrasive friction, effect of surface dimensions 1=4003

Friction—contd
hard solids at high sliding speeds 2=21454
heating and melting of solid by viscous fluid, theory 2=12875, 16974
heating and melting solids, theory 1=6988
high contact pressures, influence 1=9098
high-speed, effect on deformation, heating and melting of solids 1=14897
high-speed, metal on metal and diamond 0=8138
ice, in contact with optically flat materials, sliding experiments 1=14932
influence of surface energy 1=11523
interionic, in molten $AgNO_3-NaNO_3$ 4=29617
ions, coeff. of dynamic friction 1=16274
kinetic coefficient, for small displacements, determ. 4=15698
Kirkwood's in Brownian motion in liquids 0=6774
lamellar solids, cleavage studies in ultra-high vacuum 4=20674
lignum vitae 1=4004
liquid friction const. from flow anisotropy 3=21316
liquids, in linear dissipative processes 2=9256
lubrication at point contacts 1=14930
measurement of coeff. during continuous rubbing 3=20763
measurement method for metals and plastics 4=7400
meas., bet. rotating drum and sample 3=8788
measurement, sliding 4=7399
measurement at ultrahigh vacuum 3=25647
meas., in ultra-high vacuum, by inclined-plane 3=9403
mechanical systems, general law of motion 3=1648
mechanism, effect of released elastic stresses 2=6758
metal and rubber-covered pressure rollers 0=8134
metal surfaces, theory 1=10224
metals, during abrasion, different behaviour of hexagonal and cubic 4=13387
metals, coeff. depend. on normal loads 4=28928
metals immersed in liquid Na 3=1249
metals, junction growth in, effect of combined stresses and surface contamination 0=8136
metals and non-metals, survey 2=17381
metals, in reciprocating sliding 1=11523
metals, surfaces in contact, displaced metal role 4=23115
metals, two-term formula 1=20396
metals, two-term formula 2=10774
mica surfaces 1=11520
mineral particles 0=8135
molecular friction const., calc. 4=21115
non-metals, plastically deformable 2=800
in nozzle flow 1=15803
nylon monofilaments, coeff. rel. to load 2=8760
oxygen + inert gas, combustion and flow in boundary layer 1=4369
pick-up of copper and duralumin on bonded tungsten carbide 0=6322
polymer surfaces 2=21455
polymers, adhesion theory 1=20344
polymers, up to few 100 cm/sec, -60 to + 300°C 3=16012
polymers, rubber-like, at low temp. 4=7398
polymers, two-term law, on steel 3=13387
polyvinylchloride, knitted, triboelectric properties 1=17859
PVC, rigid and plasticized 3=11192
Resource Letter F-1 4=7397
review of research at Cambridge 1=11521
rolling, on anisotropic surfaces, directional depend. of resistance 0=13920
rolling, butyl, silicone and Neoprene elastomers 0=4572
rolling, of cylinders on planes 2=15521
rolling, hard cylinder on viscoelastic material 0=3477
rolling resistance, effect of surface texture deformation 0=8132
rolling resistance of steel 0=8131
rolling, single Cu crystals in plastic range 2=2340
rolling and sliding, hysteresis losses 1=14929
rolling spheres, elastic hysteresis loss, theory 0=3478
rubber, lubrication mechanism 2=15559
rubber, var. temps. and velos., relation to viscoelasticity 3=16013
rubber-like polymers and steel, measurement 1=11525
sapphire sliding on steel 2=21452
sapphire on steel, erratum 3=11191
single contacts and multiple encounters 1=11522
skin-friction in gas flow, effect of gas-injection 3=23919

Friction—contd
skin, for incompressible laminar flow over porous wedges 2=2675
skin, for supersonic flow 4=2867
sliding friction, "barrier" in front of sliding ball 2=1097
sliding, wear resist. of surface layer 2=14912
solid bodies in vacuo and various vapours 0=4573
solid-elastic, oscillations on coming to rest 2=11309
solid surfaces, initial contact slip, nature 4=10368
between solids at high pressures 4=17720
spinning impact of imperfectly elastic bodies 1=15770
steel, abrasive friction, effect of surface dimensions 1=4003
steel, on Al and other metals, resultant work hardening 1=6465
steel, on Al and other metals, resultant work hardening 1=10220
steel, coefft. meas. rel. to speed 4=7400
steel on steel, coeff. meas. rel. to sliding vel. and time of stationary contact 4=10367
steel surfaces over stearic acid film, molecular motion in the film 1=1354
steel, wear, X-ray diffr. study 1=15187
study by ultra-high vacuum techniques 4=20639
rel. to surface deformation 0=4571
surface and vacuum 2=13188
Teflon, on Teflon and steel, effect of pressure 3=6808
theory of contact 0=6718
thermoplastics, rolling friction 1=11526
on truncated cone, stresses and distortion 0=19015
turbulent boundary layer at a plate 1=4368
turbulent flow of fluid with var. properties, and heat transfer 4=18457
two-component fluid, relation with diffusion 1=15852
tyres on wet road 0=2144
various materials on Sn and Pb, effect of adhesion 0=16245
wear of Al and Be, surface re-orientation 0=704
wear criteria of materials 0=6323
wear, influence of elastic deformation 2=4351, 12872
wear particle, viscoelastic, between sliding surfaces 3=16564
wear of polymers 1=4002
wear of polymers 1=10223
wood, on steel and PTFE 0=8137
Ag, on abrasion 1=1353
Ag, during abrasion, with emery cloth 2=8758
Ag, Au, Cu, Pt, low values in reciprocating sliding 0=3165
Ag in friction with Ag, Cu and Ni, effect of chemical affinity upon adhesion 4=10369
AgBr, on emery paper 2=800
AgCl, on emery paper 2=800
Al, on abrasion 1=1353
Bi, heated, and Pyrex 2=801
C, electric-motor brushes, effect of current 4=7415
CCl_4 liquid friction const. 3=21317
Cu, on abrasion 1=1353
Cu, abrasive friction, effect of surface dimensions 1=4003
Cu, coefft. meas. rel. to speed 4=7400
Cu, cold rolling 2=10763
Cu, on Cu, surface damage, X-ray diffraction study 4=15706
Cu, effect of released elastic stresses 2=6758
Cu in friction with Cu, Ni, and Ag, effect of chemical affinity upon adhesion 4=10369
Cu, sliding friction mechanism 2=14913
Fe, on abrasion 1=1353
He II, normal—superconducting component friction in rotation 1=4527
HeII, between normal and superfluid, along vortices 4=18514
He II, superfluid and normal components 2=13500
HeII, superfluid and normal components 3=5571
He II, between superfluid and normal components 3=21645
Mo, on abrasion 1=1353
MoS_2 sleeve bearings, sintered, space friction evaluation 4=20673
$MoSe_2$ 1=14931
NaCl, abrasive friction, effect of surface dimensions 1=4003

Friction—contd
- Ni in friction with Ni, Cu and Ag, effect of chemical affinity upon adhesion 4=10369
- Pb, surface 2=23795
- Pt, on abrasion 1=1353
- Si, surface rubbed, density of surface traps 3=13065
- Sn, surface 2=23795
- U, on abrasion 1=1353
- W, on abrasion 1=1353
- Zn, surface 2=23795

Fundamental concepts

- Gd^{3+}, paramag. relax. in CaF$_2$, meas. 4=7328
- Gd^{3+}, in paramag. salts, S-state, relax. time 1=3927
- Gd^{3+}, S-state, crystal-field splitting 1=7517
- Gd^{3+}, in zircon, paramag. resonance 4=15673

Gadolinium compounds
- paramag. resonance of ^{8}S state ions 1=6417
- paramagnetic susceptiblity of 7 cpds. 2=8605
- Gd alloys and intermetallic cpds., e.s.r. meas. 2=12821
- Gd–ceric earth mixed garnets, cryst. and mag. props. 3=3125
- Gd ethylsulphate, spin-lattice relaxation 2=18950
- Gd ferrite, magnetic anomalies, in low-temp. region 1=20123
- ferrite garnet, etching 3=18240
- Gd gallate, magnetic saturation, high pulsed fields 4=19154
- Gd garnet, effect of substitution of Fe by Sc on mag. props. and crystal structure 4=7650
- Gd garnet, spin wave modes, "optical"
- garnets, ferrimag. exchange interaction 0=3096
- garnets, ferrimag. resonance 0=13862
- garnets, mag. ion distrib. and interaction 0=11893
- Gd hydride, elec. conductivity rel. to composition 4=20328
- Gd hydrides, statistical treatment 4=13486
- Gd iron garnet, mag. structure at low temps. 3=3196
- Gd molybdate, red luminescence under u.v. excitation 3=13206
- Gd oxides, mag. props., temp. depend., garnets and perovskites 0=11884
- Gd^{3+} perchlorate solutions, hydration geometry, from n.m.r. 3=18832
- Gd salts, Gd^{3+} absorpt. bands, theory 2=12593
- Gd salts, solns. and crystals, luminescence 2=10616
- Gd-transition elements, mag. moments 0=11823
- GdAg—GdIn, anteferro- and ferromag. props. 4=28764
- GdAl$_2$, mag. moment and Curie pt. 3=991
- GdAl$_2$, negative Knight shift, Gd^{3+} exchange polarization 1=7524
- GdAl$_2$, n.m.r. rel. to cond. electron polarization 3=1202
- Gd$_3$Al$_2$, crystal struct., atomic 4=23442
- Gd$_3$Al$_3$Fe$_2$O$_{12}$, ionic distrib. 1=20562
- GdAs, Dember and photoelectromag. effects, 140° to 300°K 2=4075

Gadolinium compounds—contd
- GdB powder, emissivity .0=1619
- GdB_6, electrical resistivity and paramag. res. 2=3998
- GdB_6, antiferromag. props. 1=6383
- Gd_4Bi_3, ferromagnetism 4=13181
- Gd_4Bi_3, prep., ferromag. props. 3=15776
- $GdCl_3$ ferromag. susceptibility and magnetization meas., 1.5° to 20°K 3=1057
- $GdCl_3$, luminescence, solid and in soln. 3=10988
- $GdCl_3$, magnetocaloric effects 3=15803
- $GdCl_3$, specific heat meas. from 1.2°-2.9°K, discontinuity at Curie pt., 2.2°K 4=17363
- $GdCl_3.6H[D]_2O$, fluorescent transitions, rel. to vibration of neighbouring molec. group 4=1773
- $GdCl_3.6H_2O$, luminescence, resonance line self-reversal in thick crystals 4=26241
- $GdCl_3.6H_2O$, mag. behaviour at low temp. 4=17670
- $GdCl_3.6H_2O$, paramag. relax., 1·1-4·2°K, 2-2660 c/s 3=8719
- $GdCl_3.6H_2O$, sp. ht., lattice energy and entropy 1=8881
- $GdCl_3.6H_2O$, spin—lattice relax. 1.1° to 4.2°K 3=3183
- $GdCl_3.6H_2O$, u.v. absorpt. spectrum 3=10945
- Gd–Co alloys, antiferromag. interactions by magneto-thermal and X-ray meas. 3=1000
- $GdCoO_3$, crystal structure and mag. property 4=26649
- Gd—Dy alloys, magnetic spiral struct. between Curie and Neel points 4=13110
- Gd–Er, elec. cond. and mag. phenomena 3=13033
- $Gd(EtSO_4)_3$, luminescence, solid and in soln. 3=10988
- GdF_2, magnetic properties 4=23018
- GdF_3, hyperfine interaction anomalies, Gd^{3+} exchange polarization 1=7524
- Gd–Fe alloys, antiferromag. props. 3=1000
- Gd—Fe, Co or Mg system compounds, crystal structure, atomic 4=4605
- Gd–Fe, crystal structure, new cpds. 2=4437
- Gd–Fe garnet, anomalies, in low-temp. region 2=23682
- $GdFe_2$, antiferromag. props. 3=1000
- $GdFe_5$, antiferromag. props. 3=1000
- GdFe garnet, chem. faults and dislocations, etching method 2=23814
- GdFe garnet, far i.r. absorption spectrum 3=15680
- GdFe garnet, magnetic anisotropy 3=15787
- GdFe garnet, magnetic-dipole induced normal mode 0=13833
- GdFe garnet, Nd-substituted, mag. and crystallographic study 1=12542
- Gd–Fe garnet, resonance near mag. compensation temp. 0=3119
- Gd–Fe garnet single crystal, exchange resonances0=13861
- GdFe garnet, spin-wave normal modes calc. 4=7293
- GdFe garnet, susceptibility below the Néel pt. 1=14746
- GdFe garnet, temp. dependence of mag. props. 3=23188
- GdFe–YFe garnets, mag. moments and lattice consts. 0=3089
- Gd_5Ge_3, crystal struct., atomic 4=23442
- Gd–La, superconducting, sp. ht., latent heat at critical temp. 0=19553
- Gd–Lu, elec. cond. and mag. phenomena 3=13033
- Gd–Mn alloys, structure and mag. props. 2=12925
- Gd–Mn, mag. moments 0=11823
- $GdMn_2$, antiferromagnetic props. 3=15910
- $GdMn_5$, magnetic characteristics 1=9024
- Gd_6Mn_{23} crystal struct., atomic 4=23443
- $Gd_3Mn_2Ge_2GaO_{12}$, ferrimag. exchange interaction 0=3096
- GdN, $Gd^{155,157}$ n. m. r. 4=13344
- $Gd(NO_3)_3.6H_2O$, spec. heat, 1.3° to 220°K 2=20936
- Gd–Ni, magneto-structural studies 0=11824
- GdNi, crystal struct, rel. to mag. props. 4=30854
- Gd_2O_3, mag. suscept. at high temps. 2=16894
- Gd_2O_3, specific heat and thermodyn. props. 3=20105
- $Gd_2O_3{:}Nd^{3+}$, stimulated emission and fluorescence at room temp. and 77°K 4=17602
- $xGd_2O_3.(3-x)Y_2O_3.5Fe_2O_3$, initial permeabilities 0=10137
- $GdOs_2-LaOs_2$ solid solns., supercond. transition rel. to Curie point 0=16956
- GdP, ferromagnetism induced by high fields 4=17649
- Gd–Pb, superconducting films, Gd depend. 0=8933
- Gd_5Pd_2, ferromagnetism 4=13220
- $Gd_xPr_{(1-x)}Al_2$, magnetic moments 3=991
- $GdRu_2$, crystal structure, atomic 4=4605
- $GdRu_2-CeRu_2$ solid solns., supercond. transition rel. to Curie point 0=16956

Gadolinium compounds—contd
- $GdRu_2$, in $CeRu_2$, superconducting solid soln., mag. props. 0=11844
- $Gd_2(SO_4)_3$, luminescence, solid and in soln. 3=10988
- $Gd_2(SO_4)_3.8H_2O$, ground-state splitting 2=10698
- $Gd_2(SO_4)_3.8H_2O$, paramagnetic resonance 2=21381
- $Gd_2(SO_4)_3.8H_2O$, specific heat, Schottky anomaly 2=16605
- Gd_2Se_3, antiferromagnetism, below 6°K, Curie temp. versus resistivity 4=13181
- Gd_4Sb_3, $Gd_4Sb_3-Gd_4Bi_3$, ferromagnetism 4=13181
- GdT, where T=Mn, Fe, Co or Ni; preparation and structure 1=7877
- GdT_2, where T=Mn, Fe, Co or Ni; preparation and structure 1=7877
- GdT_5, where T=Mn, Fe, Co or Ni; preparation and structure 1=7877
- $Gd_xTh_{1-x}Ru_2$, superconductivity and ferromag. 4=18567
- Gd–Y alloys, magnetic transitions 3=992
- Gd–Y alloys, microwave resonance results 3=15941
- Gd–Y alloys, paramagnetic susceptibility rel. to temp. 4=28778
- GdY mixed garnets, spontaneous magnetization meas. 2=750

spiral, theory of arm formation 2=7028
stars, time rate of formation 1=15496
stellar content, review 1=18133
stellar systems, polytropic gas-sphere representation 1=15519
stellar systems, rapidly rotating, collisionless, stability, local 4=29402
stellar velocity perturbations, test-star in homog. isotropic stellar population 0=4902
star—gas dynamics, cooperative phenom. 3=13914
star motion, third integral 4=17972
stars, early-type, vel. away from centre 3=13901
stellar absorption, total to selective ratio, var. with longitude 3=11553
stellar motion eqns., third integral 3=18647
stellar motion perpendicular to galactic plane 3=9251
structure and direction of rotation 0=8511
structure and evolution 1=8010
supercluster, local, as origin of cosmic rays 2=13923
superclustering, local supercluster 0=18823
Supergalaxy direction, emission 1=18194
surface density, at radio source positions 2=4860
Taurus-A, 8 mm wavelength emission 1=18206
3C 273 radio galaxy, super-luminous, light var. 3=23699
tidal action between galaxies 0=18824
types correl. with supernovae distrib. 2=7020
UBV system for early-type galaxies 3=16414
V444 Cygni, Wolf-Rayet component 4=23865
velocity models and 21-cm survey interpretation 2=11167

Galaxies—contd
- Virgo A source, observations at 8.7 cm wavelength 1=10396
- Virgo A source, observations at 8.7 cm wavelength 1=11687
- in Virgo cluster, chance association, instability 2=7021
- Virgo cluster, dynamics 2=7024
- Virgo cluster, neutral hydrogen ratio, radio obs. 4=13972
- Virgo cluster, radial velocity analysis 1=12773
- Vorontsov-Velyaminov atlas, investigation 2=9097

Gallium
- adsorption, by Zn, Cd and Sn, crack growth 3=20757
- adsorption, on Zn, diffusion 4=26729
- atom, anisotropy of van der Waals forces, meas. 2=12301
- atom, spectrum, oscillator strengths 3=15279
- atomic heat, 6-21°K 0=4269
- atoms, Ga^{68}, h.f.s. separations and nucl. moments 2=18418
- atoms, photo-ionization cross-section 0=15654
- atoms, scattering on inert gases 1=13969
- atoms, structure and spectrum 1=4897
- cond., elec., low temps., impurity effects 4=17474
- conductivity electrical, very pure Ga, temp. depend. at low temps., electron m.f.p. 3=22892
- conductivity, thermal, anisotropy, 83-293°K 3=17671
- contact potential, effect of gas discharge on surface 1=12372
- contacts on CdS single crystals 2=18725
- crystals, energy band symmetry rel. to spin–orbit interact. 2=20967
- Curie temp. variation with pressure 4=28806
- cyclotron resonance, ultrasonic, at 1.5°K 1=11186
- Debye temp. anisotropy, from elec. cond. 4=20217
- diffusion into Si, surface conc. 4=4077
- diffusion through SiO_2 to Si, segregation coeff., p–n jn. method, two-boundary method 4=30578
- effect on recombination in Si 1=17709
- elec. cond., pressure depend., up to 200 000 kg/cm^2 1=11251
- elec. resistance rel. to current, 1.2° to 1.4°K 3=17817
- elec. resistivity of films 1=17610
- elec. resistivity, residual, at 4.2°K, impurity contrib. 1=14359
- electron energy bands, free electron props. 2=12396
- electron energy loss spectra 2=3890
- Fermi surface topology from magnetoelec. data 2=12400
- films, amorphous, crystallization energy and resistivity 1=20597
- films, non-crystalline, electron diffr. invest. 2=837
- film, optical coefficients in i.r and u.v., meas 4=28686
- films, optical properties, effect of lattice defects 0=4391
- films, optical props., 4000 to 10000A structure, meas 4=28685
- film optical props., var. deposition speed 4=17564
- films, preparation, structure and electrical properties 3=17875
- films, prep. by vacuum evaporation 1=7884
- films, work function 2=9612
- fusion curve and polymorphic transition 3=6814
- heat of fusion using Calvet microcalorimeter 4=14434
- heat of fusion, γ Ga 4=24435
- heat of solution in Su at 750°K, and theories 4=24175
- ions, Ga$^-$, formation in electron interaction with GaI_3 4=18674
- K absorption spectrum 0=20733
- liquid coating on Zn, Cd, Sn crystals, rel. to their mech. props. 4=10353
- liquid, elec. resist. and thermoelec. power 3=23902
- liquid, electrokinetic effects, structural viscosity, in surface layers 4=24230
- liquid, electron mean free path, by positron annihil. 4=199
- liquid, electron transport props. 3=1710
- liquid, electron transport props. 4=21152
- liquid, nuclear quadrupole relax. 3=23915
- liquid, refr. and absorpt. index in visible and near i.r. 4=24213
- liquid, use as seal in vacuum valve 2=19638
- liquid, solubility of GaSb, GaAs and GaP 3=21333
- liquid, structure changes, viscosity and elec. cond. 0=12419
- liquid structure, near m.p., by positron annihilation 3=21306

Gallium—contd
- magnetic and magnetoelastic props., temp. depend. 2=744
- magnetic and magnetoelastic props., temp. depend. 3=5017
- magnetic props. of single crystal, 20°-1000°C meas. 4=7255
- mag. susceptibility anisotropy 0=18158
- magnetoelectric coeffts., low-field meas. 3=13044
- magnetoresistance, anisotropy, Fermi surface 0=9939
- mech. strength, Zn and Cd effect on 0=1871
- melting 3=24109
- molten, elec. resist. and Hall effect 3=9475
- n.m.r., electronic structure 0=4530
- neutron coherent-scatt. amplitude 3=25201
- optical consts. for three axes, over 0.4-8.0 μ 4=7134
- orthorhombic, crystal structure 2=2386
- oscillator strengths by first excited level lifetime meas. 1=17272
- p–n junction tunnelling theory 2=16741
- phase transformation, elec. cond. anisotropy 0=9930
- polycrystalline and liq., optical props., 4000-8000A 4=26189
- polymorphism at atmospheric pressure 3=8836
- purification and analysis, as semiconducting material 0=2065
- resistance, elec., 4-lead meas. system 4=30612
- resistivity, ideal, rel. to temp., and departures from Matthiessen's rule 4=17475
- solubility in Ge 0=12080
- solubility from saturation current in p–n junct., 360°-550°C 4=30793
- sp. ht. in normal and supercond. states 0=8947
- specific heat, 0.1°–4.2°K analysis 4=15426
- specific heat, 20-700°C 3=22659
- superconducting and normal, nucl. quadrupole resonance 0=19562
- supercond., press. var. of crit. temp. 4=21420
- superconducting transition, supercooling and anomalous spec. ht. discontinuity 1=4533
- superconductivity of high-pressure modification 4=8567
- superconductivity, plastic deformation effects 0=16955
- supercooling of droplets 2=7465
- surface fabrication, strain-free 3=25772
- surface tension at m. pt. and agreement with Mendeleevian periodicity 4=8189
- thermal conductivity, change on melting 1=9990
- thermal conductivity, change on melting 1=11171
- thermal conductivity in intermediate supercond. state 1=4973
- thermal conductivity, 300°-1200°K 3=10611
- thermoelectric power, liquid Ga 2=5027
- thermoelec. power of single crystals, temp. depend. 1=14529
- thin films, front-, support-side transmission factors, transmission factor, vacuuo, and meas. 4=30680
- thin films, visible and near i. r. properties 4=13034
- twinning mechanism 4=4528
- ultrasonic absorption, giant quantum oscillations, effective mass determ. 4=17355
- u.s. pulse propagation, 62 Mc/s 3=10592
- unstable phase, latent heat of fusion 0=5225
- valence electrons, approx. wave-functions 0=469
- X-ray K absorption anisotropy in single crystals 2=18852
- X-ray spectra, M-bands 3=9593
- X-ray spectrographic study 0=13469
- Ga^{71}, Ga^{69}, strength fn., neutron scatt., resonance parameters, spin var., calc. 4=28036
- GaII, thermodynamic properties 1=11527
- Ga^{3+}, e.s.r. in $LaAlO_3$ 3=11112
- Ga^{3+}, quadrupole antishielding factor 3=12772

Gallium compounds
- gallates, garnet, Yb^{3+}, Nd^{3+} magnetization process, high temp. var., calc. 4=20517
- laser junction fabrication 4=24920
- luminescence and photoconductivity 1=3861
- rare earth, gallates, susceptibility, 300-1500°K 3=6693
- semiconducting cpds., solubility in liq. Ga 3=21333
- alloys, hard, for bonding thermocouples into samples 0=14360
- alloys, superconductivity 3=16873
- Ga arsenides, X-ray study, lattice periods 3=20836

Gallium compounds—contd

Ga arsenoselenides, Hall and thermoelec. effects, 500-1000°K 1=3766
Ga ferrite garnet, magnetization, in pulsed fields 4=4373
halides, dissociation energies 1=17365
Ga halides, molecular structure 0=15774
(Ga, In) As alloys, disordered, lattice thermal cond. 3=25207
Ga oxide anodic films, i.r. absorpt. study 4=23566
Ga-substituted Fe_3O_4, mag. props. 1=12529
GaAs, absorption edge, press. sepend. 0=4408
GaAs, absorpt. edge, var. with compensation, meas. 4=30681
GaAs, absorption, light, and electron effect mass, Fermi energy 3=23070
GaAs, acceptor behaviour of Mn 2=14553
GaAs, acoustic excitation, nonlinear 3=17651
GaAs, Ag diffusion and solubility 4=1512
GaAs alloy diodes, V—A curves 1=12452
GaAs, for alpha ray detection, n-type, high resistivity 4=9013
GaAs, amorphous, short-range order 0=14048
GaAs, amphoteric behaviour of Ge in 2=16721
GaAs, atomic heat, 12-273°K 3=12928
GaAs, band structure calc. 4=25899
GaAs, band structure and electron transport 1=1073
GaAs, band structure and transport props. 2=23106
GaAs band structure and transport props. 1=17742
GaAs, behaviour of Li, rel. to Zn and Te doping 3=10818
GaAs, carrier concentration meas. 3=17878
GaAs, carrier lifetime by PEM and PC voltages 2=23389
GaAs, conduction pulses by γ-ray bombard., use for γ-spectroscopy 0=17287
GaAs, contamination during growth 2=10801
GaAs, contamination by quartz 3=1274
GaAs, crystal dislocations, Li precipitation 4=22587
GaAs, crystal growth using carbon boats 1=14998
GaAs, crystal growth, in quartz boats 2=19049
GaAs, crystal growth from vapour phase 2=10793
GaAs crystal habits, grown from vapour phase 2=21462
GaAs, crystal-pulling furnace 1=14994
GaAs, crystals growth 0=18312
GaAs, crystal growth from melt with different seed orientations 4=7553
GaAs, crystal growth, reduction of Si contamination 3=13416
GaAs, crystallographic orientation, light figures method 4=2011
GaAs, current carrier scattering and spectrum energy 1=17730
GaAs current and Hall coeff. rel. to elec. fld, 4°-30°K 3=10813
GaAs, current saturation at 77°K, optical phonon effect 4=17392
GaAs, current—voltage characteristics 3=17876
GaAs, Debye temp., neutron scatt. data 3=25201
GaAs, defects prod. by Li 3=8423
GaAs, degenerate p-type, i.r. absorption edge 2=8528
GaAs density of 3 samples 3=13392
GaAs diamagnetic susceptibility 3=18058
GaAs diffused junctions, recombination spectra, and phonons, 4°K 4=13078
GaAs, diffusion of Cd 1=6111
GaAs, diffusion of Cd, rel. to dislocations 4=9986
GaAs, diffusion of Cd, In, interstitial—vacancy mechanism 4=12792
GaAs, diffusion of Cd and Zn in 0=9918
GaAs, diffusion of 14 atoms, review 4=22612
GaAs, diffusion of Li, solubility and elec. behaviour 2=18599
GaAs, diffusion of Sn 1=12401
GaAs, diffusion of Sn and Se, meas. 3=22809
GaAs, diffusion of Zn, interstitial—substitutional 3=20225
GaAs, diffusion of Zn from vapour 1=17565
GaAs diode laser, impurity states 4=24877
GaAs diode lasers, i.r. output, angular distrib. 4=19303
GaAs diode, light modulation at 200 Mc/s 3=5895
GaAs, diodes, maser, electroluminescence, mag. fields, shift, 90 kG 3=20542
GaAs diodes, photon emission, refrigeration 4=10082
GaAs diodes, recombination radiation, depend. on current 3=13091

Gallium compounds—contd

GaAs, dislocation det. by etching 2=18588, 23196
GaAs, dissociation pressure 3=25815
GaAs, distribution coeff. of Zn 1=15143
GaAs, doped, fluorescence spectra, 77°K 3=8617
GaAs, doped, i. r. absorption and fluorescence 4=10175
GaAs doped with Se, Te, Zn and Cd, elec. props. and lattice parameters 4=26045
GaAs, doping behaviour of Se, model 3=12942
GaAs, e.s.r. of Fe, meas. 3=11113
GaAs, e.s.r. of Fe, quasiforbidden transitions 4=1879
GaAs, e.s.r., 4.2°K 4=4406
GaAs, e.s.r. of Zn, Cd 4=7338
GaAs, effect of As pressure on Ge doping 0=20915
GaAs, effect of Cu precipitation 0=18039
GaAs, effect on elec. ad photoelec. props. of 1 MeV electrons 4=25984
GaAs, effect of Mg impurity on elec. props. 1=14466
GaAs, effect of polarity on etching 0=6339
GaAs, effective electron mass, from Faraday effect, i.r. 3=17986
GaAs, effective electron mass by i.r. Faraday effect 0=7872
GaAs, elastic consts., low-temp. 2=18977
GaAs, elastic wave propag. 2=1220
GaAs, elec. breakdown hysteresis, of lasers 4=20380
GaAs, elec. cond. and Hall const., 2-600°K 1=14467
GaAs, elec. cond. and viscosity, at and above m.pt. 2=21918
GaAs, elec. cond. and viscosity, at and above m.pt. 3=5448
GaAs, elec. props. of Li 2=18598
GaAs, elec. props. 1.8°-300°K 3=10814
GaAs, electrical activity of Cu in, 600-1000°C 4=15536
GaAs, electroluminescence, i.r., effect of Cu impurities 4=7184
GaAs, electro luminescence, injection, polarization 3=23120
GaAs electroluminescent diodes, antireflection films 4=7205
GaAs, electroluminescent diodes with negative resist. 4=26079
GaAs, electro-optical effect, 900 kc/s 3=23051
GaAs, electro and photoluminesc. meas. 4=4297
GaAs, electron concentration rel. to Si addition 2=23386
GaAs, electron density distribution 1=12638
GaAs, electron effective mass, depend. on density 3=17885
GaAs, electron effective mass, rel. to temp. and doping 1=2414
GaAs electron emission, high-field 3=9827
GaAs, electron and hole scattering 3=17884
GaAs, electron-irrad., annealing behaviour 2=21005
GaAs, electron irrad., lattice atom displacement in n-type 4=22646
GaAs, electron transfer 3=20044
GaAs, electronic band structure 1=19735
GaAs, emission line narrowing, rel. to exciton binding 3=15659
GaAs, energy-band structure 1=14455
GaAs, energy-band structure 1=17705
GaAs, energy-level model 2=2163
GaAs, epitaxial films, vapour phase reaction 3=11239
GaAs, epitaxial vapour growth on Ge 2=8801
GaAs Esaki diodes for mm-wave region 1=11317
GaAs Esaki diodes, rapid impurity diffusion 4=17504
GaAs Esaki diodes, spot noise meas. 4=26080
GaAs, etch pits 0=11623
GaAs, etching of dislocations 4=1497
GaAs, evaporation, mass spectrometric study 1=19672
GaAs, exchange correction to binding energy 4=28425
GaAs, exciton scatt. mechanisms 2=23452
GaAs, Faraday effect 4=17565
GaAs, Faraday rotation at photon frequencies below energy gap 1=17740
GaAs films, epitaxial, thickness meas. 4=7707
GaAs, films on GaP, p—n heterojunctions, photoelec. props. 4=26070
GaAs films, obliquely evap., photovoltaic effects 4=17530
GaAs films, preparation 3=17875
GaAs films, prep., optical and elec. props. 1=20668
GaAs films, prep., optical and photoelec. props. 4=22857
GaAs films, vapour-deposited on Ge, structure 4=13681
GaAs, floating zone refining 4=29054

Gallium compounds—contd
- GaAs, floating-zone refining apparatus 0=18317
- GaAs, free carrier cyclotron resonance, Faraday rotation and voigt double refraction 1=17741
- GaAs, α-Ga_2O_3 crystallite impurities 2=12428
- GaAs—GaP diodes, injection electroluminescence 4=1772

GaSb, band structure, reflectivity data, 0.5-5 eV 1=1143
GaSb band structure and transport props. 1=17742

Gallium compounds—contd
GaSb, conduction band study 0=2894
GaSb, crystal structure, atomic 4=4606
GaSb, current carriers, effective mass, and var. elec. props., 200-400°K 0=6119
GaSb, Debye temp., neutron scatt. data 3=25201
GaSb diamagnetic susceptibility 3=18058
GaSb, diamag. susceptibility, electron density 2=14764, 16888
GaSb diodes, radiative recomb. effects 3=17913
GaSb, dislocation density and velocity 2=21033
GaSb, distribution coeffs. of impurities 1=7647
GaSb, effect of polarity on etching 0=6339
GaSb, elastic constants 3=8751
GaSb, elastic constants by c.w. resonance technique 0=13897
GaSb, electron effective mass meas. 3=12936
GaSb, electron transfer 3=20044
GaSb, electronic density distrib. and atomic scatt. factors 1=11560
GaSb, energy gap width, formula and expt. 2=6431
GaSb exciton and impurity absorption and emission 3=10948
GaSb, Faraday effect 4=17565
GaSb, Faraday rotation at photon frequencies below energy gap 1=17740
GaSb films, undoped, sputtered on glass, structure and elec. props. 3=3357
GaSb and Ga—Sb distribution coeffs., Zn^{65} 4=4072
GaSb, i.r. lattice refl. spectra analysis 2=18844
GaSb, with In, Sb, Se, Te diffusion impurities, elec. props., −120° to +680°C 0=4359
GaSb, interband Faraday effect 3=8586
GaSb, mag. susceptibility 0=11803
GaSb, n-type, band structure by pressure expts. 1=17735
GaSb, n-type, doped with Se or Te, elec. cond. and Hall coeff. 1=3767
GaSb, n-type, transport props. 3=10819
GaSb, Nernst effect with electrons in 2 superposed bands 1=14387
GaSb, nuclear magnetic resonance 0=11954
GaSb, observation of polarons and phonons during tunnelling 0=13628
GaSb, (110) surface, electron diffraction obs. 4=23555
GaSb, (111) and (11$\bar{1}$) surface structr. and adsorption charac. 2=23908
GaSb, optical absorption 2=14679
Ga Sb, optical, elastic and piezoelectric props. 1=899
GaSb, optical energy gap, temp. depend., of alloys with InSb 1=19996
GaSb, p-n junction delineation by etching 2=10508
GaSb p—n junction, injection electroluminescence 3=15721
GaSb, p-type, piezoresist. 77°-350°K 4=12892
GaSb, phase transition due to pressure 2=16704
GaSb, phonon assignments, optical and acoust. 4=3981
GaSb, phonon scatt. from thermal cond. meas. 4=15411
GaSb, photoconductivity, osc. with photon energy, phonon mechanism 4=17529
GaSb, piezoersistance, pressure depend., n-type 0=9977
GaSb, polar scatt. of carriers, calc. 1=3768
GaSb, reduction of high acceptor conc. 4=23339
GaSb, reflection spectra rel. to band struct. 3=925
GaSb reflectivity spectra, visible and u.v., fine structure and temperature dep. 3=10909
GaSb, reflectivity spectrum fine structure in near u.v. 3=4961
GaSb, reflectivity, visible at 300°K, evidence for spin-orbit interaction 0=18120
GaSb, Se-doped, donor level above prin. conduction band edge 2=2162
GaSb, semiconducting energy band structure 1=17733
GaSb, semiconducting props. 2=18703
GaSb, Shubnikov-de Haas effect, calc. 4=25881
GaSb, specific heat, 20-700°C 3=22659
GaSb, sputtering 4=30598
GaSb [III] surface characteristics 1=20657
GaSb, surface structure and props. 1=4078
GaSb, thermal expansion coeffs. 1=4970
GaSb, thermal expansion, 20°-340°K 4=1404
GaSb, thermoelec. props. at m.p. and liquid state 0=624
GaSb, thermoelec. props., −190 to +600°C 0=623
GaSb, thin films, refractive index rel. to temp. 2=23518
GaSb tunnel diodes, reversible degradation effects 2=21173

Gallium compounds—contd
Ga—Sb system, three-phase line, pressure—temp. projection 4=16290
GaSb–AlSb system, study 0=6381
GaSb–Ga_2X_3 alloys, (X = Se, Te), solid soln. ranges, optical energy gaps, and Hall coeff. 4=28997

Gamma-rays—contd
number emitted in (n,γ) resonance capture 0=11439
ω and η mesons decay 4=3470
$1f_{7/2}$ nuclei, mag. dipole transitions, seniority selection rules 4=3596
opposite circ. polarization in mag. field, equality of vels. 3=12434
$(p, p'\gamma)$, (p,γ) and $(p, n\gamma)$, identification 0=20431
from particle accelerators, intensity stabilization 0=19859
penetration of Pb collimator plate 0=20097
from π-meson decay 1=8476
from π with nucleons, at 7 GeV, in propane bubble character 3=7901
plane polarization meas. method 4=17082
point source, in atmosphere, radiowave scatt. on 4=27663
point sources, e.m. simulation for calc. 3=573
polarization, from α—nucleus inelast. scatt. 4=28061
polarization, circ., by birefringence in crystals 3=14937
polarization, circular, of internal bremsstrahlung accompanying β-decay 0=11362
polarization, circular, meas. of high-energy beams 3=5976
polarization, circular, Mössbauer analysis, nuclear γ's 4=17084
polarization, circular, in (n,γ) reactions 1=13825
polarization in direct nucl. reactions rel. to nucleus polarization 0=11397
polarization—directional correlations, $\gamma-\gamma$, graphical analysis 1=5866
polarization, in (n,γ) slow-neutron reactions 0=9594
polarization, from $Si^{30}(p,\gamma)P^{31}$, from photoproton tracks in emulsion 3=8088
polarization, from $Si^{30}(p,\gamma)P^{31}$ reaction 0=7567
positronium decay in Teflon, $\gamma-\gamma$ coincidence, delay meas. 3=4380
production by 500 kV ion accelerator 1=16445
prod., n capture, possible source of variable energy and high resolution 3=17232
production, by neutron capture, in steel 2=8045
production from 1-10^3 GeV N—N interactions 3=4366
production from proton accelerator 2=2069
production system for variable energy 3=4370
pulse production device ~ 1 msec 3=14939
quasimonoenergetic source, use of Ba^{133} 3=24680
radiative widths in (p,γ) reactions $22<A<35$ 4=19773
rare-earth nuclei, even, γ-stability theory 2=5778
recoil products, separation 3=6929
reflection, albedo of Co^{60} and Au^{198} γ-rays of various materials 1=16736
resonances in $Na(p,\gamma)$ and $P(p,\gamma)$ reactions 1=5915
rotational transitions, E2-type, probabilities 0=20401
self-absorbing source 0=11329
shielding of rectangular sources 1=7331
from solar flare 0=8399
source, Co^{60} γ-irradiator, dose distrib. in working chamber 4=1034
source with improved homogeneous field 0=1263
source, props. of shut-down reactor 3=25014
source, radiation field 0=7488
source, 2 kC Co^{60} unit at Boris Kidrich Inst. (Yugoslavia) 2=18092
sources, cylindrical self-absorbing, inside intensity of unscattered rays 2=3302
sources, elongated, simulation 4=3375
sources, elongated, simulation 4=21819
sources, monochromatic 4=21820
sources, quasi-monoenergetic, Co^{60}, Cs^{137}, Se^{75}, Eu^{155} 2=5611
synchrotron prod. 4=11732
synchrotron radiation, regulation method 1=5515
from 3-quantum annihilation of electron pairs 3=24709
transitions, cross-sections of (d,γ) reactions 2=483
transitions detected by sum-coincidence method 2=10056
transitions in isomeric nuclei 1=633
two-quantum transitions of nuclei 2=14041
VVR-S nuclear reactor 2=6056
VVR-S reactor, flux meas., near horizontal channel 2=6049
VVR-S reactor, fluxes 2=8043
VVR-S reactor, soft spectrum 4=1150
variable energy beam, by Compton scatt. from Al, 3=14938
velocity constancy, by positron annihilation in flight 3=22098

Gamma-rays—contd
velocity, independence of source motion, test 4=18373
velocity meas. from moving π° source 4=27043
$AcC \rightarrow AcC''$, $\gamma-\alpha$ correl. and γ-polarization 2=12174
Ag^{110m} 0=9596

B^{11}, resonant scatt. from nuclear levels 2=1861
Bi, elastic, for neutron-capture γ-rays 4=3630
Bi^{209} 2=13999
C, albedos for Co^{60}, Cs^{137} and Cr^{51} sources on a thick plate 0=3945
C, cross-sections for low energy γ-rays 1=8695
C, cross-sections at 19-61 MeV 0=1433
C at 50-130 MeV 2=1860
C^{12} 2=13999
C^{12}, absorption meas. in giant resonance region 4=9476
C^{12}, resonance 2=419
C^{12}, resonant scatt. of bremsstrahlung 1=13763
C^{12}, resonant scatt. from nuclear levels 2=1861
on C^{12}, 17.22 MeV level 0=5770
Ca 2=13999
Ca^{40}, resonance 2=419
Cd^{111}, photoactivation to isomer 3=15111
on Cd^{114}, resonance scatt., rel. to 556 keV level lifetime 0=9507
Ce^{140}, reson. of La^{140} 159 keV γ's, and La^{140} lifetime 4=22103
Cs^{137} and Co^{60} point sources in Fe, radiation fields 4=6009
Cu, cross-sections for low energy γ-rays 1=8695
Cu, cross-sections at 19-61 MeV 0=1433
Cu, elastic, at ~1 MeV, meas. isolation 2=11920
Cu, at 1·17 and 1·33 MeV, small-angle coherent scatt. 1=8694
Cu, recoil-free non-resonant, 14 keV 2=16380
Cu^{65}, 1.114 MeV level, nuclear resonance fluorescence 4=25309
Cu^{65}, resonance scatt., levels lifetimes meas. 4=1019
Er, giant resonance, expt. and calc. 2=10086
Er, giant resonances 4=19745
Fe, albedo meas., 0.66 MeV 4=19467
Fe, albedos for Co^{60}, Cs^{137} and Cr^{51} sources on a thick plate 0=3945
in Fe, angular and energy distributions 1=5703
Fe, ang. and energy distrib. 3=14936
Fe, backscattering 1=13373
Fe, backscatt. spectra 2=7841
Fe, back-scatt., var. with thickness, angles 4=3371
Fe crystal, nuclear resonant elastic, Debye—Waller factor meas. 4=20167
Fe, from Cs^{137} unidirectional source, spectrum, ang. distrib. 4=9155
Fe, Delbrück, 17 MeV 2=22781
by Fe, multiple scatt. 3=12433
Fe plate, Compton scattering, as monochromatic source 3=4369
Fe^{56}, 0.845 MeV quanta 3=22303
Fe^{57}, coherent resonant recoil-free, using total refl. 4=3964
Fe^{57}, 14keV, interference between Rayleigh and nuclear reson. 4=17113
Fe^{57}, 14 keV, total reflection near nuclear anomalous dispersion 4=17115
Fe^{57}, Mössbauer scatt. cross-section 3=2366
Fe^{57}, recoilless resonance scatt. of 14.4 keV rays. parity conservation 1=602
Fe^{57}, resonant scatt. of 14.4 keV ray, interference with Rayleigh scatt. 1=601
H, γ-quanta, elastic at 247 MeV 2=3301
on H, 165-190 MeV, absolute cross-section 0=3996
H$_2$O, ang. and energy distrib. 3=14936
in He^3 liquid, frequency and ang. distrib. 1=16735
He^3 liquid, frequency and ang. distrib. 2=22471
Hf^{177}, resonances 1=17072
Hf^{177}, resonances, level widths 2=14071
Hg atoms, polarization, calc. 0=17692
Hg, elastic, for neutron-capture γ-rays 4=3630
Hg^{202} (n, γ) γ self absorpt. and 5.4 MeV level meas. 4=6349
Ho, giant resonance, expt. and calc. 2=10086
Ho, giant resonances 4=19745
In^{115}, inelastic, cross-sections 2=1862
In^{115}, photoactivation to isomer 3=15111

Gamma-rays—contd
scattering—contd
Li, resonant scatt. for variable energy 3=4370
Li^6, resonant scatt. from nuclear levels 2=1861
Li^7, meas. of mean lifetime of first excited state 3=4564
on Li^7, resonance scattering 1=3434
LiF diffr. maxima, meas. using Mossbauer source 4=13570
Mg 2=13999
Mg, resonant scatt. 2=420, 1861
Mg, resonant, ≤ 12 MeV, energy levels 3=6166
Mg, 10.15 MeV level, level width 0=17621
Mg^{24} γ-rays, resonance scattering 0=7534
Mg^{24}, resonant scatt., with excitation 0=9661
Mg^{24}, resonant scatt. of bremsstrahlung 1=13763
N^{14}, resonant scatt., lifetime of first excited state 1=664
Na^{23}, meas. of mean lifetime of first excited state 3=4564
Nd^{144}, resonant elastic cross-section 4=6233
Ni^{60}, resonance scattering, effect of recoil nuclei collisions 0=20338
Ni^{60}, resonant scattering 0=13215
O, cross-sections at 19-61 MeV 0=1433
O^{16}, resonant scatt. from nuclear levels 2=1861
P^{31} 2=13999
Pb, albedo meas., 0.66 MeV 4=19467
Pb, albedos for Co^{60}, Cs^{137} and Cr^{51} sources on a thick plate 0=3945
in Pb, angular and energy distributions 1=5703
Pb, backscattering 1=13373
Pb, backscatt. spectra 2=7841
Pb, back-scatt., var. with thickness, angles 4=3371
Pb, Delbrück scattering 2=22782
Pb, Delbrück, 17 MeV 2=22781
Pb, elastic, for neutron-capture γ-rays 4=3630
Pb, elastic, 9 MeV, differential cross-section 4=6316
Pb, inelastic, by bound electrons 2=18090
Pb, at 1.17 and 1.33 MeV, small-angle coherent scatt., 1=8694
Pb, at 100 MeV, small-angle scatt. 0=9663
Pb, polarization ~1 MeV, reconciliation with theory 4=22105
in Pb, 662 keV, energy and angular distrib. 0=13259
Pb, 662 keV γ, inelast. scatt. by K electrons 2=1967
Pb^{208}, and 5.2 MeV level meas. 4=6349
Pb^{208}, 7.28 MeV, from Fe^{56}(n,γ)Fe^{57} 4=12197
Pt, recoilless Rayleigh scattering in, using Mössbauer effect 0=11560
Re^{187}, resonance scatt. 4=25369
Rh^{103}, inelastic, cross-sections 2=1862
Rh^{103}, inelastic, at 5·9–25·5 MeV, cross-section 1=19436
Sb^{123}, resonance scatt. 4=25369
Se^{76}, study of excited level lifetimes 0=13143
Si 2=13999
Si, 11.40 MeV level, width 0=17621
Si, resonant scatt. 2=420, 1861
Si^{28}, rel. to nucleus energy levels 1=16995
Sn, backscattering 1=13373
Sn, backscatt. spectra 2=7841
Sn, elastic, at ~1 MeV, meas. isolation 2=11920
Sn^{116}, resonance scatt. 3=639
Sn^{117}, 161 keV resonant scatt. 2=3527
Ta, Delbrück, 17 MeV 2=22781
Ta, elastic, for neutron-capture γ-rays 4=3630
Ta, giant resonances 4=19745
Ta^{181} 2=13999
Te^{124}, resonance scattering, 608 keV excited state 1=16974
Te^{125}, resonance, (Mössbauer effect) 2=13973
Te^{125}, resonance (Mössbauer effect) 3=6145
Ti^{48}, resonance scatt., levels lifetimes meas. 4=1019
Tl^{203}, resonance fluorescence from 279 keV level 3=629
Tl^{203}, resonance scatt. from 279 keV level, life-time meas. 1=7357
U, Delbrück, 17 MeV 2=22781
U, elastic, 9 MeV, differential cross-sections 4=6316
U, at 100 MeV, small-angle scatt. 0=9663
V^{51}, resonance scatt. and 321 keV level lifetime 0=11389
W, at 100 MeV, small-angle scatt. 0=9663
Xe^{131}, 638 keV resonant scatt., level lifetime 2=387
Xe^{132}, 673 keV resonant scatt., level lifetime 2=386
Y^{89}, inelastic, cross-section 2=1862

Garnets
See also Ferrites (Heading introduced in 1961).
crystal field splitting in Fe^{2+} silicate garnets 1=6066
crystal field of Yb^{3+} in garnets 4=25806
diamagnetic, rare earth ion e.s.r. 3=15937
elastic constants-183° to 300° C 4=7427
ellipsoidal samples, resonant frequency shift 1=6400
ferrimagnetic, with high initial permeability 2=2289
ferrimagnetic resonance in disks at L-band freqs. 4=23038
ferrites, hydrothermal etch figures 4=2017
ferro- and antiferromagnetism, Russian work, review 3=3092
ferromagnetic, solid solution, saturation mag., effect of short range order 3=20616
loss mechansim, slow-wave u.h.f. phase shifters 2=13679
low-magnetization, high-power characteristics 1=6399
low-temperature mag. props. 1=6365
magnetic and crystallographic data of ferrimagnetic garnets containing Sb^{5+} 4=13233
magnetic and crystallographic data for ferrimagnetic garnets containing V^{5+} 4=14234
magnetic, indirect spin coupling, theory 3=5021
magnetic props. rel. to prep., comp., temp. and applied field freq. 4=26332
magnetometer for saturation magnetization, anisotropy consts. 2=1553
microwave, hybrid, temp. stable 2=12747
optical Faraday effect in r.f. field 1=1145
orientation using ferrimagnetic resonance 1=14782
preparation temp. reduction by Bi substitution 3=23191
rare earth Al garnets, mag. props. of rare earth Kramers ions 4=26342
rare-earth garnets, coercive force, temp. anomaly 1=20145
rare-earth, energy levels 2=16629
rare-earth iron garnets, crystal chemistry 3=3282
rare earth Fe, exchange fields 3=1159
rare-earth Fe, far i.r. resonance spectra 2=12713
rare-earth iron garnets, far i.r. spectra and ferrimag. resonance 3=8597
rare-earth iron, Fe^{57} n.m.r. in hyperfine fields 3=3196
rare-earth iron garnets, ferrimag. resonance freq., theory 1=11467
rare-earth iron garnets, internal field at rare-earth nuclei 1=9039
rare-earth iron garnets, low-lying spectrum, theory 1=14611
rare earth Fe garnets, magnetic exchange field 4=28848
rare earth iron garnets, mag. moments of ions 3=6725
rare-earth Fe, magnetocrystalline anisotropy 2=12710
rare-earth Fe, n.m.r. of Fe^{57} nuclei 2=6703
rare-earth, ferrimag. props. and crystal structure 2=4242
rare-earth ferrites, crystal growth 1=11539
rare-earth, ferrites, structure, mag. and elec. props. 2=16920
rare earth Ga garnets, mag. props. of rare earth Kramers ions 4=26342
rare-earth ion ferrimagnetic properties, theory 3=13281
rare-earth, unit cell dimensions, Curie temp. 2=8650
rare earth and Y garnets, lattice constant variation with composition 1=10171
review 1=3911
spin—lattice relaxation of paramag. ions 4=26399
spin waves spectrum 2=14807
structures and magnetic properties 3=15867
substituted rare earth garnets, statistics of super-exchange interactions 1=7766
Al_2O_3. 3CaO. $6H_2O$, position of H atoms 4=4594
$\{Bi_{3-2x}Ca_{2x}\}[Fe_2](Fe_{3-x}V_x)O_{12}$, single-crystal growth 4=29043
Co-doped, optical absorption 2=4142
Fe—Y—La, prep. and props. 4=26679
Gd^{3+} e.s.r., rel. to GdIG anisotropy 4=26398
$Dy_3Al_5O_{12}$, antiferromag. ordering 4=20566
DyFe garnet, hyperfine interact. of 2^+ state of Dy^{160} 3=1155
DyFe garnet, hyperfine interactions in ground and 1st excited states, from Dy^{161m} γ-ray absorption 1=11454

Garnets—contd
DyFe garnet, internal fields at Fe nuclei in a and d lattices, by Mössbauer absorption 1=7769
DyFe, n.m.r. of Fe^{57} 2=4285, 16939
Dy Fe garnet, Zeeman splitting, 85° and 300°K 3=994
Dy–Yt, magnetic properties 1=20144
Er garnets, Faraday effects, i.r., rel. to ferromag and exchange resonances 3=918
Er ferrite, absorption spectra (15400 cm^{-1}), 4°-293°K 1=10100
ErFe garnet, exchange resonance, far i.r. 3=1166
ErFe, ferrimagnetic resonance 1=11468
Er—Fe, ferrimagnetic resonance 1=12556
ErFe, n.m.r. of Fe^{57} 2=16939
Eu garnets, Faraday effect i.r., rel. to ferromag. and exchange res. 3=918
Eu ferrite garnet, exchange interactions, and magneto-optical effects 1=19957
Eu ferrite, exchange interactions and magneto-optical effects 2=23535
EuFe garnet, ferrimagnetic resonance 1=20186
Eu–Fe garnet, ferrimagnetic resonance 1=20187
$Eu_3Fe_5O_{12}$, ferrimag. reson., -196° to +300°C 1=12555
EuFe, mag. hyperfine interaction and Sm^{3+} electronic relaxation 2=12647
Eu ferrite garnet, magneto-optical props. of Eu^{3+} 4=17563
EuFe, n.m.r. of Fe^{57} 2=16939
Fe, anisotropy from rare earth ions 2=12716
Fe, energy levels 2=16629
Fe garnet, local mag. fields, measured using Mössbauer effect 1=6248
γ Fe garnet parametric amplifier 1=5582
Fe, rare-earth ion relaxation in ferrimag. resonance 3=1592
$(5-x)Fe_2O_3.xAl_2O_3.2Gd_2O_3.Er_2O_3$, magnetic props. rel. to structure 1=11453
$(5-x)Fe_2O_3.xAl_2O_3.2Gd_2O_3.Y_2O_3$, magnetic props. rel. to structure 1=11453
$3Fe_2O_3$, $2Al_2O_3$, $3Y_2O_3$ effect of temp. on resonance line 4=23039
$(5-x)Fe_2O_3.xCr_2O_3.2Gd_2O_3.Er_2O_3$, magnetic props. rel. to structure 1=11453
$(5-x)Fe_2O_3.xCr_2O_3.2Gd_2O_3.Y_2O_3$, magnetic props. rel. to structure 1=11453
Gd, investigation near Curie pt. 1=10172
$Gd_3X_5O_{12}$, ($X = Al^{3+}$, Ga^{3+}) paramag. susceptibility, 20° to 1.5°K 3=1052
Gd—ceric earth mixed, cryst. and mag. props. 3=3125
Gd ferrite anomalies, in low-temp. region 2=23682
Gd ferrite garnet, magnetic anomalies, in low-temp. region 1=20123
$Gd_3Al_3Fe_2O_{12}$, ionic distrib. 1=20562
GdFe, chem. faults and dislocations, etching method 2=23814
GdFe, mag. structure at low temps. 3=3196
GdFe, n.m.r. of Fe^{57} 2=16939
GdFe garnet, Nd-substituted, mag. and crystallographic study 1=12542
GdFe garnet, susceptibility below the Néel pt. 1=14746
Ge, crystal chemistry 2=2369
Ho garnet, Faraday effect, i.r. rel. to ferromag and exchange resonances 3=918
Ho, magnetic structure 1=2482
$Ho_3X_5O_{12}$ ($X = Al^{3+} Ga^{3+}$), paramag. susceptibility, 20° to 1·5°K 3=1052
Ho ferrites, i.r. Faraday effect and absorption 2=685
HoFe, n.m.r. of Fe^{57} 2=16939
LuFe, high temp. susceptibility, exchange interactions 2=12715
LuFe, n.m.r. of Fe^{57} 2=16939
LuFe garnet, uniaxial anisotropy 1=6366
Nd, in substitutional YIG, ferromag. alignment 1=12543
NdYFe garnet, saturation magnetization 1=14747
SmFe, n.m.r. of Fe^{57} 2=16939
$Tb_3X_5O_{12}$, ($X = Al^{3+}$, Ga^{3+}) paramag. susceptibility, 20° to 1.5°K 3=1052
Tm, paramag. reson. and relaxation of Fe impurities 4=20593
$Tm_3X_5O_{12}$ ($X = Al^{3+}$, Ga^{3+}) paramag. susceptibility, 20° to 1·5°K 3=1052
TmFe, ferrimag. resonance 2=18938
TmFe, n.m.r. of Fe^{57} 2=16938

Garnets—contd

- Y garnet, excitation of ferrimagnetic resonance by pulsed mag. field 1=14783
- Y garnet, Faraday effect, i.r. rel. to ferromag and exchange resonances 3=918
- Y, Faraday effect, transmission and reflection spectra 1=7704
- Y garnet, ferrimagnetic resonance 1=20184
- Y, gyromagnetic resonance, effect of method of prep. 3=8699
- Y, investigation near Curie pt. 1=10172
- Y, microhardness 2=21449
- Y, with rare earth impurities, Fe^{57}, nucl. relaxation 2=6705
- Y-, single crystals, growth by modified pulling technique 4=13549
- Y Al garnet, as acoustic transducer 3=25601
- YAl garnet, Cr^{3+} ground state, zero-field splitting 1=14806
- YAl, e.p.r. of Gd^{3+} 2=12714
- YAl garnet, growth of large single crystals 1=10235
- Y$_3$Al$_3$Fe$_2$O$_{12}$, ionic distrib. 1=20562
- YAl, YGa and YGd garnets, Nd-doped, laser oscillations 4=19309
- Y, Al, Fe, subsidiary absorpt. effects 2=12746
- Y—Eu, crystalline, mag. props. 3=3124
- YFe acoustic losses 2=12688
- YFe garnet, acoustic-resonance, extremely low loss 1=14171
- YFe garnet, Al-substituted, ferrimag. resonance 1=14781
- YFe garnet, anisotropy calc., Fe^{3+} in YGa garnet 1=6362
- YFe garnet, anisotropy energy 1=2496
- YFe, chem. faults and dislocations, etching methods 2=23814
- YFe, containing impurities, Fe^{57} relaxation calc. 2=6704
- YFe, containing Nd, Pr, La ions, unit cell dimensions 1=20567
- YFe, crystal orientation from etch patterns 2=23815
- YFe garnet, crystal structure, refinement 3=8834
- YFe garnet, degenerate spin-wave instabilities, suppression 3=1164
- YFe garnet, domain wall mobility 1=6367
- YFe garnet, effect of In substitution on permeability 1=6372
- YFe garnet, exchange interactions 4=28849
- YFe garnet, exchange resonance, for i.r. 3=1166
- YFe garnet, face morphology 4=10458
- YFe garnet, Fe^{57} h.f.s. from Mössbauer effect, internal fields 1=9036
- YFe, Fe^{57} magnetic resonance and relaxation 1=7804
- YFe, Fe^{57}, n.m.r. enhanced 2=16939
- YFe, Fe^{57} nuclear resonance 1=20263
- YFe, ferrimagnetic resonance 1=11468
- YFe ferrite, ferrimagnetic resonance 2=18934
- YFe garnet, ferrimag. resonance, effect of Tb 1=20185
- YFe garnet, ferrimag. resonance at high power 1=12554
- YFe garnet, ferrimag. resonance, subsidiary absorption 1=9049
- YFe, ferrimagnetic resonance width 2=18936
- YFe garnet, ferro-acoustic resonance 3=11129
- YFe, ferromag. relaxation 2=18931
- YFe garnet, ferromag. relaxation, intrinsic & uniform precession 3=1163
- YFe garnet, ferromag. relaxation at low temp. 1=14777
- YFe garnet, ferromag. relaxation at low temp., theory 1=7761
- YFe garnet, ferromagnetic resonance 1=20181
- YFe, ferromag. resonance, crystal field effects 2=21353
- YFe garnet, ferromagnetic resonance rel. to induced anisotropy 3=8702
- YFe garnet, ferromag. reson., magnetostatic modes instability 4=26361
- YFe, ferromag. resonance magnon distrib. 2=12801
- YFe, ferromag. reson. mechanisms 3=3154
- YFe garnet, ferromagnetic resonance, rel. to r.f. magnetic field 3=8701
- YFe garnet, ferromag. resonance, subsidiary absorption suppressed by modulation techniques 1=7779-80
- YFe, Ga-substituted, n.m.r. of Ga^{69} and Ga^{71} 4=28897
- YFe, growth by floating zone technique 1=6499
- YFe, growth on seed from molten BaO–xB$_2$O$_3$ 2=12743

Garnets—contd

- YFe high temp. susceptibility, exchange interactions 2=12715
- YFe garnet, hyperfine Zeeman splitting 85° and 300°K 3=994
- Y ferrites, i.r. Faraday effect and absorption 2=685
- YFe, impurities occluded during crystal growth 1=14986
- YFe garnet, internal fields at Fe nuclei in a and d lattices, by Mössbauer absorption 1=7769
- YFe, low-temp. thermal conductivity 2=10344
- YFe, garnet, magnetic anisotropy 1=6366
- YFe garnet, mag. anisotropy at O°K 1=6363
- YFe, mag. component due to spin waves 2=16924
- YFe garnet, mag. effects of In and Ga substitutions 3=1048
- YFe garnets, magnetization and resonance props. 3=6721
- YFe magnetization, temp. depend. 2=12686
- YFe in magnetodynamic mode ferrite amplifier 2=13680
- YFe garnet, magnetostriction 1=14748
- YFe, microwave acoustic losses, temp. depend. 2=10322
- YFe, microwave generation, second harmonic 1=14751
- YFe garnet, microwave permeability 1=14778
- YFe monocrystals, ferrimag. resonance 2=10687
- YFe garnet, n.m.r. of Fe^{57} 1=7805
- YFe, n.m.r. freq., anisotropy 3=3205
- YFe garnet, Nd and La substituted, absolute saturation magnetization and remanence 3=1047
- YFe, Nd-substituted, elec. and mag. props. 2=21339
- YFe garnet, Nd-substituted, ferrimagnetic properties 3=25546
- YFe garnet, Nd-substituted, mag. and crystallographic study 1=12542
- YFe garnet, nonlinear damping losses 1=12550
- YFe, nonlinear response 1=6409
- YFe, pure and substituted, Curie temp. meas. 1=14749
- YFe garnet, rare earth doped, anisotropy, 4·2° to 1·5°K 3=1049
- YFe, rare-earth doped, ferrimag. res. linewidth 2=18939
- YFe garnet, rare earth doped, ferrimag. res. line widths 3=1174
- YFe garnet, rare-earth-doped, ferrimag. resonance and spec. ht., theory 1=14611
- YFe, with rare-earth ions, mag. moments 2=2288
- YFe, rare-earth substituted, spinwave, uniform precession linewidths 2=12709
- YFe garnet, relaxation mechanisms in ferromag. resonance 1=7781
- YFe, resonances, in waveguide, effect of freq. modulation 2=6685
- YFe garnet, Sb^{5+} substituted for Fe^{3+}, mag. moment var., Curie temp., and crystallography 4=26344
- YFe single-crystal disk, ferrimag. resonance 1=6405
- YFe, specific heat, 1·5–4·2°K 1=7539
- YFe garnets, spin wave linewidth, rel. to subsidiary resonance suppression 3=18119
- YFe, spin-wave propagation 2=21338
- YFe garnet, spin-wave spectrum anisotropy 1=6387
- YFe garnet, strain in crystals, resonance and optical study 1=14865
- YFe garnet, subsid. resonance in coincidence region 1=2493
- YFe, substitution of divalent transition metal ions 2=12690
- YFe, substitution of Mn^{2+}, Fe^{2+} and Ni^{2+} 3=3129
- YFe, susceptibility in strong r.f. mag. field 2=6661
- YFe, Tb doped, ferrimag. resonance 2=12712
- YFe, terbium substituted, ferrimag. reson. 2=14820
- YFe garnet, torque measurements 1=6364
- YFe, u.s. loss, 10 Mc/s 2=23066
- Y$_3$Fe$_2$(FeO$_4$)$_3$, crystallization 1=14966
- Y$_3$Fe$_5$O$_{12}$ crystal growth 3=20801
